Software

ElcoMaster® data management software

Surface Preparation

Cleanliness, comparators & surface profile

Moisture

Digital moisture measurement

Wet Film Thickness

Combs, wheels & pfund thickness

Dry Film Thickness

Digital, mechanical & destructive coating thickness

Material Thickness

Ultrasonic thickness gauges

Inspection Kits

Powder, protective, automotive & industrial kits

Appearance

Gloss, haze, DOI & colour

Dispersion & Density

Fineness of grind, density cups & balances

Drying Time

Permeability & linear drying time recorders

Washability & Abrasion
Linear & rotary abraders

Hardness

Pencil hardness, clemen, shear & scratch testers

elcometer®

Climatic Conditions

RH, dewpoint & temperature

Oven Temperature Profile

Oven temperature data loggers

Powder Thickness

Non-contact powder gauge & powder combs

Adhesion

Cross hatch, pull off & push off adhesion

Pinhole & Porosity

Wet sponge, UV, DC & pulsed DC holiday detectors

Inspector's Accessories

Mirrors, microscopes & inspector's publications

Viscosity Cups

Dip cups & flow cups

Rotational Viscosity

Krebs & rotational viscosity

Film Application & Test Charts

Manual & motorised film applicators & leneta charts

Elasticity & Deformation

Mandrel bend & variable impact testers

Concrete Inspection & Metal Detection

Covermeters, half-cell & rebar locators

elcometer®

With a range of products specifically developed to meet the needs of the coatings industry, Elcometer is well positioned to provide you with the solution to your inspection requirements - whatever and wherever they might be.
For more than sixty five years Elcometer has been a world leader in the design, manufacture and supply of inspection equipment to the coatings, concrete and metal detection industry.

Ever since the first Elcometer gauge was manufactured in 1947, our philosophy has been to provide industry leading, innovative, high quality products; supported by a best-in-class customer experience at a competitive price. By concentrating on these core values, Elcometer has grown into a global network with representation in over 70 countries.
Our Values

- Pride; We are proud of where we work and the work we do
- Ownership; We take responsibility for what we do and how we do it
- Ethics; We treat our customers, suppliers and colleagues fairly and with respect
- Achievement; We believe that just enough is not enough
- Focus; We know that if it is not acceptable to us it is not acceptable to our customers
- Initiative; We are encouraged to identify opportunities for improvement and offer solutions

Quality is part of our culture

Elcometer's commitment to quality is reflected in our ISO 9001 Quality and ISO 14001 Environmental certifications.

It is the Company philosophy to integrate quality into all aspects of the product - whether it be the initial product design, the manufacture of our product or in our commitment to our customers.

Elcometer is committed to reducing its impact on the environment, including product manufacture, packaging, catalogue production and our waste management. All our products are lead and mercury free and, where required, CE and RoHS compliant.

Service and Support

Elcometer has over 150 Distributors around the world, all comprehensively trained on our products, providing a full after sales service and support within your region.

With the widest range of own manufactured products, Elcometer can provide a complete solution to all your inspection requirements.

Training

Elcometer offers first class training on all its products to all our customers either at your facility or at our state of the art training facility in Manchester, England. For more information please contact Elcometer.

Fit for Purpose

All Elcometer products are designed to comply with National and International Standards. We have a team of experts working with Standards bodies around the world, ensuring we have products fit for purpose, exceeding the demands of our customers.

In this catalogue, we have identified the latest National and International Standards - those in Orange are current and those in Grey have been superseded but are still recognised in some industries.

We continuously review our products against current and new Standards. For the most up to date list of Standards, visit our online catalogue which provides the latest information on all new, current and superseded Standards which our products can be used in accordance with.

Product Innovation

Elcometer continues to be a leader in product innovation for the Inspection Industries in both hardware and software design with a team of specialists dedicated to product development.

We are committed to continuously push the boundaries through our new product development programmes.

Product Index

Data Management Software

Coating inspection regimes require data to be collected on many of the parameters of **the coating process: surface profile, surface cleanliness, climatic conditions, film thickness** and adhesion. All of these inspections generate a large amount of data.

Elcometer have designed a series of data management software packages that will link directly with the data collection devices (gauges) and instantly produce professional reports, offering full traceability of the inspection proving compliance to the relevant standard being followed.

Our free software package, ElcoMaster® is the most flexible data management software on the market. Designed to meet the demanding needs of the quality inspector whilst offering the ultimate flexibility for managing data into 'projects' for ease of use.

Producing professional reports is easily achieved using the standard report templates within the software package or by using the customisation options to produce customer specific reports.

Making full use of data transfer technology - Bluetooth® and Cloud applications, Elcometer provides fast and efficien means of transferring and sharing data and allows fully comprehensive project reports to be generated.

Any document (even hand written notes) can be scanned, converted to .pdf and then stored in the project file within ElcoMaste ®.

For those users wanting to transfer data into other software applications ElcoMaster® can be configured to export data directly, there is no need to use the data management aspect of the software.

As with our gauges this software is dynamic in that Elcometer are always adding new features as our customers require them.

Updates to the software are freely available over the internet and it is also possible to upgrade our inspection gauges when they are connected to ElcoMaster®.

ElcoMaster® is the complete solution.

Data Management Software

ElcoMaster® data management software — Data Management Software

ElcoMaster® is a fast, easy to use software and mobile app for all your data management, reporting and quality assurance needs.

It's not just taking measurements but what you do with the collected data that matters.

Easy to connect
Using ElcoMaster's® gauge wizard, connecting a gauge & downloading data (via Bluetooth® or USB) is fast and easy

Export, print or send
Export, print, .pdf or email directly from ElcoMaster® at the click of a button

USB

Bluetooth®

Import existing reports
Scan your existing report into ElcoMaster® and drag & drop all your data where you want it, then simply save and print

Cloud
Multi-site access through secure cloud computing
ElcoMaster® exports data direct to Microsoft Excel. csv, txt, cqatk formats etc. to save time and prevent keying in errors.

Data can be stored in a simple file tree, by project and by inspection type.

Add photographs and notes to your reports.

Data Management Software

ElcoMaster®
data management software

As inspectors can spend up to 30% of their working week producing reports, ElcoMaster® saves time and money by producing professional bespoke reports in seconds - even when out on site.

What ElcoMaster® can do:

- Import and combine measurements via Bluetooth® or USB from a full range of Elcometer gauges, including;
    - Surface Profil
    - Salt Contamination
    - Climatic Conditions
    - Oven Data Logging
    - Coating Thickness
    - Corrosion Thickness
    - Adhesion Testing
    - Gloss Measurement
- No need to learn different software for different gauges, all Elcometer products use the same expert platform.
- Store data in a simple file tree, by project and by inspection type.
- Easy on screen analysis with histograms, statistics, measurements, limits, notes, diagrams and photographs.
- Export data direct to Microsoft Excel. csv. txt. Cqatk formats etc to save time and prevent keying in errors.

- Generates reports instantly using standard or pre-designed templates in seconds. No need for data manipulation simply connect the gauge, download data and drag & drop.
- Combine multiple inspection parameters (such as DFT, profile, climate, adhesion and gloss) together with images, notes and other project specific information in bespoke quality reports to set you apart from the competition.
- In many industries multiple sites/locations/ production lines are used to fabricate the product components which are brought together at the final assembly line. Different inspection parameters all need to be combined to approve the final product. Using Cloud technology ElcoMaster® gives you real time quality control monitoring inspection projects in any location.

Cloud   Email
Using the Report Designer within ElcoMaster®, measurements can be quickly displayed on an image or drawing.
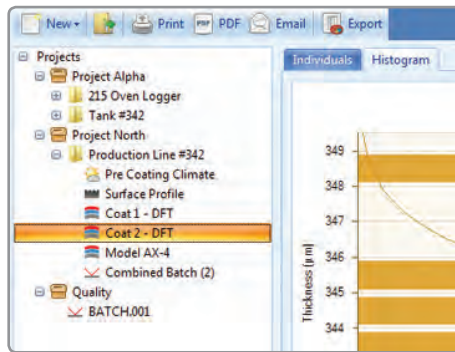

Combine multiple inspection parameters (DFT, climate, profile, adhesion, gloss & salt contamination) into bespoke reports.

Generate .pdf reports combining all your inspection data and share via email or the cloud at the click of a button.

Data Management Software

ElcoMaster®
data management software

Data Management Software

ElcoMaster® Mobile App brings the office to where you are.

You can connect Elcometer Bluetooth® enabled inspection gauges directly to iPhone, iPad and iPods or Android™ mobile phones and tablets via ElcoMaster® Mobile App.

When out in the field or on site, you can review data instantly using our free ElcoMaster® Mobile App. Press 'Generate PDF' and watch the ElcoMaster® App produce a professional report instantly. Email the report to your client seconds after you have finished inspecting or upload it via cloud technology so it can be accessed anywhere in the world.

With data transferred to mobile devices whilst out in the field, the Elcometer gauge does not have to be returned to the offic for data download. Inspection work can continue without interruption.

ElcoMaster® Mobile App shares many features of ElcoMaster® for PC:
- Download batches from Elcometer Bluetooth® enabled gauges
- Add notes, photographs and diagrams
- Pdf.[1] and email reports
- Using the phone's GPS feature, add this data to batch file
- Use collection batch measurement location points on photos or images to indicate to users where each measurement needs to be taken[2]

[1] Available on iOS devices only
[2] Availabe on Android™ only

- □ Surface Profile
- □ Salt Contamination
- □ Climatic Conditions

Data Management Software
ElcoMaster®
data management software

With data transferred to mobile communication devices, the Elcometer gauge does not have to be returned to the office for data download. Inspection work can continue without interruption.

Connect
Connect gauge via Bluetooth® to phone to see live readings directly on the phone and save them into batches.

Review
Review average, maximum and minimum readings instantly.

Analyse
Analyse data via sequential readings, statistics, charts & histograms or on images.

Manage & Print
Store all data; dry film thickness, surface profile, climate and manual reports in easy to manage folders.

Photos & Notes
Add photos, notes and comments.

Send
Email inspection data from a mobile device to a PC for further analysis and reporting or transfer data via the Cloud.

GPS
Store GPS locations in batches and view location on Google Maps.

Cloud   Email

Data Management Software - Oven Profiling

Elcometer 215
Oven Data Logger

High Temperature Barrier Kit
Themal barrier & heat sinks for longer time at temperature

Standard Thermal Barrier Kit
With thermal barrier - ideal for single runs

ElcoMaster® is the easy to use software solution designed specifically for the management and assessment of your temperature profile, allowing you to generate professional inspection reports in seconds. Features include:

Oven Logger Set Up - Create and store unique oven profile setups, name each of the 6 channels, set sampling rates, number of batch runs, start/stop triggers and transfer them to the gauge.

Coating Parameters - Set up a library of individual paint types incorporating min, mid & max cure temperatures as well as the maximum absolute and minimum cross link temperatures.

Coating Datasheets - Save a copy of the coating's data sheet as a permanent record.

Product Probe Maps - Simply drag and drop up to 6 probe ID markers on to your product photo or drawing to record exact probe placement for each production run.

Customisable Templates - Create your own comprehensive inspection profile - simply choose a relevant gauge setup, paint parameter and product probe map from your library and assign them to your logger data, providing instant, meaningful and professional reports.

Elcometer Cure Value - Using the industry accepted cure value calculation ElcoMaster® provides instant Pass/Fail information by comparing the production run temperature to the coating supplier's cure requirements.

Graphical Reporting - Standard temperature profile graph, cure process and individual profile/cure graphs combined with the product probe map are available as standard.

Combined Reports - Fully customisable reports can be quickly generated - allowing oven profile reports to be combined with data from coating thickness, gloss & adhesion gauges.

Data Management Software - Oven Profiling

Oven Data Logger

Elcometer 215

ElcoMaster® Software Oven Profiling Key Features	
Oven Logger set up & programming	∎
Paint/Powder parameter library	∎
Product probe maps	∎
Fully customisable inspection templates	∎
Selectable probe/channel traces	∎
Statistical analysis by probe/channel Max, Min, standard deviation, coefficient of variati	∎
Temperature profile, cure progress, histogram & individual cure value graphs against product	∎
Time at temperature, time of peak differenc	∎
Time above maximum absolute & minimum cross link temperatures	∎
Fully customisable inspection reports	∎
Combined reports - coating thickness, gloss, adhesion, profile, climate, surface cleanlines	∎
Report generator wizard & PDF generator	∎
Email or export data	∎
Import photos, data sheets, critical data, inspection notes, etc & include on inspection reports	∎
Cloud computing - allows for cross site collaboration, including internal text messaging tool	∎
Overlay temperature profiles, review and compare multiple oven profiles over tim	∎
Use additional data loggers for multiple channels or run overlays	∎

Create and store unique oven profile setups and transfer them to the gauge.
Set up a library of individual paint parameters.

Individual product probe maps record the exact probe placement for each component.
Standard temperature profile and cure process graphs can be viewed at any time.

Statistical analysis by probe/channel.

How ElcoMaster® Works

The different ways ElcoMaster® can help you do your job better

ElcoMaster® has been designed to be a very intuitive method of developing professional reports as it is extremely versatile. Here are just a few ways ElcoMaster® can be used in day-to-day activities of a coating professional.

1. Gauge to PC to Excel

Transferring inspection data straight into Microsoft Excel via Bluetooth® or USB is simple and easy.

2. Gauge to PC data transfer into ElcoMaster®

Using Bluetooth® or USB, ElcoMaster® transfers inspection data in seconds, archiving data and generating reports at the click of a button.

3. ElcoMaster® Mobile App for immediate data transfer from the site to the office
Email

Transfer inspection data straight to mobiles and tablets via Bluetooth® when on site for instant analysis, generate .pdf reports[1] and email them back to the office for storing, review and reporting.

4. Upload to a cloud for real time analysis anywhere
Using ElcoMaster® Mobile App you can upload inspection data, photos, notes and GPS coordinates direct to a Cloud account of your choice via 3G/4G or WiFi.

All data is instantly visible to other approved users of the account - through a secure log-in on any computer or mobile device anywhere in the world.

5. Seamlessly link multiple sites or production lines

ElcoMaster® gives you real time quality control monitoring from multiple inspection projects in any location.
You can compare and combine inspection data from different production lines or different locations, to produce specific Project Inspection Reports quickly and easily.

Real time collaboration for multi-site projects
When working with manufacturers of sub-assemblies across the globe ElcoMaster® can collate all inspection data from each site, assembly line and project into one shared location. Contractors can then:
- Accept or reject parts before shipment from sub-assembly plants.
- Combine all data from sub assembly and final assembly inspection to generate Project Inspection Reports for quality management, both during the project and after completion of the project.
- Have real time in progress visibility across the whole project, no matter where the sub-assembly manufacturing is in the world.
- Have multi-site collaboration, real time dialogue and decision making to improve efficienc and quality throughout the production process.

Real time communication
Featuring instant messaging the ElcoMaster® Mobile App lets you add messages to inspection data, projects and files, allowing you to immediately discuss key points with your colleagues, managers or clients, send work instructions and store messages within the project file

Your data - your choice - your control
ElcoMaster® allows you to decide which Cloud service provider to use. It is your data, it is secure as only approved users can have access, no third parties can see your data.
ElcoMaster® Mobile App is compatible with a range of cloud service providers and FTP servers including:

works with Google Drive

Data Management Software

ElcoCalc™ Mobile App

Viscosity Cup Converter & SCM 400 Adjusted Measurement Calculator App

Fast and easy to use, ElcoCalc™ instantly converts viscosity cup flow time in seconds into Centistokes (cSt). In addition this software calculates the adjusted measurement for the Elcometer SCM 400 Salt Contamination Meter when used with Elcometer 130 High Purity Filter Papers in µg/cm².

Viscosity Cup Converter

Select the Elcometer Cup Type and Number

Enter the flow time in seconds

Read the Viscosity in Centistokes (cSt.)

SCM 400 Adjusted Measurement Calculator

Enter the SCM 400 measurement.

Option to enter temperature on site either in °C or °F.

Read the adjusted measurement.

Elcometer 2350, 2351, 2352, 2353, 2354
Viscosity Flow Cups

Elcometer 2210
Zahn Viscosity Dip Cups

Elcometer 2434, 2435, 2436, 2437
Frikmar Viscosity Dip Cups

Elcometer 2310
Shell Viscosity Dip Cups

Elcometer SCM 400
Salt Contamination Meter

Elcometer 130
Salt Contamination Meter with
High Purity Filter Papers

Adjusted measurements explained:

If the Elcometer 130 High Purity Filter Papers are used with the Elcometer SCM 400 the reading should be corrected using the formula: $y = 0.95x - 0.4$ where y is the cleanliness value in µg/cm² and x is the Elcometer SCM 400 meter reading in µg/cm². Option to apply the temperature compensation of 1.7% per °C.

By using ElcoCalc™ it automatically calculates the correct reading.

ElcoCalc™ is free software that is available on Android™ and the App Store. Compatible with Android™ mobile devices running Android™ 2.1 or later and also iPod, iPhone and iPad running iOS 4.0 or later.

Android™ is a trademark of Google Inc.
iOS is a trademark or registered trademark of Cisco in the U.S. and other countries and is used under licence.

Surface Preparation

Surface Profile & Surface Cleanliness

Surface preparation is one of the most important factors in the successful application of a coating or surface treatment and is critical to the effective lifetime of the coating. For any coating to perform successfully it is essential that the substrate is prepared properly.

Ensuring the correct surface preparation optimises the performance of the coating and material usage. Elcometer supply a range of products to meet each of the key industry standard surface preparation inspection methods, including;

Surface condition: Degree or percentage of rust, level of mill scale, etc can be visibly assessed using Pictorial Surface Standards. Weld beads can be assessed utilising a weld comparator and weld gauges measure a range of quality parameters.

Blasting parameters: A number of important parameters need to be monitored during the blasting or water jetting process, these include: air pressure (at the nozzle), nozzle diameter, blast media contamination & pH values in order to avoid recontamination of the substrate during blasting.

Surface profil : The degree of profile on the surface affects a coating s overall performance and determines aspects such as adhesion, coverage and overall volume of coatings used. If the profile is too large the amount of coating required increases, otherwise there is a danger that the peaks remain uncoated - allowing rust spots to occur. If the profile is too small there may be an insufficient key for adequate adhesio

Surface roughness: These consist of a stylus attached to an arm which moves over the surface to record and measure the roughness over a specified distance, recording peak-to-valley average.

Surface cleanliness: Soluble salts & ion specific contamination (sulphates, chlorides, nitrates etc.) which are often invisible to the eye, together with amine blush (for amine cured epoxy coatings) can result in premature coating failure, resulting in high re-coating and maintenance costs. Elcometer has a range of test equipment for assessing surface cleanliness prior to applying a coating.

Surface Preparation - Condition

Elcometer 128

Pictorial Surface Standards

Pictorial Surface Standards are high quality photographs which are used for comparison purposes to assess the visual appearance of a steel surface. Elcometer's range of Surface Standards cover most of those required for surface cleanliness. These include:

Technical Specification

	Part Number	Description
	E128----1	BS EN ISO 8501-1:2007/SIS 055900 - the original visual standard. It shows the degree of cleanliness of different levels of rusted steel cleaned by blasting, hand and power tools and flame, specified by ASTM D2200 Method A
	E128----3	SSPC (Steel Structures Painting Council) VIS 1 - similar to the Swedish and British standards, but the pictures of the required final appearances match the written descriptions in the USA standards. VIS 1-89 includes photographs of surfaces cleaned using metallic and non-metallic abrasives. Specified by ASTM D2200 Method B
	E128----5	SSPC - VIS 3 - contains 44 photographs to supplement the written SSPC specifications for hand and power tool cleaning
	E128----6	SSPC - VIS 2 Standard method of evaluating the degree of rusting on painted steel surfaces
	E128----7	SSPC - VIS 4 Guide and reference photographs for steel surfaces prepared by waterjetting
	E128----8	SSPC - VIS 5 Guide and reference photographs for steel surfaces prepared by wet abrasive
	E128----9	BS EN ISO 8501-4:2006 - preparation of steel substrates before application of paints and related products. Visual assessment of surface cleanliness. Initial surface conditions, preparation grades and flash rust grades in connection with high-pressure water jetting

STANDARDS:

ASTM D 2200, IMO MSC.215(82), IMO MSC.244(83), ISO 8501-1, SS 55900, SSPC VIS 1, SSPC VIS 2, SSPC VIS 3, SSPC VIS 4, SSPC VIS 5, US Navy NSI 009-32, US Navy PPI 63101-000.

Pit Gauge

Elcometer 119

The Elcometer 119 Pipe Pit Gauge is a pocket size gauge designed to identify the condition of a pipe.

The gauge is placed horizontally on the surface of the pipe and the stylus is positioned into the base of the corrosion pit.

The gauge shows the pit depth compared to the nominal pipe wall thickness. Imperial units only.
Technical Specification

Part Number	Description
E119-----	Elcometer 119 Pipe Pit Gauge
Range	0 - 500mils (0 - 0.5")
Graduation	10mils and 1/16"
Dimensions	68 x 133 x 4mm (21 x 5.25 x 0.18")
Weight	227g (8oz)

Weld Gauge

Elcometer 147

The Elcometer 147 Weld Gauge measures many aspects of welds in both Metric and Imperial units and includes:

- angle of preparation 0 to 60°
- misalignment (high - low)
- fillet weld throat siz
- fillet weld lengt
- 2mm (0.79") edge roundness test

- excess weld metal (capping size)
- depth of undercut
- depth of pitting
- general linear measurements up to 60mm (2")

Technical Specification

Part Number	Description
H147----1	Elcometer 147 Weld Gauge
Angle of Preparation Scale	0 - 60° in 5° divisions
Misalignment Scale	0 - 25mm in 1mm divisions and 0 - 1" in $\frac{1}{16}$ " divisions
Fillet Leg & Excess Weld Scale	0 - 25mm in 1mm divisions and 0 - 1" in $\frac{1}{16}$" divisions
Fillet Throat Scale	0 - 20mm in 1mm divisions and 0 - ¾" in $\frac{1}{16}$" divisions
Undercut Scale	0 - 4mm in 1mm divisions and 0 - ¼" in $\frac{1}{16}$" divisions
Dimensions	100 x 68mm (3.9 x 2.7")
Weight	154g (5.4oz)
Packing List	Elcometer 147 Weld Gauge and instruction card

Surface Preparation - Condition

Elcometer 999

Weld Comparator

The Elcometer Surface Weld Comparator provides for the first time, a means of comparing the quality of welds.

Made from durable T Grade ABS plastic, the comparator comprises 14 different examples of actual welds, allowing a thorough evaluation to be completed.

Each Weld Gauge is supplied complete with a copy of the NACE SP0178-2007 Standard, providing detailed recommendations on design, fabrication and surface finish requirements. It includes generic and graphic descriptions of various degrees of surface finishing of welds that may be specified in preparation for the lining of tanks and vessels.

STANDARDS:
SP0178-2007, RP0178

Technical Specification

Part Number	Description
H99921527	Elcometer Surface Weld Comparator

Elcometer 138/2

pH Test Strips

The Elcometer 138/2 pH Test Strips provide the user with a means for testing acidic or alkaline contaminants.

Day to day air particulate contaminants generated by modern industry generate particulates of hydrocarbons such as sulphur. Agricultural fertilizers generate nitrates. When they combine with moisture in the atmosphere they create sulphuric and nitrate acids, which if present on the substrate, breaks down the surface of any coating. Furthermore, any water used to clean the surface containing levels of pH will have a similar effect.

Technical Specification

Part Number	Description
T13820562	100 x pH Test Strips

For Chloride Ion Test Kits for surfaces MORE INFO ▶

pH Tester

Elcometer 148

In many industries, pH measurement is critical to the correct performance of processes. pH is the measure of acidity of a liquid.

The pH scale ranges from 0 to 14pH - where 0pH is acidic and 14pH is alkaline. pH is temperature dependent thus the temperature of the sample under test will affect the pH value recorded.

This simple, easy to use instrument measures both pH and temperature using a single sensor.

The Elcometer 148 sensor has automatic temperature compensation, ensuring like-for-like measurements can be taken for meaningful comparison of the results.

- Simultaneously displays pH and temperature
- Measurement hold / freeze function
- Record maximum and minimum readings over a series of tests
- ºC / ºF user switchable
- Waterproof to IP57 and floats on wate
- Auto power off

The condition of the sensor is automatically monitored after each successive calibration and sensors can be easily replaced by the user as and when required.

STANDARDS:
ASTM E 70

Technical Specification

Part Number	Description	
H148----1	Elcometer 148 pH Tester	
	pH	Temperature
Range	0 to 14pH	0 to 89ºC (32 to 192ºF)
Resolution	0.01pH	0.1ºC (0.1ºF)
Accuracy	±0.03pH	±0.5ºC (±1ºF)
Battery	4 x AAA batteries	
Calibration	3 point at 7pH, 4pH and 10.01pH	
Dimensions	195 x 40 x 36mm (7.7 x 1.6 x 1.42")	
Weight	150g (5.3oz)	
Packing List	Elcometer 148 pH Tester, pH/Temperature sensor, 4 x AAA batteries, wrist strap, 4pH calibration sachet, 7pH calibration sachet and operating instructions.	

Accessories

T14821766	pH/Temperature Sensor
T14821768-1	4pH Buffer Solution for Calibration: Capsules, Pack of 1
T14821768-2	7pH Buffer Solution for Calibration: Capsules, Pack of 1
T14821768-3	9pH Buffer Solution for Calibration: Capsules, Pack of 1
T14821767-1	4.01pH Buffer Solution for Calibration: 100ml (3.38 fl oz) Bott
T14821767-2	7pH Buffer Solution for Calibration: 100ml (3.38 fl oz) Bott
T14821767-3	10.01pH Buffer Solution for Calibration: 100ml (3.38 fl oz) Bott

Surface Preparation - Blasting

Elcometer 134A

Chloride Ion Test Kit for Abrasives

Chlorides deposited on a surface by contaminated abrasives during blasting can cause a coating to fail prematurely.

Contamination can build up, particularly if the blast media is recycled several times. Using the Elcometer 134A Chloride Ion Test in the field will accurately identify contamination and prevent costly surface-related failures.

Technical Specification

Part Number	Description		
E134----2	Elcometer 134A Chloride Ion Test Kit for Abrasives (4 Tests per Kit)		
Measuring Range	1 - 60µg/cm² (1 - 60ppm)	Resolution	1µg/cm² (1ppm)
Sample Time	1.5 minutes (approx)		
Storage Conditions	Not exceeding 25°C (77°F)		
Dimensions	185 x 125 x 110mm (7 x 5 x 4.5")	Weight	367g (13oz)
Packing List	4 x test kits, containing: abrasive sample container, mixing container with a pre-measured quantity of solution, titration tube, titration tube snapper, strap and operating instructions		

Elcometer 134W

Chloride Ion Test Kit for Water

The Elcometer 134W is used to monitor recycled water (after it has been applied) to establish effectiveness of salt removal, this test is ideal for testing the salt contamination in wash water and blast water.

If the chloride levels in the wash water are too high, this will promote premature corrosion, shortening the life of both steel and concrete structures.

This test can also be used when mixing concrete.

Technical Specification

Part Number	Description		
E134----3	Elcometer 134W Chloride Ion Test Kit for Liquids (5 Tests per Kit)		
Measuring Range	10 - 2000µg/cm² (10 - 2000ppm)	Resolution	10µg/cm² (10ppm)
Sample Time	1.5 - 4 minutes (approx)		
Storage Conditions	Not exceeding 25°C (77°F)		
Dimensions	185 x 125 x 110mm (7 x 5 x 4.5")	Weight	208g (7oz)
Packing List	5 x test kits each containing: sample container bottle with dropper in lid, titration tube, titration tube snapper and operating instructions		

For Chloride Ion Test Kits for surfaces   MORE INFO ►

Needle Pressure Gauge

Elcometer 102

The Elcometer 102 Needle Pressure Gauge is designed to measure air pressure in blast and air hoses. Pressure drop is responsible for decreased production rates, increased abrasive consumption and reduced anchor profile in abrasive blasting systems.

Technical Specification

Part Number	Description		
E102----A	Elcometer 102 Needle Pressure Gauge		
Measuring Range	0-160 psi		
Dimensions	130 x 55 x 26mm (5.12 x 2.16 x 1.02")	Weight	184g (6.49oz)
Packing List	Elcometer 102 Needle Pressure Gauge, pressure gauge guard, spare hypodermic needle, protective pouch and operating instructions		

Blast Nozzle Gauge

Elcometer 103

The Elcometer 103 Blast Nozzle Gauge measures the orifice size of an abrasive blasting nozzle. This gauge is used to determine the nozzle orifice wear which leads to low nozzle pressure and decreased efficienc in the performance of the nozzle's venturi. Nozzle orifice wear results in decreased productivity and increased abrasive media consumption.

Technical Specification

Part Number	Description

Elcometer 224

Digital Surface Profile Gaug

The Elcometer 224 provides the very latest in surface profile measuring technology for measuring profile on either flat or curved surfaces.

Fast reading rate of 50+ readings per minute^

Stores up to 150,000 readings in up to 2,500 alpha numeric batches

Integral & separate probe options for flat and convex** surfaces

Dust and water resistant rugged design equivalent to IP64

USB and Bluetooth® data output to ElcoMaster® software

^ Convex probe up to 25 readings per minute

Digital Surface Profile Gaug

Elcometer 224

Fast, accurate and very user friendly, the Elcometer 224 is available with or without memory and Bluetooth®.

Measures on flat and convex surfaces

Accurate, immediate and repeatable results

Review batch data or last 20 readings in a graph format

Time and date stamped measurements

Auto rotating display with tap awake feature

User replaceable tough tungsten carbide tips
2.4" colour screen provides enhanced reading visibility at all angles

Ergonomic design for comfort during continuous use

Integral or separate probes measure profiles up to 500µm (20mils) on flat or curved surfaces**

Made for
iPod iPhone iPad

Android™

available with
Bluetooth®
wireless technology

compatible with
ElcoMaster®

Elcometer 224   **Digital Surface Profile Gaug**

Designed with you in mind

User Friendly

- Large buttons ideal for gloved hands
- Easy to use menus in multiple languages
- High contrast colour LCD with auto rotate
- High and low reading limit indicators
- Factory calibrated for immediate use

Accurate

- Measurement capability to ±5%
- Can be used in accordance with National and International Standards
- Temperature stable measurements
- Statistics are calculated and displayed in real time
- Live and batch readings graph format for instant analysis

Reliability

- Repeatable and reproducible measurements
- 2 year gauge warranty†
- Supplied with fully traceable Test Certificate
- Batch & individual readings are date and time stamped

Tough

- Sealed, heavy duty and impact resistant
- Dust and waterproof equivalent to IP64
- Suitable for use in harsh environments
- Scratch and solvent resistant display
- Durable gauge and probe construction

Efficient

- Fast reading rate of 50+ per minute
- Integral and separate probe versions to suit your application
- Alpha numeric batch identificatio
- Compatible with ElcoMaster® and ElcoMaster® Mobile App
- Powersave mode with tap awake

Powerful

- User replaceable tough tungsten carbide tip - can be used for up to 20,000 readings
- USB and Bluetooth® data output to iPhone* or Android™ devices
- Stores up to 150,000 readings in 2,500 batches
- Measures profiles up to 500µm (20mils

*Compatible with iPod, iPhone and iPad.

Elcometer

Digital Inspection Kits

These digital inspection kits have been specifically designed to undertake the three principal inspection requirements in the Protective and Industrial Coatings Industry – climate, surface profile and dry film thickness. Ideal for 'paperless' quality assurance systems the kits come complete with ElcoMaster® Data Management Software for professional reporting and analysis.

Surface Preparation - Profile

Elcometer 123

Surface Profile Gaug

The Elcometer 123 Surface Profile Gauge is an easy to use analogue gauge which measures the peak-to-valley height of a blast cleaned surface in a similar way to the Elcometer 224.

• Metric and Imperial versions available

Technical Specification   C

Part Number	Description			Certificat
E123A--M-	Elcometer 123 Surface Profile Gauge, Metri			○
E123A--E-	Elcometer 123 Surface Profile Gauge, Imperia			○
Range	0 - 1000μm (0 - 40mils)	Scale	2μm (0.1mil)	
Dimensions	105 x 55 x 25mm (4.1 x 2.2 x 1")	Weight	335g (8oz)	
Packing List	Elcometer 123 Surface Profile Gauge, glass slide, 2mm allen ke , carry case and operating instructions			

How to measure surface profile
1. Calibrate on a glass zero tile.

2. Ensure probe is 90° to substrate to ensure accurate readings.

3. Take a minimum of 10 readings over an area to establish the average surface profile

4. Record the average or maximum readings depending on the standards.

○ Optional Calibration Certificate available

elcometer

Testex® Replica Tape

Elcometer 122

Elcometer 122 Testex® Tape consists of foam with a non-compressible backing. The foam side is rubbed into the surface providing a permanent mould of the peak-to-valley profile, which can then be measured using the Elcometer 124 Thickness Gauge.

Elcometer 122 Testex® Tape is available in four profile ranges. It is important that the tape grade chosen is reflective of the profile being measure

- For profiles between 12 & 25µm (0.5 & 1.0mils): Coarse Minus Tape
- For profiles between 20 & 38µm (0.8 & 1.5mils): Coarse Tape
- For profiles between 38 & 64µm (1.5 & 2.5mils): Average of Coarse and X-Coarse Tape
- For profiles between 64 &   15µm (2.5 & 4.5mils): X-Coarse Tape
- For profiles greater than   15µm (4.5mils): X-Coarse Plus Tape

There are 50 tests in each roll.

STANDARDS:
ASTM D 4417-C, BS 7079-C5, ISO 8503-5, NACE RP0287, SSPC PA 17, US Navy NSI 009-32, US Navy PPI 63101-000

Technical Specification

Description	Profile Rang		Part Number			
	Metric	Imperial	1 Roll	Pack of 10	Pack of 50	Pack of 100
Elcometer 122 Coarse Minus	12 - 25µm	0.5 - 1.0mils	E122----A1	E122----A10	E122----A50	E122----A100
Elcometer 122 Coarse	20 - 64µm	0.8 - 2.5mils	E122----B1	E122----B10	E122----B50	E122----B100

Elcometer 122 X-Coarse Plus	116 - 127µm	4.6 - 5.0mils	E122----F1	E122----F10	E122----F50	E122----F100

Accessories

T12222498	Swizzle Sticks (Pack of 5)

How to take a reading using the Testex® Replica Tape
1.Tear off one section of the tape from the roll, peel off the backing tape and retain the back if required for future use.

2. Stick the tape on to the test surface, and rub the central portion using the swizzle stick provided, or the end of a pen, pencil or similar rounded object until dark spots appear. This gives a surface replica.

3. Using a micrometer such as the Elcometer 124 Foil Thickness Gauge, measure the thickness of the central portion of the tape replica and substract 50µm (2mils) from the reading. This result is the peak-to-valley profile height. Write the value on the tape.

4. If the value falls within the purple band on the coarse tape (38-64µm) then repeat the test as shown in step 2 using the extra coarse tape and then average the two values.

5. If the tape is required for future reference, replace the backing tape to preserve the imprinted profile

Surface Comparators

These extremely durable comparators allow the estimation of surface profile of either grit or shot blasted surfaces. Using the Elcometer 125 surface comparators as a reference the blasted profile can be compared to the four reference profile grades in each comparator. Profiles are recorded in microns.

- 4 Profile alues per Comparator

Technical Specification

Part Number	Description	Section Profile
E125----1	Elcometer Grit Surface Comparator	25, 60, 100, 150µm
E125----2	Elcometer Shot Surface Comparator	25, 40, 70, 100µm

○ Optional Calibration Certificate available

elcometer

Keane-Tator Surface Comparators & Magnifie

Elcometer 127

The Elcometer 127 range of Surface Comparators are available in sand, shot or grit surface profiles. Each comparator is supplied with 5 profile grades ranging from 0.5 - 5.5mils. Designed for use with the Elcometer 127 illuminated magnifie , each comparator has a hole in the centre allowing for clear visual comparisons to be made.

• 5 Profile alues per Comparator

STANDARDS:
AS 3894.5, ASTM D 4417-A, SSPC PA 17

Technical Specification

Part Number	Description	Section Profile
E127----2	Elcometer 127 Sand Surface Comparator	0.5, 1, 2, 3, 4 mils
E127----3	Elcometer 127 Grit Surface Comparator	1.5, 2, 3, 4, 5 mils
E127----4	Elcometer 127 Shot Surface Comparator	2, 2.5, 3, 4, 5.5 mils
E127----1	Illuminated magnifier (x 5) with integrated surface comparator holde	

Rubert & Rugotest Surface Comparators

Elcometer 129

The Elcometer 129 Surface Comparators are available in two models:

• Elcometer 129 Rubert - available in grit and shot versions
• Elcometer 129 Rugotest - shot and grit profiles on the same bloc

Roughness is displayed in both "classes" and "roughness averages" for easier identification. Available in Metric only.

• 6 Roughness Values per Comparator

STANDARDS:
AS 3894.5

Technical Specification

Part Number	Description	Section Profile
E129----1	Elcometer 129/1 Rubert Grit Surface Comparator	0.4, 0.8, 1.6, 3.2, 6.3, and 12.5µm
E129----2	Elcometer 129/2 Rubert Shot Surface Comparator	0.4, 0.8, 1.6, 3.2, 6.3, and 12.5µm
E129----3	Elcometer 129/3 Rugotest Shot & Grit Surface Comparator	N6, N7, N8, N9, N10 and N11 equivalent to 0.8, 1.6, 3.2, 6.3, 12.5, and 25µm roughness averages respectively

Surface Preparation - Roughness

Elcometer 7061

MarSurf PS1 Surface Roughness Tester

The Elcometer 7061 is a light weight and portable measuring solution for the range of surface roughness measurements required for compliance to International Standards.

The unit is also suitable for assessing surface roughness conditions in a wide range of general industrial applications; particularly where the sample is too large to bring to the laboratory.

Measurements of Surface Roughness are expressed in terms of Ra, Rz or Rt. These values include peak-to-valley profile measurement in combination with an assessment of the frequency of peaks within the sample area.

- Multilingual Display
- Integrated Calibration Standard

STANDARDS:
ASTM D7127, ASME B46, DIN 4768, EN 10049, ISO 4287, ISO 4287/1, JIS B 0601, SSPC PA 17

KT007061P012	Measuring Stand Mount - Required to fix the Elcometer 7061 to the measuring stan
KT007061P011	End Face Vee-Block - For measuring on flat faces of cylindrical and planar component
KT007061P013	Adaptor Set for Transverse Tracing; Comprising of Adaptor for Transverse Tracing and Vee-Block Holder with Vee-Block - For hand-held transverse tracing of cylindrical measuring objects
KT007061P016	**MarSurf PS1 Explorer Evaluation Software** Available as an optional accessory PS1 Explorer Evaluation Software allows the Elcometer 7061 to be connected to a PC or laptop; using the USB cable supplied to document protocol profiles, results, statistics and to print out all your measurement results.

How to use a Surface Roughness Tester

Surface Roughness Testers consist of a stylus which is mechanically drawn across the surface recording an "image" of the surface roughness across a pre-defined sample length.

The measurement technique provides a number of measurement parameters including:
- **Rmax:** The greatest distance between the highest peak and lowest valley over the sampling length

- **Ra:** The average roughness over the sampling length

- **Rt:** The distance between the highest peak and the lowest valley within any given sampling length.

- **Rz:** The average distance between the highest peak and lowest valley over a number of sampling lengths

Surface Preparation - Cleanliness

Elcometer 130 SSP   **Soluble Salt Profile**

The Elcometer 130 soluble salt profiler provides fast and accurate measurement of the level and density of soluble salts - over 4 times faster than other Bresle equivalent methods.

elcometer

Soluble Salt Profile

Four Bresle equivalent readings in 2½ minutes

Each filter paper is the size of four Bresle patches - the Elcometer 130 Soluble Salt Profiler not only displays the individual reading, but also provides four Bresle equivalent readings in just over two minutes.

The new Elcometer 130 SSP doesn't just measure the level of soluble salts

In addition to soluble salt levels (cleanliness) or conductivity, the Elcometer 130 SSP carries out a detailed analysis of the test area - providing an accurate salt density profile map, pinpointing areas of high contamination outside user defined limit

Accurate in all environments

The Elcometer 130 SSP has automatic temperature compensation ensuring accuracy in all climatic conditions. Impure water can be offset for accurate and repeatable readings.

Each gauge is designed to last

Robust, durable & water resistant, the Elcometer 130 SSP is available with a 2 year manufacturer's warranty; giving you peace of mind.

Generate instant reports on your PC, Android™ or iOS mobile device

The Elcometer 130 SSP wirelessly transmits readings, statistics and batches via Bluetooth® or via USB straight into an inspection application or into ElcoMaster®, Elcometer's Mobile App, for instant report generation at your desk or, using your mobile, in the field.

Calibration verification - peace of min

A Calibration Verification Tile is available for verifying the accuracy of the gauge whilst out in the field and the verification date is recorded for use in report

Calibration Verification Tile available for verifying the accuracy of the gauge

Surface Preparation - Cleanliness

Elcometer 130 SSP   Soluble Salt Profile

How to use the Elcometer 130 Soluble Salt Profiler

1. Wearing clean disposable gloves (supplied), fill a syringe with precisely 1.6ml of deionised water.

2. Using tweezers, remove a filter paper from the pack and place it on the cleaned, non-labelled side of the magnetic disc supplied.

3. Disperse the water from the syringe, evenly across the whole of the filter paper and remove any bubbles from under the paper.

4. Place the magnetic disc, with wetted paper face down on to the area under test, pressing firmly into any contours or irregularities and start the 2 minute timer on the gauge.

5. After two minutes, carefully remove the filter paper and magnetic disc from the test surface and place on to the measurement electrodes.
6. As each filter paper remains on the surface for two minutes, multiple tests can be undertaken at the same time, reducing inspection times further.

7. Close the lid, ensuring that the magnetic catch is fully engaged, the gauge will begin measuring.

8. The reading will be displayed on screen in the chosen display mode.

9. If required for further analysis, place the filter paper in a resealable bag (supplied).

Soluble Salt Profile

Elcometer 130 SSP

Bresle Patch Equivalence

Tested under laboratory conditions in accordance with ISO 8502-9, the Elcometer 130 SSP provides equivalent measurements to the Bresle Patch Method.

To show equivalency of measurement between the Bresle Method and the Elcometer 130 SSP it is essential that all parameters are identical except the gauges under test.

For equivalency to be established, both gauges should read a similar value, taking into account the accuracy and resolution of each test.

TEST METHOD

Working with the School of Materials at the University of Manchester (UK) an automated, repeatable and reproducible doping method was developed to apply a known salt concentration uniformly over a large panel.

Over 200 individual tests were undertaken across a range of concentrations and blast profiles

Nominal steel grit blast profile
- Smooth <25µm (1.0mils)
- 25 to 50µm (1.0 to 2.0mils)
- 50 to 75µm (2.0 to 3.0mils)
- 75 to 150µm (3.0 to 6.0mils)

Surface salt concentration levels
- $15mg/m^2$ to $25mg/m^2$
- $25mg/m^2$ to $35mg/m^2$
- $35mg/m^2$ to $45mg/m^2$
- $45mg/m^2$ to $55mg/m^2$
- >55 mg/m^2

Testing was undertaken under strict laboratory conditions, with each method tested in accordance with the manufacturer's instructions.

Comparison between Elcometer 130 SSP & Bresle Patch
RESULTS

"The Elcometer 130 SSP measurement equivalency is less than 0.46µg/cm² across all concentrations on smooth and blasted substrates, almost half the background contamination of a Bresle Patch."

The Elcometer 130 SSP has undergone extensive side by side comparison testing against the Bresle Test Patch Method.

Background (inherent) contamination within the Bresle Test Patch has shown that the Bresle Test Patch has a background contamination range of 0.88µg/cm² ($8.8mg/m^2$).

The variation in readings between the Elcometer 130 SSP and the Bresle Test method are significantly within the background contamination range of the Bresle Patches (0.88µg/cm²); being less than 0.41µg/cm² for concentrations below 8.0µg/cm², and less than 0.46µg/cm² across concentrations below 16.5µg/cm².

Surface Preparation - Cleanliness

Elcometer 130

Salt Contamination Meter

The Elcometer 130 quickly and accurately measures the level of soluble salts on surfaces over 4 times faster than Bresle equivalent test methods.

Automatic temperature compensation ensures accurate results

Fast reading rate allows multiple tests to be completed efficient

Pressure plate ensures a constant and uniform pressure to paper

Non-oxidising gold plated contacts ensures lifetime accuracy

Stores up to 100,000 readings in 1,000 alpha numeric batches

Dust and water resistant rugged design equivalent to IP64
Suitable for use in Cloud Computing

Measures on flat and convex surfaces

2 YEAR* WARRANTY

Made for iPod iPhone iPad

Android™

available with Bluetooth® wireless technology

compatible with ElcoMaster®

Elcometer 130 Model T: Made for iPhone 6 Plus, iPhone 6, iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPad Air 2, iPad mini 3, iPad Air, iPad mini 2, iPad (3rd and 4th generation), iPad mini, iPad 2, and iPod touch (5th generation). "Made for iPod," "Made for iPhone," and "Made for iPad" mean that an electronic accessory has been designed to connect specifically to iPod, iPhone, or iPad, respectively, and has been certified by the developer to meet Apple performance standards. Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards. Please note that the use of this accessory with iPod, iPhone, or iPad may affect wireless performance.

Salt Contamination Meter

Designed with you in mind

User Friendly

- Large buttons ideal for gloved hands
- Easy to use menus in multiple languages
- High reading limit indicator
- Factory calibrated for immediate use

Accurate

- Conductivity measurement to ±1%
- Can be used in accordance with National and International Standards
- Automatic temperature compensation ensures repeatable, accurate results
- Calibration verification tile
- Trend and batch readings graph formats for instant on-screen analysis

Reliable

- Repeatable and reproducible measurements
- 2 year gauge warranty*
- Supplied with fully traceable Test Certificate
- Batch & individual readings are stored with date and time stamp

Tough

- Heavy duty, impact resistant, dust and waterproof design equivalent to IP64
- Wipe clean sealed unit ideal for harsh environments
- Scratch and solvent resistant display

Efficient

- Instant readings allows multiple tests to be completed efficient
- Alpha numeric batch identificatio
- Compatible with ElcoMaster® and ElcoMaster® Mobile App
- Calibration offset allows the use of non-pure distilled water up to 2µg/cm²

Powerful

- Measuring range up to 50µg/cm² (3000ppm)
- USB and Bluetooth® data output to iPhone† or Android™ devices
- Stores up to 100,000 readings in 1,000 batches
- Soluble salt and conductivity meter in one gauge

Calibration Verification Tiles available for verifying the accuracy of the gauge

Supplied in a robust carry case

*

†Compatible with iPod, iPhone and iPad.

Bresle Salt Kit

Elcometer 138

It is essential that the level of contaminants on a surface is measured prior to application of the coating to ensure the quality of the coating and that its optimum lifetime is achieved.

If the coating is applied to a contaminated surface, which is not properly prepared, it could fail prematurely resulting in costly re-coating and high maintenance costs.

The Elcometer 138 Bresle Kit includes the Elcometer 138 Conductivity Meter. This lightweight, portable conductivity meter accurately measures the salinity of the test samples.

The sensor cartridge can be easily replaced when necessary and displays conductivity in a range of units including: S/cm, S/m, ppm and % salinity.

STANDARDS:

Measuring salt contamination using the Bresle method in accordance with ISO 8502-6/ISO 8502-9

Remove protective backing and foam centre from the patch.

Apply the patch to surface and press firmly around perimeter to achieve a complete seal - ensuring that a minimum amount of air is trapped within the test compartment.

Fill the syringe with 3.0ml of pure distilled water.Insert the syringe into the patch through its foam perimeter, at a 30° angle, so that it passes through the foam into the test compartment.

Inject the water into the test compartment. If necessary remove the remaining air within the compartment.

During an agreed period of time, without removing the needle - withdraw and re-inject the solution back into the patch, at least four times.

At the end of the period extract as much solution as possible.

Remove the syringe from the patch and measure the conductivity of the solution using a suitable Conductivity Meter such as the Elcometer 138.

Surface Preparation - Cleanliness

Elcometer 138B

new

Basic Bresle Salt Kit

If a coating is applied to a contaminated surface, which is not properly prepared, it could fail prematurely resulting in costly re-coating and high maintenance costs.

Therefore it is essential to measure the level of contaminants on a surface prior to coating application to ensure the quality of the coating and that its optimum lifetime is achieved.

The Elcometer 138 Basic Bresle Kit includes the Elcometer 138E Conductivity Meter and Elcometer 135C Bresle Test Patches. This lightweight, portable conductivity meter accurately measures the salinity of the test samples.

The sensor cartridge can be easily replaced when necessary and displays conductivity in a range of units including: S/cm & S/m.

Conductivity Meter

<div align="right">

Elcometer 138

</div>

Incorporating a flat sensor, the Elcometer 138 Conductivity Meter can measure the conductivity of a solution from a single drop of a sample.

Users can either place a sample on the meter's flat sensor or immerse the meter's sensor directly into the solution under test. The Elcometer 138 can be used for a broad range of applications, including: soluble salt concentrations, the electric conductivity (EC) of solutions used in agricultural operations and measuring rainwater pollution levels.

The Elcometer 138 Conductivity Meter includes a convenient salinity conversion indicator.

Features:
•   Highly precise measurements can be obtained from a single drop
•   Automatic range switching gives a wide measurement range of 1μs/cm to 19.9 mS/cm
•   Out of range and low battery alarms
•   Visual indication when ambient temperature is outside the operating range

Elcometer 138E

new

Conductivity Meter

Incorporating a cup-style sensor, the Elcometer 138E Conductivity Meter can measure the conductivity of a solution from a few drops of a sample.

Users can either place a sample on the meter's sensor or immerse the meter's sensor directly into the solution under test. The Elcometer 138E is suitable for a broad range of applications, including: soluble salt concentrations, the electric conductivity (EC) of solutions.

Features:
- Automatic range switching gives a wide measurement range of 0μs/cm to 20mS/cm
- Out of range and low battery indicators
- Automatic temperature compensation (ATC) and manual or automatic one or two-point calibration
- LCD screen with indicators and error messages, dual-line display
- User-replaceable integrated 2-pin, stainless steel electrode provides chemical resistance

Surface Contamination Kit

<div align="right">

Elcometer 138/2

</div>

Measuring the level of contaminants on a surface prior to application of the coating is essential to ensure the quality of the coating and that its optimum lifetime is achieved.

If the coating is applied to a contaminated surface, which is not properly prepared, it could fail prematurely resulting in costly recoating and high maintenance costs.

The Elcometer 138/2 Surface Contamination Kit provides the user with a means for testing invisible surface contaminants including:

- pH
- chloride ions
- iron
- salts

STANDARDS:

Surface Preparation - Cleanliness

Elcometer 138/2

Chloride Test Strips

Chloride ions on a steel surface increase the probability that corrosion of the steel will take place even if a protective coating is applied. Chloride ions trapped under a coating in the presence of steel and moisture will form a corrosion cell. This corrosion process will result in premature failure of the protective coating and may cause blistering of coatings in immersion service.

The chloride test strips will indicate the concentration of chloride ions in the sample solution and if the area of sample collection and the volume of water is known the concentration can be measured in parts per million or micrograms per millilitre.

Technical Specification

Part Number	Description
T13820564	40 x Chloride Test Strips

Elcometer 138/2

Iron Test Strips

Ferrous ions are an indicator of the corrosion of steel as they are formed when the iron oxidises as a result of a corrosion cell formed between the steel and oxygen in the presence of water. The ferrous ion test strips will also indicate the concentration of ferrous ions in a sample solution in the same way as the chloride strips.

Technical Specification

Part Number	Description
T13820563	100 x Iron Test Strips

Elcometer 138/2

pH Test Strips

These strips will determine if a solution or surface is acid or alkaline in nature. Acids form when certain gases are dissolved in water, for example chlorine in water produces hydrochloric acid, carbon dioxide in water produces carbonic acid, sulphur dioxide in water produces sulphuric acid all of which are corrosive to steel.

The presence of these contaminants can either be detected in a solution washed from the surface or by putting a wet pH Test Strip on to the dry surface. pH does not measure the concentration but it does indicate how acidic or alkaline the surface is. Alkaline surfaces are normally associated with either concrete surfaces that are to be coated or steel re-enforcement bars buried in concrete.

Part Number	Description
T13820562	100 x pH Test Strips

elcometer

Chloride Ion Test Kit for Surfaces

Elcometer 134S

Chloride salts left on the surface before the first coat is applied can result in the coating system being forced off the surface by corrosion or blistering before the full life of the coating has been reached. To ensure that the chloride has been removed it is essential that the surface is tested before the coating is applied.

Elcometer 134S test method: a latex sleeve is filled with a Chlor*Rid extract solution and stuck to the test surface where the solution is worked against the surface to extract the salts. The titration tube is inserted and the results can be recorded.

STANDARDS:
ISO 8502-5, SSPC Guide 15

Technical Specification

Part Number	Description
E134----1	Elcometer 134S Salt Detection Kit for Blast Cleaned Surfaces
Measuring Range	1 - 60µg/cm² (1 - 60ppm)
Scale Resolution	1µg/cm² (1ppm)
Tests per Kit	5
Dimensions	185 x 125 x 110mm (7 x 5 x 4.5")
Weight	250g (9oz)
Packing List	5 x test kits each containing: titration tube snapper, strap, clip, pre-measured bottle of Chlor*Rid extract solution, sleeve, titration tube and operating instructions

How to use a Chloride Ion Test Kit for Surfaces
1. Remove cap from CHLOR*EXTRACT solution bottle and pour entire contents into the test sleeve.
2. Firmly apply test sleeve to test surface, allowing extract solution to come into contact with test surface.
3. Insert the titration tube into the test sleeve.
4. Insert sleeve with extract solution and titration tube into the hole previously made in the box lid and wait 1½ minutes.
5. Immediately remove and read the number on the titration tube at the interface of the colour change. Pink is normal, white is the chloride level.

CSN Chloride, Sulphate & Nitrate Kit

The Elcometer 134 CSN Salt Kit is designed to accurately measure surface chloride, sulphate and nitrate ions in minutes and offers a single kit solution for testing in the field

All the components of the Elcometer CSN Test Kits are pre-measured and pre-dosed for trouble free testing.

Results are recorded in parts per million (ppm) requiring no complicated calculations. Elcometer 134 CSN tests are all designed to use a ratio of 1:1 for easy conversion to µg/cm².

Supplied in an ABS plastic carry case for easy portability around the site, each field kit is supplied with full instructions attached to the inside lid, together with:
- 5 x Chloride tests
- 5 x Sulphate tests, together with 1 x colorimeter, for sulphate testing
- 5 x Nitrate test strips
- 5 x Syringes (without needles)

Refill kits are available for all consumables

Technical Specification

Part Number	Description
E134-CSN	Elcometer 134 CSN Chloride, Sulphate & Nitrate Test Kit
Measuring Range	0 - 100µg/cm² (0 - 100ppm)
Scale Resolution	1µg/cm² (1ppm)
Sample Time	1 - 5 minutes (approximately)
Storage Temperature	Not exceeding 25°C (77°F)
Dimensions	360 x 320 x 140mm (14.2 x 12.6 x 5.5")
Weight	1.76kg (3.8lb)
Packing List	5 x tests (containing: 5 x chloride tests, 5 x nitrate test strips, 5 x sulphate tests, 5 x syringes), 1 x colorimeter, carry case and operating instructions

ISO 8502-3 Dust Tape Test Kit

Elcometer 142

The Elcometer 142 Dust Tape Test kit allows assessment of the quantity and size of dust particles on surfaces prepared for painting. Dust on blast cleaned surfaces can reduce coating adhesion, leading to premature coating failure and sub-standard coating finish

Used in conjunction with the Elcometer 145 Dust Tape Roller the kit can be used in accordance with the recommendations of BS EN ISO 8502-3 either as a pass/fail test or as a permanent record of the presence of dust. Supplied in a carry case for use in the field to assess surface cleanliness

STANDARDS:
AS3894.6-C, IMO MSC.215 (82), IMO MSC.244 (83), ISO 8502-3, US Navy PPI 63101-000

Technical Specification

Part Number	Description		
E142----1	Elcometer 142 ISO 8502-3 Dust Tape Test Kit		
Measuring Range	Chart with dust classes ranging from 0 - 5 with descriptions for accurate class placement		
Dimensions	210 x 297mm (8.27 x 11.69")	Weight	250g (9oz)
Packing List	Microscope with 10x magnifie , 2 batteries (LR14), graticule, adhesive tape to specification ISO 8502-3, comparator display board, dust assessment plate, test record sheets (pack of 25) and operating instructions		

Accessories

T14219451	Test Record Sheet

Surface Preparation - Cleanliness

Elcometer 139

Amine Blush Swab Test Kit

When using amine cured epoxy resin coatings in a multi-layer system, if the original coating cures in a low ambient temperature and/or in a high humidity environment, problems - referred to in the industry as amine blush can develop. The presence of amine blush can lead to inter-coat adhesion failures if the film is re-coated.

The Elcometer 139 Amine Blush Swab Test Kit is a rapid colorimetric test designed solely for the use in the quick and immediate identification of amine blush (carbamates) on the surface of coatings using surface swabs. The presence of amine blush is indicated by a visual change of colour of the test solution when compared with a control sample.

Technical Specification

Part Number	Description		
E139----A	Amine Blush Swab Test Kit		
Dimensions	172 x 110 x 100mm (6.75 x 4.25 x 4.00")	Weight	350g (12.3oz)
Packing List	20 x Polystyrene Sampler Test Tubes of 1.0ml (0.035fl oz) buffer solution, 1 x Test tube of Diluent Part A solution, 1 x Test tube of Diluent Part B solution, 2 x Diluent Transfer Pipettes, 3 x Test Part A dropper bottles - containing ACh-E powder (freeze dried), 3 x Test Part B dropper bottles - containing ATC powder (freeze dried), 1 x Test Part C dropper bottle - containing Chromogen DTNB solution,1 x Bottle of Swab Solution - containing 25ml (0.89fl oz) of rubbing alcohol (70% IPA), 20 x Cotton Swabs (q-tips), 2 x Swab Templates - 2.54 x 2.54cm (1 x 1"), 1 x Pair of Tweezers, 1 x Re-sealable plastic bag for content disposal, 1 x User Guide.		

Elcometer 139

Amine Blush Chip Screen Test Kit

The Elcometer 139 Amine Blush Chip Screen Test Kit is a rapid colorimetric test designed solely for the use in the quick and immediate identification of amine blush (carbamates) on the surface of coatings using a cotton swab. The presence of amine blush is indicated by a visual change of colour of the test solution when compared with a control sample.

The Elcometer 139 determines whether amine blush is or is not present on the coating's surface.

Technical Specification

Part Number	Description		
E139----C	Amine Blush Chip Screen Test Kit		
Dimensions	172 x 110 x 100mm (6.75 x 4.25 x 4.00")	Weight	310g (10.9oz)
Packing List	20 x Polystyrene Sampler Test Tubes of 1.0ml (0.035fl oz) buffer solution, 1 x Test tube of Diluent Part A solution, 1 x Test tube of Diluent Part B solution, 2 x Diluent Transfer Pipettes, 3 x Test Part A dropper bottles - containing ACh-E powder (freeze dried), 3 x Test Part B dropper bottles - containing ATC powder (freeze dried), 1 x Test Part C dropper bottle - containing Chromogen DTNB solution, 1 x Scissors 1 x Re-sealable plastic bag for content disposal, 1 x User Guide.

elcometer

Moisture

The measurement of moisture within the protective coatings industry, is often vital to the successful application of a coating and critical to the resulting quality, performance and life span of the coated product.

Moisture: The presence of moisture within a material will result in poor adhesion, premature coating failure and poor appearance. For example, applying a powder coating to a damp wooden panel will cause steam to be created when the panel passes through the curing oven, thus causing damage to the coating.

Moisture

Elcometer 7000

Digital Moisture Meters

The Elcometer 7000 range offers accurate and easy to use moisture measurement. Available with pin probes only or pin probes with a non-invasive probe for non-destructive testing, the gauges give average moisture content by comparing the change in impedance between damp and acceptably dry substrates.

- Calibrated ready for use
- Instant readings on a clear, easy to read scale
- Fully portable, battery operated and non-destructive

Technical Specification			C
Model	Elcometer 7000S Concrete Moisture Meter	Elcometer 7000PS Digital Moisture Meter	Certificat
Part Number	G7000S	G7000PS	○
Measuring Range	70 to 999 relative (non-invasive) Dry (green); 70 - 169 At risk (yellow); 170 - 199 Wet (red); 200 - 999	70 to 999 relative (non-invasive) Dry (green); 70 - 169 At risk (yellow); 170 - 199 Wet (red); 200 - 999 7.9% to 99% WME (pin measurement) Dry (green); 7 - 16.9 At Risk (yellow); 17 - 19.9 Wet (red); 20 - 99.9

Display	LCD Display with separate colour indicators		
Dimensions	175 x 48 x 50mm (7.0 x 1.9 x 2.0")	190 x 70 x 49mm (7.5 x 2.75 x 1.9")	
Weight	195g (7oz)	225g (8oz)	
Power Supply	9V battery (~ 20 hours continuous use)		
Packing list	Elcometer 7000 Moisture Meter, HD MC probe (Model PS), Deep Wall probe 127mm (5") (Model PS), pin calibration check (Model PS), wood calibration chart (Model PS), battery, carry case and operating instructions		

Types of Moisture Meters

On porous materials such as concrete, plaster, brick, wood, the moisture content of the substrate should be measured, as the presence of moisture within a material will result in poor adhesion, premature coating failure and poor appearance.

It is not sufficien to simply ensure that the surface is dry as often the surface of the substrate is the driest point – due to evaporation. It is important to establish the moisture content within the substrate itself.

When powder coating wooden panels, for example, if the wood (or mdf) has too high a moisture content, as the panel passes through the oven, the moisture is heated, generating steam – causing significant coating finish issues

Applying a coating to a concrete floor which is too damp can cause premature adhesion failure. Moisture meters have been developed to specifically determine the level of moisture in a substrate and come in two forms:

Pin-type moisture meters: Invasive pins are pushed firmly into the surface of the substrate being measured and by measuring the electrical resistance between the pin electrodes provide the percentage moisture content (%MC) in the substrate.

Pinless, contact-type moisture meters: Whilst pinless meters typically measure moisture content faster and are non-destructive they do require a relatively flat surface because the sensors are mounted on the base of the gauge making them ideal for concrete.

○ Optional Calibration Certificate available for Elcometer 7000PS Digital Moisture Meter onl

Pinless Moisture Meter

Elcometer 7410

The Elcometer 7410 is an accurate and easy to use non-invasive instrument for non-destructive measurement of moisture content of concrete.

The electrodes transmit parallel low frequency signals, calibrated to give average moisture content by comparing the change in impedance between damp and acceptably dry concrete.

• Calibrated ready for use on concrete
• Instant readings on a clear, easy to read scale
• Fully portable, battery operated and non-destructive

Surface Profile	Climate Monitoring	Coating Thickness	ElcoMaster®
The Elcometer 224 digital surface profile gauge, available as either integral or separate probe versions, is faster than ever before.	The Elcometer 319 dewpoint meter records all the critical climate parameters for the coatings professional: surface, air & dewpoint temperatures, %RH & ΔT.	Up to 40% faster than other coating thickness gauges, the new Elcometer 456 provides you with accurate and repeatable readings. Integral & separate probes available.	ElcoMaster® is the simple yet powerful software solution; combining all your inspection results in one professional report, instantly.

Climatic Conditions

Temperature, Relative Humidity & Dewpoint

Monitoring climatic conditions, such as temperature, relative humidity, dewpoint and moisture, is often vital to the successful application of a coating and are critical to the resulting quality and performance of the coated product.

Climatic Conditions: Elcometer offer a complete range of dewpoint and relative humidity meters, thermometers, dataloggers, moisture meters and anemometers to monitor climatic conditions.

In the protective coatings industry, moisture can form on the surface when the surface temperature is low enough to cause condensation from the atmosphere. The Dewpoint temperature (Td) is the point at which this occurs.

Monitoring the surface temperature (Ts) relative to the air temperature (Ta) and its relative humidity (%RH) allows the dewpoint temperature to be calculated and compared to the surface temperature. This difference in temperature (TΔ) is the key parameter dictating when it is safe to apply the coating.

RH	% Relative Humidity
Ts	Surface Temperature
Ta	Ambient Air Temperature
Td	Dewpoint Temperature
TΔ	Difference between Td and Ts
Tdb	Dry Bulb Temperature
Twb	Wet Bulb Temperature
Te	External Temperature
SH	Specific Humidity

Climatic Conditions

Elcometer 319   Dewpoint Meter

This rugged gauge is designed to measure and record all relevant climatic parameters required to determine whether the conditions are suitable for painting.

A hand-held Dewpoint meter with both manual and automatic data logging in one gauge

Integrated magnets allow the gauge to be attached to the substrate during remote logging

Visual and audible indication of user defined limits for any or all parameters

Stores 25,000 records in up to 999 batches

Robust temperature sensors

Easy to use, intuitive menu structure

Dustproof and waterproof gauge with fully sealed sensors (equivalent to IP66)

Gauges can be recertified at Elcometer Authorised Service Centres

Suitable for use in Cloud Computing

Climatic Conditions

Elcometer 319   **Dewpoint Meter**

Accurate

- Meets ISO 8502-4
- Each instrument is supplied with a Calibration Certificat
- Readings are switchable between Celsius and Fahrenheit
- All readings are time & date stamped

Simple

- Easy menu-driven user interface in multiple languages
- Clear, illuminated display showing up to five user-defined parameter
- Arrow indicators show temperature trends

Flexible

- The gauge can be used as either a hand-held Dewpoint meter or as a remote data logging monitor[†]
- Integrated K-Type connector allows measurement of surface temperature during remote logging using a remote probe
- Using an external probe the "Te" mode transforms the gauge into a thermometer - ideal for measuring temperature of a paint prior to application
- Hold/freeze function allows manual readings to be reviewed before being added into the memory

Durable

- Safe use in climates ranging between -20°C (-4°F) and +80°C (+176°F)
- Waterproof and dust proof rating equivalent to IP66
- Rugged and ergonomic design, re-engineered sensors have greater durability for an extended life

Versatile

- Rapid response time
- Data can be downloaded to a PC via USB or Bluetooth® and evaluated using ElcoMaster® Software[†]
- Each gauge can be powered by either 2 AA batteries (for up to 400 hours[#] use) or directly via the USB cable
- Adjustable limits can be set for each measurement parameter which trigger visual and audible alarms whenever a limit is exceeded
- Intelligent memory calculates total available logging time when using batches
- Gauges can be recertified at Elcometer Authorised Service Centres

[†]Model T only.

[#]Based on 1 reading every 10 minutes in logging mode.

Te - Ideal for use as a simple thermometer

Waterproof and rugged to IP66

Digital Hygrometers

The **Elcometer 308 Hygrometer** has been specifically designed for use in very hot climates where the surface temperature of the substrate can exceed the paint manufacturer's recommended limits for successful painting.

Painting outside recommended limits can have a detrimental affect on the performance and lifetime of the coating. The Elcometer 308 Hygrometer provides a simple and fast measurement of relative humidity and surface temperature.

The **Elcometer 309 Delta T Hygrometer** provides a simple and fast measurement of the two critical climate parameters within coatings:

- Delta T ($T\Delta$): The differenc between the surface temperature (Ts) and the dewpoint temperature (Td). When $T\Delta$ is less than 3ºC (5ºF) painting should not occur.

- Relative Humidity (RH): Expressed as a percentage, RH is the ratio of the amount of water vapour actually held by the air compared to the maximum amount of water vapour the air could hold at a given temperature. Typical maximum RH values specifi d by paint manufacturers are between 75% and 85%.

Whirling & Sling Hygrometers

Elcometer 116

These instruments are designed to determine the dewpoint and relative humidity at any given time.

The Elcometer 116A Whirling Hygrometer is available in Celsius scale only. A guide for relative humidity (RH) determination is supplied with each instrument and the dewpoint can accurately be obtained using the Elcometer 114 Dewpoint Calculator.

The Elcometer 116C Sling Hygrometer, shown as the black unit in the photograph, is a convenient, self contained instrument with an inbuilt slide rule for the calculation of %RH and dewpoint. It has spirit filled thermometers and is available in °C or °F scales.

• Manual operation
• Spirit filled thermometer

Magnetic Thermometers

The Elcometer 113 Magnetic Thermometer continuously indicates the surface temperature of steel and other magnetic material.

The thermometers are based on a bimetallic strip and therefore do not require batteries but do require time to adjust to the temperature.

The Elcometer 113 is available in a number of scale ranges and as an economy version.

Digital Pocket Thermometer

Elcometer 212

The Elcometer 212 is a digital, pocket size thermometer ideal for day to day use.

Incorporating a fast response stainless steel liquid or surface probe, the Elcometer 212 provides temperature readings in under four seconds.

Housed in a water resistant case with integrated rubber seals and a moulded flush window, preventing dirt and leaks damaging the LCD display, the Elcometer 212 is ideal for use in the harshest of environments.

The probe conveniently folds back into the side of the instrument, preventing damage when not in use.

- Liquid or surface probe options available
- User switchable between °C and °F
- Resolution can be set to 0.1°C (0.1°F) or 1°C (1°F)

IR Digital Laser Thermometer

The Elcometer 214 is a simple, easy to use, non contact thermometer which safely and accurately measures surface temperature of non-reflective materials using infrared technology.

With a user switchable measuring range -35°C to 365°C or -31°F to 689°F, a digital display of the temperature is produced in less than one second.

• Non-contact technology with laser spot indicator
• °C / °F user switchable
• Fast, 1 second scanning of any surface
• Measure objects as small as 25mm (1")
• Distance-to-Target Ratio of 8:1
• Easy to read LCD display

The Elcometer 214 IR Digital Laser Thermometer has a D/T ratio (Distance-to-Target) of 8:1 and measures the emitted energy from a target spot one-eighth the size of the working distance.

As can be seen in the diagram below, if the distance from the sensor optics to the target is 200mm (8") for example, the diameter of the measured area is 25mm (1").

Climatic Conditions

Elcometer 320

supplied with
ElcoMonitor™
Climate Monitoring System

The Elcometer 320 is a powerful system which accurately and remotely monitors climatic parameters.

Each red, yellow, green signal tower has an integrated alarm providing both visual and audible warnings

Remotely monitor and record climatic parameters:
- Relative humidity
- Ambient air temperature
- Surface temperature
- Specific humidit
- TΔ (the difference between surface temperature and dewpoint)

The Elcometer 320 can also be used as a stand alone environmental warning station - ideal for single zone monitoring

Up to 254 monitoring stations can be set up remotely either by Bluetooth® or over an Ethernet TCP/IP connection

Climate Monitoring System

The Elcometer 319 is connected to a signal tower and alarm via an embedded PC which is connected to the control and monitoring computers via standard Ethernet TCP/IP or by Bluetooth® for remote monitoring.

Through the simple use of the internationally recognised red, yellow, green traffi light sequence, ElcoMonitor™ allows Quality Managers to see, at a glance, the environmental conditions of up to 254 locations from the comfort of their offic chair.

ElcoMonitor™ software incorporates Set Up Wizards which guide the User through the initial set up of each Elcometer 320 Monitoring Station. Once a station has been assembled and switched on, ElcoMonitor™ searches for all the active monitoring stations.

Each station can be set up remotely using ElcoMonitor™ Software.

Station set ups include:
- Which two climate parameters to be used for each station
- User definable red, yellow and green warning limit
- Flashing red light additional warning parameter
- Data recording frequency
- Warning buzzer alarm duration

Username and passwords are used to ensure that only approved administrators can amend the set up of each station.

All measurement values (RH, SH, Ta, Ts, TΔ) from each station are transmitted back to ElcoMonitor™ allowing remote investigation of all the environmental conditions.

Individual reports for each monitoring station can be generated from within ElcoMonitor™ or archived in spreadsheet form for further analysis.

T41021406   Replacement Impeller

Oven Temperature Profiling
Temperature profiling provides an effective method for measuring the actual environmental and product temperature during the cure process - essential for **ensuring quality finish and a successful cure** of a powder coating.

Not all components are alike, and are rarely of a uniform thickness, density or thermal capacity. This means that the oven temperature settings have to be adjusted to suit the coated product.

Monitoring and making adjustments to the oven temperature ensures that the product is brought to and held at, the specified temperature to ensure consistent quality of cure and visual properties at all times.

Incorrect oven temperature settings can lead to some or all of a product being too hot or too cold leading to under cure, coating burn, poor adhesion, discolouration, loss of gloss and other visible defects.

With a selection of magnetic or clamp type air & surface temperature probes, temperatures can be monitored both on or around the product and recorded by a data logger during the cure process. Once completed the measurement data can be transferred to the ElcoMaster® software to provide instant oven profile reports, process validation and much more.

Oven Temperature Profiling

Elcometer 215 — **Oven Data Logger**

The Elcometer 215 is the easy to use oven temperature profile solution, used to measure and store the temperature profiles of both the sample and the oven during the cure process.

Memory stores up to 260,000 readings

Large menu-driven display for easy operation

Start and stop logging at a pre-set temperature

Ideal for testing for powder or liquid coatings in batch or conveyor ovens

Measure up to 6 different temperatures at one time

Variable measurement interval, date, time, °C / °F

Print full colour report directly to any HP printer

Ideal in situations where powder coated thickness is inconsistent

Quick display shows maximum temperature, Cure-Index figure and pass/fail for each probe

High temperature resistant teflon coated probe cables are easy to clean after each run

elcometer

Oven Data Logger

Elcometer 215

The logger display shows maximum temperature and Cure-Index figure, percentage and pass/fail sign, as a value or graphic representation for each probe.

Powerful

- Ideal for testing powder or liquid coatings in batch or conveyor ovens

- Stores up to 260,000 readings

- USB data output to ElcoMaster® software, combines with other key inspection measurements

- Variable measurement intervals, date, time, °C/°F

Efficient

- Measure up to 6 different temperatures at one tim

- Quick display shows maximum temperature, Cure-Index figure and pass/fail for each prob

- Start and stop logging at a pre-set temperature

Rugged

- Standard thermal barrier kits - ideal for single runs

- High temperature barrier and heat sinks available for longer times at high temperature

- Wide range of K-type temperature probes with strong, highly flexible and easy to clean Teflo ® coated cables

Oven Temperature Profiling

Elcometer 215

Oven Data Logger

ElcoMaster® is the easy to use software solution designed specifically for the management and assessment of your temperature profile, allowing you to generate professional inspection reports in seconds. Features include:

High Temperature Barrier Kit
Thermal barrier & heat sinks for longer time at temperature

Standard Thermal Barrier Kit
With thermal barrier - ideal for single runs

Oven Logger Set Up - Create and store unique oven profile setups, name each of the 6 channels, set sampling rates, number of batch runs, start/stop triggers and transfer them to the gauge.

Coating Parameters - Set up a library of individual paint types incorporating min, mid & max cure temperatures as well as the maximum absolute and minimum cross link temperatures.

Coating Datasheets - Save a copy of the coating's data sheet as a permanent record.

Product Probe Maps - Simply drag and drop up to 6 probe ID markers on to your product photo or drawing to record exact probe placement for each production run.

Customisable Templates - Create your own comprehensive inspection profile - simply choose a relevant gauge setup, paint parameter and product probe map from your library and assign them to your logger data, providing instant, meaningful and professional reports.

Elcometer Cure Value - Using the industry accepted cure value calculation ElcoMaster® provides instant Pass/Fail information by comparing the production run temperature to the coating supplier's cure requirements.

Graphical Reporting - Standard temperature profile graph, cure process and individual profile/cure graphs combined with the product probe map are available as standard.

Combined Reports - Fully customisable reports can be quickly generated - allowing oven profile reports to be combined with data from coating thickness, gloss & adhesion gauges.

Powder Thickness

When applying a powder coating, by measuring the uncured film thickness, it is possible to predict the eventual dry film thickness.

Powder coating is an efficien system producing a high quality finish with minimal waste – where excess or over-sprayed powder may be recycled and reused.

Ensuring that the end product has the correct levels of adhesion, gloss and colour - is dependent upon both the thickness of the powder prior to the curing process and the temperature profile within the oven

The cured dry film thickness is determined by the level of shrinkage, which in turn is influenced by factors such as particle size and density of the uncured powder.

As all manufacturers' coatings are different, it is not generally possible to predict the dry film thickness post cure unless the level of shrinkage is known or the pre cure powder density is measured. Measuring the thickness of the uncured powder is difficult.

Whereas wet film measurement is non-destructive, the measurement of powder thickness using any form of contact with the uncured coating, disturbs the powder - altering its thickness.

The revolutionary Elcometer 550 accurately predicts the final powder thickness prior to curing. Through the use of non-contact ultrasound technology the density of the powder can be measured providing a predictive value of the final cured coating thickness

Used on the powder coating the Elcometer 550 gauge therefore offers the opportunity for 'right first time' production and minimal wastage.
Powder Thickness

Elcometer 550

Non-Contact Powder Thickness Gauge

Using third generation proven airborne ultrasonic technology, the new Elcometer 550 accurately predicts cured coating thickness by non-contact measurement of coating powders.

Accurately predicts the cured coating thickness within ± 5% of the reading or ±5µm (±0.25mils) up to 110µm (4.4mils)

Can be used in accordance with ASTM D7378-C

Proven, third generation, airborne ultrasonic technology

Hand-held probe allows easy positioning of the sensor for fast measurement

Tough aluminium case, ideal for testing in an industrial environment

Ergonomic gun designed for comfort when taking multiple readings

Large illuminated colour display with positioning indicator to guide orientation of the sensor probe

Laser targeting system to ensure correct distance from surface

elcometer®

Non-Contact Powder Thickness Gauge

Elcometer 550

By carefully controlling the thickness of powder applied to a product, you can minimise your powder usage and ensure the quality of your coating. As contact measurement options damage the finish and do not predict the cured coating thickness, measuring the powder thickness pre-cure requires a non-contact solution.

Easy to Use
- Easy to read, large colour display
- Adjustable screen brightness for all test conditions
- Ergonomic probe - ideal for continuous testing
- Can be used straight out of the box with minimal set up time
- On-screen guidance graph and handle LEDs help you orientate the probe sensor for fast, accurate measurements

Reliable
- Fast, accurate and repeatable results
- Can be used in accordance with ASTM D7378-Procedure C
- Proven, third generation, airborne ultrasonic technology
- User-programmable set up to account for varying powder shrinkage rates

Enhanced Technology
- Measure thicknesses from 30 - 110µm (1.18 - 4.4mils)
- 1mm² (0.04sq in) measurement area - ideal for flat, curved and small surface
- Test coatings on a wide range of substrates, including metal, wood, MDF, plastic and pre-coated surfaces
- Laser targeting to accurately position the gauge at the correct distance from the surface to be measured

STANDARDS:
ASTM D7378 Procedure C

● Certificate supplied as standard.

Powder Thickness

Elcometer 155

Uncured Powder Film Comb
Available in four scale ranges, the Elcometer 155 is designed to measure uncured powder coating film thickness. This enables the application system to be set up and fine tuned prior to the curing process. In turn, this will reduce the amount of scrap and over-spray.

Note: The thickness of a coating prior to cure is not the same value after curing but there is a correlation. The powder comb is suitable as a guide only.

STANDARDS:
ASTM D7378-A

Technical Specification   C

Packing List	Elcometer 155 Powder Comb and powder comb wallet for two combs		

How to use a powder comb
Place the comb into the powder and slide the comb along the surface. The measurement points (or teeth) are pointed and allow the powder to flow around them.

The thickness of the powder lies between the highest value where a drag mark is visible and the lowest value where a drag mark has not been produced.

* The Elcometer 155 is not available for sale in the USA

○ Optional Calibration Certificate available

Wet Film Thickness

When applying a liquid coating, by measuring the uncured film thickness, it is possible to determine the eventual dry film thickness. Applying too much coating wastes time and materials. It can also affect the performance and finish of the product.

Too much wet film can cause the coating to crack as it cures; too little coating increases the risk that the substrate will not be sufficientl protected, leading to rust spots.

The three methods for measuring wet film thickness are:

- Wet Film Combs
- Pfund Thickness Gauges
- Wet Film Wheels

In each case, the thickness of the coating is measured and the dry film thickness can be estimated using the coating's solid : wet ratio.

Using a wet film com
Place a comb perpendicular to and touching the substrate. Hold the comb in position and wait a few seconds until the teeth are wet. Remove the comb from the film

The wet film thickness lies between the biggest value 'coated' or 'wet' tooth and the smallest value 'uncoated' or 'dry' tooth.

Using a wet film whee
Roll the wheel through a wet coating, the centre wheel eventually touches the film. This point on the scale indicates the thickness. When the volume to solids ratio of the coating is known, generally found on a product data sheet, the wet film thickness can be used to predict the dry film thickness. Roll from maximum to minimum to avoid a false reading caused by surface tension.

Wet Film Thickness

Elcometer 112 & 3236

Hexagonal Wet Film Combs (Stainless Steel)

These hexagonal precision formed stainless steel wet film combs are long lasting, reusable and supplied in a range of thicknesses measuring up to 3000µm (120mils).

These six sided combs vary in size, giving either 24 or 36 measurement steps, depending upon the comb, thus providing increased accuracy.

Wet Film Combs (Stainless Steel)

Elcometer 115

These reusable precision stainless steel combs are made to be long lasting and are supplied with either Metric or Imperial measurements.

Four separate thickness ranges are available up to a maximum of 1270µm or 50mils and are manufactured to an accuracy of 5% or 2.5µm (0.01mil), whichever is the greater.

Each comb has 10 measurement steps (teeth).

STANDARDS:

ASTM D 4414-A, AS/NZS 1580.107.3, BS 3900-C5-7B, ISO 2808-1A, ISO 2808-7B, JIS K 5600-1-7, NF T30-125, US Navy PPI 63101-000, US Navy NSI 009-32

Wet Film Thickness

Elcometer 112AL

Punched Wet Film Combs (Aluminium)

These punched aluminium combs offer the user a low cost method of measuring the wet film thickness

The Elcometer 112AL, being punched from aluminium, is not as accurate as precision formed stainless steel wet film combs and has a shorter lifespan

Supplied in a pack of 10 combs, each comb has Metric (25 - 3000µm) on one side and Imperial (1 - 118mils) on the other.

The Elcometer 112AL can be customised with your logo.

Please contact Elcometer for further details.

Wet Film Wheels

Elcometer 3230

The Elcometer 3230 Wet Film Wheel is a high precision, accurate and easy to use instrument which consists of a set of three wheels. The central wheel is of a smaller diameter and is eccentric relative to the two outer wheels. By rolling the gauge through a wet coating, the centre wheel eventually touches the film. This point on the scale indicates the thickness.

A convenient mounting handle for the wheel is available in two lengths; 15cm (6") or 50cm (19"); please order separately.

When the volume to solids ratio of the coating is known (generally found on the product data sheet supplied by the manufacturer), the wet film thickness can be used to predict the dry film thickness

Several measurement ranges between 0 to 25μm and 0 to 1000μm (0 to 1mil and 0 to 40mils) are available.

• Continuous scale produces ±5% measurement accuracy
• Suitable for flat and curved surface
STANDARDS:
ASTM D 1212-A, AS/NZS 1580.107.3, BS 3900-C5-7A, ISO 2808-1B, ISO 2808-7A, JIS K 5600-1-7, NF T30-125

Wet Film Thickness

Elcometer 3230

Coil Coating Wet Film Wheels

This instrument is similar to the Elcometer 3230 Wet Film Wheel, but is designed for use in the coil coating process. The outer wheels are knurled to allow measurements to be taken on slippery coatings or on fast moving substrates.

By rolling the gauge through a wet coating, the centre wheel eventually touches the film. This point on the scale indicates the thickness.

When the volume to solids ratio of the coating is known (generally found on the product data sheet supplied by the manufacturer), the wet film thickness can be used to predict the dry film thickness

Elcometer 3233

Pfund Thickness Gauge

Available in aluminium or stainless steel this instrument consists of two concentric cylinders, one sliding inside the other. A spherical glass lens, which has engraved measurements, is fitted to the end of the central cylinder and when pressed into the wet film, leaves a circular trace

The diameter of the mark on the lens is measured and, using the supplied conversion table, the thickness of the coating can be easily assessed.

- Ideal for measuring the thickness of wet translucent products such as varnishes, oils etc.
- Measurement range of 2.25 - 360µm (0.09 - 14.17mils)

STANDARDS:
ASTM D 1212-B, NF T30-125

Dry Film Thickness

Dry Film Thickness is probably the most critical measurement in the coatings industry. It provides vital information as to the expected **life of the substrate, the product's fitness** for purpose, its appearance and ensures compliance with a host of International Standards.

In 1947, Elcometer launched one of the world's first non-destructive coating thickness gauges, the Elcometer 101.

For more than 6 decades, the design and production qualities of this rugged and reliable instrument have been the watchwords for all our products and these philosophies are still held today.

Elcometer has a comprehensive range of Dry Film Thickness gauges to meet all of your coating inspection requirements, including:

Electronic (Type II); the most widely used as it is generally the most accurate and can be used to measure the coating on almost any substrate, whether ferrous or non-ferrous

Mechanical (Type I); still widely used, particularly in areas where no electrical instruments are permitted or high temperatures prevail

Destructive; used primarily in multi-coat procedures and non-metallic substrates

Formal quality systems, such as those described in ISO 9000, require gauges to be properly controlled, logged and in calibration. Increasingly, users are specifying that the readings taken by gauges are traceable to National Standards.

There are three types of coating thickness standards available from Elcometer:

Calibration Foils; supplied individually or in sets, these precision foils (or 'shims'), accurately measured to ±1%, offer you the ideal method for adjusting the calibration of your coating thickness gauge on your substrate, taking into account your specific substrate material, surface finish and form, to ensure the greatest possible accuracy. Foils are available with or without a calibration certificate traceable to National Standards (UKAS and NIST).

Coated Standards; mounted in a protective folder, these hard wearing coated ferrous or non-ferrous tiles are ideal for accurately measuring the performance of the coating thickness gauge. Coated standards are accurate to within ±2% and are supplied with a calibration certificate.

Zero Test Plates; in some cases, it may be difficul or impractical to obtain an uncoated substrate. For this reason Elcometer provide a range of zero test plates. These test plates, when used in conjunction with a set of foils, are ideal for accurately measuring the performance of your coating thickness gauge.

Dry Film Thickness - Digital

Elcometer 456   Coating Thickness Gauge

The Elcometer 456 sets new standards; providing reliable and accurate coating thickness measurements; helping you to become more efficient.

Fast reading rate of 70+ per minute, 140+ per minute with Ultra/Scan Probe

Specialised probes to meet a wide range of applications

Coating Thickness Gauge

Rugged

- Sealed, heavy duty and impact resistant

- Dust and waterproof equivalent to IP64

- Scratch and solvent resistant display

- Durable gauge and probe construction

- Suitable for use in harsh environments

Efficient

- Fast reading rate of 70+ per minute, 140+ per minute with Ultra/Scan Probe

- Multiple calibration memories

- Alpha numeric batch identificatio

- User selectable calibration methods

- Compatible with ElcoMaster® and ElcoMaster® Mobile App

Powerful

- Wide range of interchangeable probes

- USB and Bluetooth® data output to iPhone† or Android™ devices

- Stores up to 150,000 readings in 2,500 batches

- Measures up to 31mm (1220mils) of coating on metal substrates

Paperless Quality Assurance with the ElcoMaster® suite of products

Android™

Made for
iPod iPhone iPad

†Compatible with iPod, iPhone and iPad.

Elcometer 456 Models S & T: Made for iPhone 6 Plus, iPhone 6, iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPhone 4, iPad Air 2, iPad mini 3, iPad Air, iPad mini 2, iPad (3rd and 4th generation), iPad mini, iPad 2, and iPod touch (4th and 5th generation). "Made for iPod," "Made for iPhone," and "Made for iPad" mean that an electronic accessory has been designed to connect specifically to iPod, iPhone, or iPad, respectively, and has been certified by the developer to meet Apple performance standards. Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards. Please note that the use of this accessory with iPod, iPhone, or iPad may affect wireless performance.

Elcometer 456

Coating Thickness Gauge

Scan Mode

When the Scan Mode* is selected users can slide the Ultra/Scan probe over the entire surface area. As the probe is lifted off the surface the gauge displays the average coating thickness value, the highest thickness and the lowest thickness values. Each set of three readings (average, high and low) can be displayed on the run graph and stored into the memory.

During each scan the Elcometer 456 displays the live thickness reading together with an analogue bar graph which graphically indicates the thickness relative to both the nominal thickness and any user-defined limits

Scan Mode* stores the average, highest and lowest readings over a test area
During a scan the live reading together with an analogue bar graph is displayed
The Run Chart displays the average thickness as well as the highest and lowest readings for each scan

Auto Repeat Mode

When the Ultra/Scan Probe is slid over the coated surface in Auto Repeat Mode*, a reading is taken approximately every half a second. Each individual reading is stored into the memory.

With a reading rate in excess of 140 readings per minute the Auto Repeat Mode can significantly speed up the inspection of large coated areas

Auto Repeat Mode* measures and stores into memory over 140 individual readings per minute

The gauge updates and displays the statistical values as each individual reading is taken
The Run Chart displays each individual reading allowing the user to identify any significant trends

* Scan and Auto Repeat Modes require an Elcometer 456 Model T gauge with Ultra/Scan Probe.

Coating Thickness Gauge

Elcometer 456

Ultra/Scan Probe

Featuring a highly durable 'snap on' replaceable probe cap, the Elcometer 456 Ultra/Scan Probe is a revolutionary design which allows users to take individual readings or rapidly scan large surface areas - without damaging the probe or the coating.

When used in conjunction with the Elcometer 456 Scan or Auto Repeat Modes* the Ultra/Scan Probe enables users to significantly reduce inspection times without affecting accurac .

The Ultra/Scan Probe uses the Elcometer 456's patented offset feature[+], ensuring that any cap wear during use[#] is incorporated within the calibration process. The gauge even informs the user when to replace the cap.

The Ultra/Scan Probe with replaceable end caps for increased durability

Counted Average Mode

The Elcometer 456 Model S and Model T are supplied with the Counted Average Mode. Once the user has defined the number of individual gauge readings to be taken within a spot measurement, the gauge stores the average of the individual gauge readings into the memory.

Fixed Batch Sizes

The Fixed Batch Size feature within the Elcometer 456 Model T allows users to define the maximum number of readings in each batch. Once the maximum number of readings has been reached the gauge automatically opens up a new batch which is linked to the previous batch (name-1, name-2, etc.).

Counted Average and Fixed Batch Sizes can be used with all Elcometer 456 probes

---

Working with Standards and Test Methods

International Standards and test methods often describe the number of individual gauge readings to be taken in a spot measurement and/or the number of spot measurements required over a defined surface area.

SSPC PA2 requires a minimum of three gauge readings to be taken per spot measurement and five spot measurements over 10 ^{2} (~100ft^2).

The Elcometer 456 Model S or Model T can be set with a counted average of three and a fixed batch size of five to meet these requirements. Each batch defines an area of measuremen

When the Ultra/Scan Probe is connected to the Elcometer 456 Model T with Auto Repeat Mode selected, SSPC PA2 (or similar test methods) can be completed more than 40% faster.
* Scan and Auto Repeat Modes require an Elcometer 456 Model T gauge with Ultra/Scan Probe.
+ Patent Number US6243661
# When tested on smooth surfaces probe end caps have been scanned in excess of 50km (30 miles).

Elcometer 456

Integral & Separate model range

The Elcometer 456 is available in three different models. Each gauge provides the user with increasing functionality - from the entry level Elcometer 456 Model B, to the top of the range Elcometer 456 Model T.

Integral gauges are ideal for single handed operation as the wide footprint of the Bigfoot™ internal probe provides greater stability during measurement - allowing for consistent, repeatable and accurate results.

i Separate models, with their wide range of probes, provide even greater measurement flexibilit .

Integral Model Options   C

Scale 1	Range: 0-1500µm (0-60mils)		Accuracy*: ±1-3% or ±2.5µm (±0.1mil)	
	Resolution: 0.1µm: 0-100µm; 1µm: 100-1500µm (0.01mil: 0-5mils; 0.1mil: 5-60mils)			

	Model B	Model S	Model T	Certificat

Probe range   Elcometer 456

All Elcometer 456 probes are fully interchangeable and are available in a number of designs and scale ranges to meet your specific application.

Straight Probes
Measures coatings on both flat and curved surfaces

Mini Probes
Ideal for measuring coatings on edges, narrow pipes or small surface areas

Right Angle Probes
For taking readings where access is restricted

PINIP™ Probes
Plug-in probes convert a separate gauge into an integral gauge

Telescopic Probes
Extending right angle probes for out of reach areas

Ultra/Scan Probes
These probes are fitted with replaceable probe caps - allowing users to take individual readings or scan large surface areas without damaging the probe

Waterproof Probes
Sealed for use underwater at depth, even in diving gloves

High Temperature Probes
For use on hot coated materials up to 250°C (480°F)

Anodiser Probes
Chemical resistant washable probes - ideal for the anodising environment

Armoured Probes
Probes with metal reinforced heavy duty cables, reducing the risk of cable damage

Soft Coating Probes
Large surface area probes for soft reach materials (HVCA approved)

Specialist Probes
These probes are designed for measuring on specialist substrates, such as graphite, or electroplated components

Ferrous probes measure non magnetic coatings on ferro-magnetic substrates. Elcometer 456 ferrous gauges accept any ferrous probe. Non-ferrous probes measure non conductive coatings on non-ferrous metal substrates and Elcometer 456 non-ferrous gauges accept any non-ferrous probe. Dual FNF probes measure both ferrous and non-ferrous applications with automatic substrate detection. Elcometer 456 FNF gauges accept all ferrous, non-ferrous and dual FNF probes.

Elcometer probes have a maximum operating temperature of 80°C (176°F) with the exception of separate ferrous probes 150°C (300°F) and Hi-Temperature PINIP's 250°C (480°F). The stated temperature is the substrate temperature, and the duty cycle of the probe must be reduced to ensure a minimal temperature build-up within the probe.

i All Elcometer probes are supplied with a Test Certificate and a set of calibration foils appropriate to the scale range of the probe.

Dry Film Thickness - Digital

Elcometer 456

Accessories

Jumbo Hand Grip
Ideal for precision placement for the most accurate results on flat and curved surfaces. Place the probe inside the Jumbo Hand Grip and take measurements - ideal when wearing gloves. Suitable for any Elcometer 456 Scale 1 or Scale 2 straight probes.

V-Probe Adaptor
Ideal for precision placement for the most accurate results on medium and large diameter curved surfaces such as pipes and cylinders. Suitable for any Elcometer 456 Scale 1 or Scale 2 straight probes.

F and N Probes	Dual FNF Probes	
T9997766-	T99913225	Jumbo Hand Grip
T9997381-	T99913133	V-Probe Adaptor

Ultra/Scan Probe Replacement End Caps
Highly durable - when tested on smooth surfaces probe end caps have been scanned in excess of 50 km (30 miles) - each end cap snaps on to the end of the Ultra/Scan probe significantly enhancing the lifetime of the probe

F & Dual FNF Probes	
T456C23956	Replacement Ultra/Scan Probe End Caps (3 per pack)

Probe Placement Jig
The Elcometer probe placement jig is the ideal accessory for measuring coatings on small or complex components when the highest levels of repeatability and accuracy are required.

T95012880	Probe Placement Jig

Each probe placement jig is supplied with a probe housing and a component holder to suit Scale 1 or Scale 2 straight probes.

T95013028	Component Hand Vice
T95012888	Cable Release Assembly - ideal for remote measurements
T95015961	Dual FNF Probe Housing Adaptor
T95016896	Mini Probe Housing Adaptor

Calibration Foils/ Coated Standards/ Zero Test Plates
Elcometer offers a range of individual precision foils, foil sets, coated thickness standards and zero test plates to ensure the greatest possible accuracy.

Data Output Controller

Enables data to be output from the Elcometer 456 via RS232 ports for the purposes of controlling automated production lines.

The Elcometer Software Support Team, or users can produce their own customised software to utilise the data output from the Elcometer 456 gauge in order to remotely trigger pass/fail criteria for their processes.

Part Number	Description
T99925387	Elcometer Data Output Controller
Operating Temperature	0 to 50°C (32°F to 122°F)
Data Input	USB
Data Output	One RS232 serial output via 9 way D-Type connector
Power Supply	Requires 5V 1A(min) DC supply via mini USB. External plug-in mains adapter with interchangeable UK/EU/US/AUS pins supplied.
Packing List	Elcometer Data Output Controller, USB to RS232 converter lead, power supply (with 4 sets of interchangeable pins)

Data Output Controller

The Elcometer 456 coating thickness gauge probe is attached to a robot arm, to automatically measure dry film thickness on the production line.

The Elcometer 456 connects to the data output controller to transfer live dry film thickness readings via RS232 ports to the automated production line.

Customised software for the data output controller can be produced, using high/low limits to trigger a pass or fail on the automated production line, helping to improve quality.

Dry Film Thickness - Digital

Elcometer 456

IPC Dry Film Thickness Gauge

The Elcometer 456 Industrial Protective Coating Thickness Gauge is pre-calibrated to measure DFT on shot or grit blasted steel substrates.

STANDARDS:
ASTM D7091, ISO 2808, ISO 19840, SSPC PA-2, US Navy NSI 009-32

new

Pre-calibrated with 4 profile ranges

Profil	Metric	Imperial
Smooth	0-25µm	0-1mil
Fine	25-60µm	1-2mils
Medium	60-100µm	2-3mils
Coarse	>100µm	3-4mils

Displays 3 individual readings together with their average in microns or mils

Built in integral probe for stable, repeatable readings on flat or curved surface

Easy to use menu structure in multiple languages:

English, French, Gernan, Dutch, Spanish, Chinese & Japanese

USB or Bluetooth® data output to the ElcoMaster® App or your own software application

IPC Dry Film Thickness Gauge

Elcometer 456

Pre-calibrated with 4 profile ranges, the Elcometer 456 IPC Gauge is fast and very easy to use.

- No need to calibrate just select the relevant surface profile and star measuring

- Easy to use straight from the box - minimal training required

- Readings can be transferred via Bluetooth® or USB to ElcoMaster® or your own software application for instant report generation and record keeping

Elcometer 415

Paint & Powder Coating Thickness Gauge

The Elcometer 415 Industrial Paint & Powder Thickness Gauge provides simple, fast and accurate coating thickness measurements on smooth & thin industrial paint and powder coated surfaces.

STANDARDS:
AS2331.1.4, AS/NZS 1580.108.1, ASTM B 499, ASTM D 1186, ASTM D 1400, ASTM D 7091, ASTM E 376, BS 3900-C5-6A, BS 3900-C5-6B, BS 5411-11, BS 5411-3, BS 5599, DIN 50981, DIN 50984, ECCA T1, EN 13523-1, ISO 2360, ISO 2808-12, ISO 2808-6A, ISO 2808-6B, ISO 2808-7C, ISO 2808-7D, JIS K 5600-1-7, NF T30-124

new

- Large easy to read values in microns or mils
- 1 point & 2 point calibration ensures accuracy on smooth & thin coated substrates
- Easy to use, ergonomic design provides maximum comfort for continuous use
- Incredibly fast (60+ readings per minute), reducing inspection times, increasing productivity
- Measures cured paint & powder coatings up to 1000µm (40mils)

2 YEAR* WARRANTY

- Auto rotating large colour display provides clear visibility whatever the angle of measurement
- Scratch, solvent & powder resistant display
- Transfer live data via USB or Bluetooth® to ElcoMaster® for instant report generation
- Rugged & resistant to powder coatings ingress equivalent to IP64
- Automatically switches between ferrous & non-ferrous substrates[1]

Ideal for measuring dry film thickness on thin coated substrates.

360° auto rotating display for a clear reading at any measurement angle, on the production line or QA station.

Transfer live data via Bluetooth® to PC, Android™ or iOS mobile devices.[2]

Paint & Powder Coating Thickness Gauge

Elcometer 415

In addition to the coating thickness, the Elcometer 415 displays the key statistical values required to assess overall industrial finishing; number of readings (n), average coating thickness ($\bar{x}$), the lowest (Lo) and the highest (Hi) paint thickness.

The Elcometer 415 is easy to use and has 1 point & 2 point calibration, ensuring accurate measurements on smooth & thin industrial paint & powder coated surfaces.

Robust, durable & powder resistant, the Elcometer 415 is available with a 2 year* manufacturer's warranty; giving you peace of mind.

As each measurement is taken, the Elcometer 415 instantly transmits the thickness values via Bluetooth® [2] or USB straight into an inspection application or into ElcoMaster®, Elcometer's Mobile App, for instant report generation.

Dry Film Thickness - Digital

Elcometer 311

Automotive Paint Gauge

The Elcometer 311 Automotive Paint Meter is the fastest automotive paint gauge on the market today, used to instantly measure paint thickness and provide an indication of the overall condition of paint work.

new

Large easy to read values in mils & microns

Scratch, solvent & water resistant colour display for protection against accidental damage

Fast reading rate of 60+ readings per minute significantly reduces inspection times

Dust & waterproof rugged design equivalent to IP64, ideal for measuring in wet or dry conditions

Wirelessly connect the Elcometer 311 via Bluetooth® to your own inspection app or ElcoMaster® for seamless reporting[1]

elcometer

2.5 F$_{NF}$ mils

Automatic rotating display allows you to read the thickness value on horizontal & vertical surfaces

Ergonomic design gives you maximum comfort when measuring vehicles all day

Ambient light sensor automatically adjusts the screen brightness to your lighting condition

Automatic temperature compensation accurately measures in desert or alpine conditions alike

Switches instantly to measure coatings on steel & aluminium[2]

2 YEAR* WARRANTY

Durable & impact resistant case clips straight on to your belt

Measures on steel & aluminium body panels [2]

360° auto rotating display for measuring at any angle

Automotive Paint Gauge

Elcometer 311

In addition to the paint thickness, the Elcometer 311 displays the key statistical values[1] used to assess the overall condition of the paint work; number of readings (n), average coating thickness ($\bar{x}$), the lowest paint thickness (Lo) and the Elcometer Index Value (EIV).

The Elcometer Index Value (EIV)[3] provides the inspector with a single number which illustrates the vehicle's overall paint condition and establishes any previous paint work (PPW) which has been undertaken. This quantifiable number determines the extent of rework & the overall quality of the vehicle being appraised.

As each measurement is taken, the Elcometer 311 can transmit the thickness value via Bluetooth®[1] either straight into your inspection application or into ElcoMaster®, Elcometer's Mobile App, for instant report generation.

Robust, durable & weather resistant, the Elcometer 311 is available with a 2 year manufacturer's warranty*.

Elcometer 355

Coating Thickness Gauge

The Elcometer 355's watchwords are accuracy, simplicity, versatility and durability making this a true state of the art hand-held measuring system packed with time-saving and cost-cutting features.

Available as a standard and top model, the unit's large memory stores up to 10,000 readings in batches and data can be output to a PC, datalogger or printer as required.

With a comprehensive range of Probe Modules available, just select the most appropriate for the application. All modules are supplied with calibration foils.

- ±1% or 1μm, whichever is the greater, accuracy
- Rugged aluminium case designed for the toughest environments
- Full statistical analysis - mean standard deviation, number of readings, highest and lowest value
- RS232 output
- Date and time stamp

Coating Thickness Gauge

Elcometer 355

Unique probe modules allow the Elcometer 355 Coating Thickness Gauges to be versatile and flexible for any measurement application

Probe modules can be freely interchanged as required for both ferrous (F) and non-ferrous (N) metal substrates.

Most probe modules are capable of an accuracy of ±1% of the reading on a variety of coatings and surfaces.

Telescopic probes extend from 410mm (16") to 1100mm (43").

	For use with the following Elcometer 355 probes: F1 Standard, F2 Standard, F4 Standard, F5 Rebar, N1 Standard
T9997381-	V-Probe Adaptor - F and N Probes
	For use with the following Elcometer 355 probes: F1 Standard, F2 Standard, F4 Standard, F5 Rebar, N1 Standard

Probe Placement Jig
For the most reliable and repeatable coating thickness measurements, making the gauge score highly in repeatability and reproducibility studies. Ideal for small and large components alike. The probe placement jig is supplied with a probe housing to suit standard F1, F2, F4, F5 and N1 probes. Housings to suit other probes are available as optional accessories.

Part Number	Description
T95012880	Probe Placement Jig
T95013028	Component Hand Vice
T95012888	Cable Release Assembly - ideal for remote measurements
T95015589	N4 Probe Adaptor - must be purchased for use with N4 Probes

Coating Thickness Gauge

Elcometer 101

The original non-destructive dry film thickness gauge, the Elcometer 101 was the world's first portable coating thickness gauge with the original being produced in 1947.

- Insensitive to hot and cold surfaces - ideal for hot sprayed metal coatings

- Incorporates reading hold feature

- Accuracy of ±10%

- Ideal for hazardous areas

STANDARDS:

AS 2331.1.3, ASTM B 499, ASTM G 12, BS 5411-11, ISO 2178, JIS K 5600-1-7, SSPC PA2

Technical Specification			C
Part Number	Description	Scale Range	Certificat
A101A-01A	Elcometer 101 Mechanical Coating Thickness Gauge	0 - 600µm (0 - 25mils)	○
Operating Plane	90° to substrate		
Minimum Measurement Area	38 x 15mm (1.5 x 0.6")		
Minimum Measurement Diameter	25mm (1") (on bar material)

Dry Film Thickness - Mechanical

Elcometer 211

Mechanical Coating Thickness Gauge

The Elcometer 211, commonly referred to as the "Banana Gauge", is a Type I dry film thickness gauge which is not only ideal for use in environments where the use of electronic instruments is difficult e.g. inflammable atmospheres in oil and gas production, but can also be used for underwater coating inspection.

This is one of the most popular mechanical gauges in the world.

- Factory calibrated - with user calibration adjustment
- Foils supplied to check calibration on site
- Ideal for cold surfaces and underwater use
- Small and portable with an accuracy ±5%
- The "V" grooved base, ideal for pipeline inspection
- Available in either Metric or Imperial versions, the Elcometer 211 measures coatings up to 6mm (250mils).

STANDARDS:

AS 2331.1.3, AS 3894.3-A, ASTM G 12, ASTM B 499, AS/NZS 1580.108.1, BS 5411-11, BS 3900-C5-6A, DIN 50981, ISO 2178, ISO 2808-6A, ISO 2808-7A, JIS K 5600-1-7, NF T 30-124, SSPC-PA2

Dry Film Thickness - Foils & Standards

Elcometer 990

Calibration Foils Sets

The Elcometer 990 Calibration Foils are ideal for use in the laboratory, on the production line or on site. Calibration foils or 'shims' are the most convenient way of creating a coating thickness standard on the substrate material, surface finish or form. This is the ideal method for adjusting the calibration of the coating thickness gauge to ensure the greatest possible accuracy.

Features:

- Metric and Imperial values displayed on each foil
- Available individually or in foil sets
- Precision foils with ±1% accuracy
- Each foil has a unique serial number for traceability
- Available in thicknesses from 12.5µm to 20mm (0.5 to 790mils)

Technical Specification

Using calibration foils

Each foil has been independently measured at the centre point.

For the greatest accuracy, place the probe in the centre of the foil.

Up to 4 foils can be combined to create a wider range of thickness values.

[1]The Scale 2B foil sets are designed for soft coating probes and have a larger foil surface area

Coated Thickness Standards

Elcometer 995

The Elcometer 995 Coated Thickness Standards are hard wearing, durable and are mounted in a protective folder. They provide the user with an ideal method to accurately measure the performance of the coating thickness gauge.

new

Features:

- ±2% accuracy, supplied with Calibration Certificate as standar

- Available with Ferrous (F), Non-Ferrous (N) or Ferrous & Non-Ferrous substrates

- Each standard is individually serial numbered for traceability

- Can be re-certified by Elcometer to meet ISO requirement

- Standards available in a range of thicknesses

- Special thicknesses can be supplied to meet specific need

- Coated with a hard wearing film for extended life spa

elcometer

Standard & Top Paint Inspection Gauges (P.I.G.)

Elcometer 121/4

Available in two models, the Elcometer 121 Paint Inspection Gauge is designed to measure the thickness of single or multiple layers of coatings.

Both models are supplied with illuminated integrated graticule microscopes.

The Top model has an internal carousel allowing each of the three cutters to be selected easily together with a cross hatch adhesion tester.

- Compact and convenient, ideal for use in confined area
- Made of anodised aluminium for durability
- Bright LED light source for clear vision
- Top Model can hold one cross hatch cutter & three standard cutters which are locked tight, a simple rotation of the cutter holder changes the cutting tool.

Using the Paint Inspection Gauge
1. Take the coated product.

2. Using the supplied marker, draw a line across the coating.

3. Using the P.I.G, make a cut at right angles to the marker line, all the way down to the substrate.
4. Use the supplied microscope to count the number of graticule divisions across the coating layer & calculate the thickness value using the graticule scale factor.

○ Optional Calibration Certificate available

Material Thickness
Ultrasonic thickness gauges are used to accurately determine the thickness of a variety of materials when only one side is accessible - ideal for monitoring corrosion and erosion.

Converting the time of flight of a pulse of sound energy, sent into and reflecting back from a defect or opposite surface, ultrasonic thickness gauges are ideal for measuring a material's thickness and detecting pits and flaws in a material without damage

A coated surface may disguise defects in the substrate beneath; the wall thickness of a pipeline, for example, may have been eroded by the flow of the material inside.

Likewise the walls of a storage tank may appear acceptable on the outside but be dangerously thin inside due to the corrosive chemicals stored within.

From a steel thickness gauge to a gauge which ignores the thickness of the coating, Elcometer has a range of ultrasonic material thickness gauges to meet your specific requirements.

Measurement Modes Explained:

PE
Pulsed Echo

Pulse Echo (PE): The standard method for measuring material thicknesses from 0.63mm to 500mm (0.025 to 20")

EE
Echo Echo
ThruPaint™

Echo Echo (ThruPaint™) Mode (EE): Measuring materials as thin as 2.54mm (0.100") the Echo-to-Echo mode ignores the thickness of any coating applied to the surface under inspection

EE
Echo Echo

Echo Echo (EE): Ideal for measuring thinner materials between 0.15-10.15mm (0.006-0.4") thick. Measures from the top surface to the material density boundary (typically the back wall).

VM
Velocity Mode

Velocity Mode (VM): Measures the speed of sound of materials and is ideal for determining the homogenity of a material/alloy and the correct velocity of a material for calibration.

IE
Interface Echo

Interface Echo (IE): More accurate than the PE mode, IE displays the total thickness from the top surface to the material density boundary - i.e. ignores the couplant thickness.

PLAS
Plastic

Plastic Mode (PLAS): Specificall used for measuring very thin plastics. A special graphite delay line accessory is required for this mode.

Material Thickness

Elcometer Material & Precision Thickness Gauges

The Elcometer 204, 304 & 307 ultrasonic material and precision thickness gauges are rugged, fast and incredibly easy to use.

Display readings, selected statistics, bar graph, run chart or differential mod

Large, easy to read scratch and solvent resistant colour screen displays readings in Metric or Imperial units

Dust & waterproof rugged design equivalent to IP54

Integrated zero disc ensures accurate results

Wide range of intelligent transducers.

Elcometer Material & Precision Thickness Gauges

Intelligent Dual & Single Element Transducers

Dual Element

Single Element

Elcometer has a wide range of single and dual element intelligent transducers available for use with the Elcometer 304 & 307. When connected to the gauge it instantly recognises which transducer has been attached.

When selecting a transducer it is important to choose one which will meet the specific application's needs. The type of material to be tested, the measurement range, the shape of the substrate (curved or flat) and the size of the material should be considered when selecting the appropriate transducer.

Single Element Transducers *i*

Dual Element Transducers *i*

Material Thickness

Elcometer 204 **Steel Ultrasonic Material Thickness Gauge**

Pre-calibrated for ease of use, the Elcometer 204 steel ultrasonic thickness gauge provides fast, accurate measurement of the thickness of steel.

Measures steel thickness from 0.63mm up to 500mm (0.025 - 20")

Pre-set reading rate of 4Hz (4 readings per second) provides faster readings

The Elcometer 204 is supplied with a 5MHz ¼" Potted Right Angle Dual Element Thickness Transducer

Pre-calibrated for measuring steel only

Supplied with everything required for use

Measures the material thickness when there is access to only one side

Integrated zero disc, ensures maximum accuracy

Transfer live readings via USB to ElcoMaster®

Intelligent transducer attached with auto recognition, ensures correct probe is identified when transducer is changed

Key Features Explained

- **Displays key statistics**

  In addition to the material thickness measurement, the Elcometer 204 displays key statistical values required to assess the overall material thickness; number of readings (n), the average material thickness ($\bar{x}$), the lowest (Lo) and highest (Hi) material thickness, the standard deviation (σ) and the coefficien of variation (CV%).

- **Zero Point calibration for accuracy**

  The Elcometer 204 has zero point calibration, ensuring accurate thickness measurements on steel surfaces.

- **Live data output to PC**

  As each measurement is taken, the Elcometer 204 transmits the thickness values via USB straight into an inspection application or into ElcoMaster®, for instant report generation.

Ideal for measuring steel pipes where there is only access to one side.

Ideal for measuring uncoated steel materials.

● Calibration Certificate supplied as standard.

Material Thickness

Elcometer 304 — Ultrasonic Material Thickness Gauge

new

The Elcometer 304 ultrasonic material thickness gauge is ideal for measuring the material thickness or material sound velocity of virtually any material such as metals, plastics, glass, epoxies & ceramics in a wide range of applications.

Stores up to 100,000 readings in up to 1,000 sequential batches for further analysis & downloading to a PC or mobile device

Up to 3 programmable calibration memories, allows the user to select a saved calbration method without the need to recalibrate the gauge

Selectable reading rate of 4, 8, 16Hz (4, 8, 16 readings per second)

Scan mode at 16Hz, ideal for measuring a large surface area

The Elcometer 304 is supplied as a gauge only, without transducer.

Transducers must be ordered separately.

(Wide range of transducers available)

Ultrasonic Material Thickness Gauge

Elcometer 304

Key Features Explained

- **Measures uncoated & coated surfaces**

  Flexible & easy to use, the Elcometer 304 doesn't just measure uncoated surfaces but can also measure coated surfaces. Using Echo Echo ThruPaint™ mode (EE), coatings up to 2mm (80mils) are ignored.

- **Choose & customise the reading display**

  The Elcometer 304 has a choice of display modes allowing the user to select the most appropriate for their needs; Readings, Selected Statistics, Bar Graph, Run Chart & Differential Mode.

- **User definable limits for pass/fail indicatio**

  Limits can be set on the Elcometer 304 for individual readings or for each batch with audible & visual pass/fail warnings.

- **Store each measurement for further analysis**

  Up to 100,000 readings can be saved into the gauge memory as each measurement is taken, which can be downloaded later into an inspection application or into ElcoMaster® for further analysis and reporting.

- **Data output to PC, Android™ or iOS† mobile device**

  Connect the Elcometer 304 via Bluetooth® or USB to a PC, Android™ or iOS† mobile device & download the data into an inspection application or into ElcoMaster® for instant report generation.
Ideal for measuring uncoated steel materials.

Ideal for measuring the material thickness of coated materials, ignoring the paint thickness (EE mode).

Dual Element Thickness Transducers

When selecting a transducer it is important to choose one which will meet the specifi application's needs. The type of material to be tested, the measurement range, the shape of the substrate (curved or flat) and the size of the material should be considered when selecting the appropriate transducer. All part numbers starting with 'TXC' are Potted Right Angle transducers and are supplied with a calibration certificate

Ultrasonic Precision Thickness Gauge

Elcometer 307

Key Features Explained

- **Measures thin materials with pinpoint accuracy**

  Flexible & easy to use, the Elcometer 307 has a measurement range of 0.15mm (0.006") to 25.40mm (1.000") with ±1% accuracy, across three measurement modes; Interface Echo (IE), Echo Echo (EE) & Plastic mode (PLAS).

- **Choose & customise the reading display**

  The Elcometer 307 has a choice of display modes allowing the user to select the most appropriate for their needs; Readings, Selected Statistics, Bar Graph, Run Chart & Differential Mode.

- **User definable limits for pass/fail indicatio**

  Limits can be set on the Elcometer 307 for individual readings or for each batch with audible & visual pass/fail warnings.

- **Store each measurement for further analysis**

  Up to 100,000 readings can be saved into the gauge memory as each measurement is taken, which can be downloaded later into an inspection application or into ElcoMaster® for further analysis and reporting.

- **Data output to PC, Android™ or iOS† mobile device**

  Connect the Elcometer 307 via Bluetooth® or USB to a PC, Android™ or iOS† mobile device & download the data into an inspection application or into ElcoMaster® for instant report generation.

Ideal for measuring the material thickness of thinner materials such as plastics.

Ideal for measuring the material thickness of thinner sheets of uncoated metal and other thin, metal substrates.

ELCOMETER 280
PULSED HOLIDAY DETECTOR

Making pulsed DC holiday detection safer, easier and more reliable

Rugged, shockproof and water resistant, the Elcometer range of DC, Pulsed DC, and Low Voltage Holiday Detectors are designed to meet the most exacting specifications. Ergonomic features and interchangeable probes make Elcometer's range the most versatile in the industry.

MORE INFO ▶ 👆

Pinhole Detection

The Elcometer 270 sets the standard for wet sponge detectors - high quality, low voltage detectors with a range of accessories to meet your requirements.

MORE INFO ▶ 👆

DC Holiday Detection

The Elcometer 266 High Voltage DC holiday detector's menu allows access to every major International Standard and automatically sets the required parameters.

MORE INFO ▶ 👆

Pulsed DC Holiday Detection

The Elcometer 280 Pulsed DC holiday detector with three grounding options makes pipeline inspection faster and safer than ever before.

Adhesion

From the largest man-made structures to the smallest household appliances, most manufactured products have a protective or cosmetic coating. Premature failure of this coating can, at the very least, result in additional costs of rework.

Adhesion testing after the coating process will quantify the strength of the bond between substrate and coating, or between diff rent coating layers or the cohesive strength of some substrates. Routine testing is used as part of inspection and maintenance procedures to help detect potential coating failures.

Adhesion Methods

Pull Off Adhesion: simple to use, quantitative range giving a definitiv adhesion value, ideal for the laboratory or field on flat or curved substrate applications. Tensile Dollies (or stubs) are glued to the coating and, when the adhesive has cured, the force required to pull the coating off the surface is measured

Push Off Adhesion: a dolly is adhered to the coating. When the adhesive has cured, the dolly is pushed off the surface by the adhesion tester. The push-off design makes this method ideal for flat and curved surfaces

Cross Hatch / Cross Cut: a fast, low cost, visual comparison method for paint and powder coatings up to a thickness of 250µm (10mils). The coating is cut into small squares, thereby reducing lateral bonding, and the adhesion assessed against ISO, ASTM or Corporate Standards.

When selecting an adhesion gauge, it is important to use the same inspection test methods throughout the inspection to ensure accurate comparisons.

Adhesion - Pull Off

Elcometer 510

Automatic Pull-Off Adhesion Gauge

The Elcometer 510 Automatic Pull-Off Adhesion Gauge accurately measures the strength of the bond between the coating and the substrate.

STANDARDS:

ASTM C1583, ASTM D4541, ASTM D7234-12, AS/NZS 1580.408.5, BS 1881-207, DIN 1048-2, EN 1015-12, EN 12636, EN 13144, EN 1542, EN 24624, ISO 16276-1, ISO 4624, JIS K 5600 5-7, NF T30-606, NF T30-062

Hand-held, waterproof rugged design equivalent to IP64

Automatic hydraulic pump ensures smooth and continuous pressure application for consistent, repeatable results

Fully adjustable pull rates 0.1-1.4MPa/s (15-203psi) to meet National and International Standards

User definable measurement range with an accuracy of ±1% of full scale:
10mm dolly: 100MPa / 14400psi
14.2mm dolly: 50MPa / 7200psi
20mm dolly: 25MPa / 3600psi
50mm dolly: 4MPa / 580psi

10, 14.2, 20 and 50mm diameter dolly options

User definable limits with unique pressure hold and release function

Suitable for use in Cloud Computing

Store up to 60,000 readings with individual pull graphs in up to 2,500 alpha numerical batches, complete with attribute failure information

Intuitive & easy to use menu structure in multiple languages

2 YEAR* WARRANTY

Elcometer 510 Model T: Made for iPhone 6 Plus, iPhone 6, iPhone 5s, iPhone 5c, iPhone 5, iPhone 4s, iPhone 4, iPad Air 2, iPad mini 3, iPad Air, iPad mini 2, iPad (3rd and 4th generation), iPad mini, iPad 2, and iPod touch (4th and 5th generation). "Made for iPod," "Made for iPhone," and "Made for iPad" mean that an electronic accessory has been designed to connect specifically to iPod touch, iPhone, or iPad, respectively, and has been certified by the developer to meet Apple performance standards. Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards. Please note that the use of this accessory with iPod touch, iPhone, or iPad may affect wireless performance

Automatic Pull-Off Adhesion Gauge

Elcometer 510

Powerful

- Suitable for use on metal, wood, concrete and other substrates

- Smooth load application up to 100MPa (14400 psi)

- USB and Bluetooth® data output to iOS† or Android™ devices

- Stores up to 60,000 readings in 2,500 batches

Durable

- Sealed, heavy duty and impact resistant

- Dust and waterproof equivalent to IP64

- Suitable for use in harsh environments

Efficient

- Ideal for laboratory and field use

- 14.2, 20 and 50mm (0.56, 0.76 & 1.96") diameter reusable dollies

- Compatible with ElcoMaster® and ElcoMaster® Mobile App

- Measures on small, curved and flat surface

Accurate

- Measurement range up to 100MPa (14400 psi) with an accuracy of ±1% of full scale

- Can be used in accordance with National & International Standards

50mm

20mm

14.2mm

10mm

† Compatible with iPod, iPhone and iPad.

Adhesion - Pull Off

Elcometer 510   Automatic Pull-Off Adhesion Gauge

Key Features Explained

Automatic adhesion tester with selectable pull rates for 10, 14.2, 20 & 50mm diameter dollies.

View trend graphs or live statistics alongside the reading value.

Individual user definable pull rate graphs can be saved with each reading.

Stores individual readings and pull rate graphs in up to 2,500 alpha numeric batches, together with date, time and attribute information.

Either pull to maximum or pull to preset limit. Unique time hold feature allows users to set a delay before pressure returns to zero.
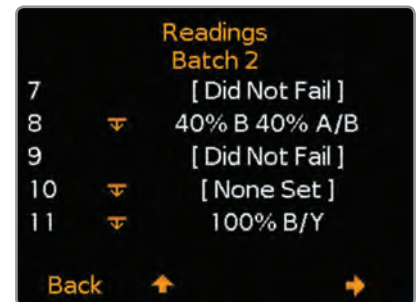

Save cohesive and adhesive failure attributes alongside your adhesion pull data in accordance with National and International Standards.

Testing coatings on low bond strength substrates

When testing coatings on low bond strength substrates such as concrete, wood or other fibrous materials, a larger surface area of dolly (50mm) is required to provide accurate, repeatable and reproducible results.

The Elcometer 510 is available as a Concrete Adhesion Tester Kit, or 50mm accessory items (skirt, dolly, cutter) can be added to existing Elcometer 510 adhesion kits.

Automatic Pull-Off Adhesion Gauge

Elcometer 510

Powered by either standard rechargeable batteries or AC mains*. Each battery charge performs up to 200 pulls. Battery recharge time <300 minutes.

Transfer data to your PC via USB or Bluetooth® for further analysis with ElcoMaster® software or view live pull rate graphs in ElcoMaster® during the test.

Using wireless Bluetooth® communication link the gauge to an Android™ or iPhone‡ mobile device. Live GPS coordinates from your mobile device can be added to reports and emailed instantly.

A range of interchangeable thin & standard substrate skirt adaptors allow each gauge to be used with 10, 14.2, 20 or 50mm diameter reusable dollies, ideal for testing coatings on thin, thick, flat or convex substrates.

The optional magnetic anchor clamp ensures the actuator doesn't fall during tests on vertical surfaces or testing at height.

Supplied in a robust plastic carry case for easy transportation to and around the job site.

Adhesion Verification Unit for Verification in the Field

The Elcometer 510 gauge's inbuilt Adhesion Verification feature allows users to connect the gauge to the Elcometer AVU to verify gauge accuracy in the field

Assessing The Results - Failure Attributes

Many National and International Standards, including ISO 4624 & ASTM D4541, require the user to record not only the pull-off force but also the nature of the failure. This is done by examining the bottom of the dolly and assessing the failure. In 'Advanced' mode on the Elcometer 510 it is possible to select the 'Attributes' feature (Menu/Setup/Gauge Mode/Advanced) allowing the nature of the fracture to be recorded against each reading and stored within the batch.

Examining The Dolly

a) Cohesive Failure: The coating fails within the body of a coating layer leaving the same coating on the surface and on the dolly face.

b) Adhesive Failure: Failure occurs at the interface between layers (intercoat) where one pulls away from the other. The "coating" on the dolly face will not be the same as that on the test area.

c) Glue Failure: When no coating is present on the dolly it must be recorded as a failure of the glue. This may be due to incorrect or insuffici t mixing of the component parts of the adhesive, incompatibility between the adhesive/coating/dolly/test surface.

Dolly Face   Substrate

a) 50% Cohesive failure

b) 100% Adhesive failure between two layers

c) Glue failure

Cohesive Code   Adhesive Code
Cohesive Failure Layer[d]		Adhesive Failure Layers	
Code	Description	Code	Description
A	Substrate	A/B	Substrate & Layer 1
B	Layer 1	B/C	Layer 1 & Layer 2
C	Layer 2	C/D	Layer 2 & Layer 3
D	Layer 3	D/E	Layer 3 & Layer 4
E	Layer 4	E/F	Layer 4 & Layer 5
F	Layer 5	F/Y	Layer 5 & Glue
Y	Glue	Y/Z	Glue & Dolly

The data is saved in the batch and can be viewed at any time displayed as

##.## MPa[e]   **N% A M% A/B**, where;

##.## MPa[e]	= Pull Force in MPa or other measurement units (psi, Newtons or Nmm^{-2})
N%	= Cohesive failure percentage[f]
A	= Cohesive failure layer
M%	= Adhesion failure percentage[f]
A/B	= Intercoat adhesive failure layers

---
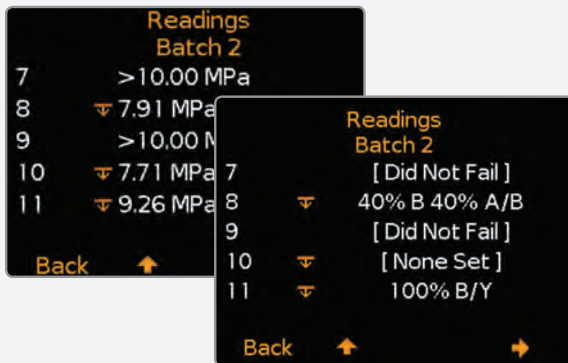

[d] The number of layers can be user defined for each batch via Batch/New Batch/N mber of Layers. This will affect the number of layers available for selection durin attribute recording. The maximum number of layers available is five, excluding the substrate and glue

[e] Or equivalent units. [f] To the nearest 10%, in line with International Standards.

Automatic Pull-Off Adhesion Gauge

Elcometer 510

Create instant reports with ElcoMaster®

What you do with the collected data is just as important as taking the readings themselves.

ElcoMaster® is a fast, easy to use software solution for all your data management and quality assurance needs, preparing professional inspection reports at the click of a button.

Whether you are out in the field or on the factory floor, using the ElcoMaster® Mobile App users can;

- Store live readings directly on to a mobile device and save them into batches.
- View the pull rate graph in real-time for the duration of the test.
- Add attribute data to each individual batch reading.
- Add photographs of the dolly and test surface to each individual batch reading at the click of a button.
- Plot individual readings on to a location map, photograph or diagram.
- Inspection data can be transferred from mobile to PC for further analysis and reporting.
- Generate instant .pdf[1] report for submission.

Combine different inspection parameters (such as dry film thickness, surface profile, salt contamination, climate or adhesion) together with images, notes and other project specific information into customised reports.

Data transferred from the gauge to ElcoMaster® includes;

- Adhesion Measurements
- Date & Time
- Cohesive/Adhesive Failure Attributes
- Dolly size
- Pull rate graph
- Pull to Limit/Max
- Limit values
- Limit Hold Time
- Cutting Device
- Number of Layers
- Skirt Type/Support Ring Dimensions
- Batch Information & Statistics
- Calibration Information
- Calibration Verification Date/Time

[†] 50mm (2") dollies are supplied in packs of 4.

Adhesion - Pull Off

Elcometer 510 — Automatic Pull-Off Adhesion Gauge

Pull-Off Adhesion Tests - Preventing Adhesive and Cohesive Failures

Preparing the surface and dolly

1. Select an appropriate test area which is flat and has sufficient area to attach the adhesion gauge.
2. Abrade the dolly and surface, clean both to remove any dust - minimising the risk of an 'adhesive' failure.

Fixing the dolly

3. Mix the adhesive correctly and apply a uniform adhesive film over the entire dolly face.
4. Test Standards require that the dolly is pulled off perpendicularly to the test surface. The dolly must therefore be adhered on to a prepared flat test surface (see images below). Apply an even pressure to the dolly to ensure that the dolly face is parallel to the test surface.
5. Remove any excess adhesive from around the dolly and allow to fully cure. Tape maybe required when applying dollies to vertical surfaces during the cure process.
6. If required, once the dolly has fully cured, score the coating around the dolly using the dolly cutter provided.
7. Attach the gauge actuator to the dolly and begin test.

Correct dolly position ✓   Incorrect dolly position ✗

Dolly and Actuator

Coating

Substrate

Direction of pull   Direction of pull   Moment of fracture
Assessment of the Adhesion Test

For a valid pull test the coating must cover at least 50% of the area of the dolly face. If the glue fails and no coating is present on the dolly, or it covers less than 50% of the dolly face area, the pull-test is invalid and should be repeated.

When the coating has failed within the layer leaving the same coating on both the dolly and the test panel it is known as a *'cohesive failure'*.

'Adhesive failures' occur when either the coating has failed at the interface with another coating (leaving a coating on the dolly and another coating on the substrate), or when the coating has failed at the substrate (leaving the coating on the dolly and the substrate bare).

NOTE: If the glue fails at a value above the specification then it can be reported that the adhesion exceeded the specification for this individual test.

Adhesion Verification Unit (VU)

Elcometer AVU

The Elcometer AVU has been designed to provide users with the means to confirm the accuracy of their pull-off adhesion gauge.

Due to its robust design the Elcometer AVU is suitable for use on site or in the laboratory and allows users to verify or self-certify their pull-off adhesion gauges

A range of dolly adaptors are available for testing the Elcometer 106, Elcometer 506 and Elcometer 510 adhesion gauges. Adaptors are also available for testing other manufacturers' gauges.

Attach the appropriate dolly adaptor to the AVU, connect your adhesion gauge, apply load and compare the adhesion tester value to the reading on the AVU Display.

Features include:
- Max hold and live reading display
- MPa / psi switchable units
- Backlit display
- Automatic switch off

The Elcometer AVU is supplied with either a test certificate or full calibration certificate, suitable for self-certificatio

The Elcometer 506 Pull-Off Adhesion Testers allow the user to accurately measure the strength of the bond between the coating and the substrate.

Hand-held, ergonomic and fully portable - ideal for on-site adhesion testing

Measurement range up to 50MPa (7250psi) with an accuracy of ±1% of full scale

Rotating crank handle applies an even uniform load up to 50MPa (7250psi)

Quick connect coupling for 14.2, 20 and 50mm diameter dollies

2 YEAR* WARRANTY

elcometer

Pull-Off Adhesion Tester   **Elcometer 506**

Powerful

- Suitable for use on metal, wood, concrete and other substrates

- Rugged & lightweight - ideal for frequent testing

- Smooth load application up to 50MPa (7250psi)

Flexible

- Easy to use hand-held design

- Ideal for laboratory and field use

- 14.2, 20 and 50mm (0.56, 0.76 & 1.96") diameter reusable dollies

- Measures on small, curved and flat surface

Accurate

- Measurement range up to 50MPa
  (7250psi) with an accuracy of ±1% of full scale

Durable

- Sealed, heavy duty and impact resistant

- Dust and waterproof equivalent to IP65

- Suitable for use in harsh environments

Digital and analogue gauges available for both harsh and hazardous environments

Low height actuator allows access in restricted areas. Safety harness clip prevents accidental damage of surrounding areas during test on vertical surfaces

Actuator skirts for a range of substrate thicknesses and bond strengths, on flat or curved surfaces

Pull Off Adhesion Tester

Elcometer 106

This easy to operate and fully portable Type II adhesion gauge provides a numerical value for adhesion. Applications include paint or plasma spray on bridge decking, coatings on steel, aluminium, concrete etc.

- Supplied in a carry case - ideal for site tests
- Hand operated - no power supply necessary
- Includes a cutter for EN13144 and ISO 4624 tests

Test Method

A test dolly is bonded to the coating using an adhesive. The Elcometer 106 houses a spring arrangement which applies a lift force to the dolly as the tension is increased.

When the coating is pulled off the surface, an indicator on the scale shows the numerical value of adhesion expressed in terms of the force per unit area required to remove the dolly.

Inspection of the dolly face is required to determine the failure mode.

STANDARDS:

Adhesion - Pull Off

Elcometer 106/6

Adhesion Tester for Coatings on Concrete

The Elcometer 106/6 Adhesion Tester has been specifically designed to measure coatings on concrete.

Operating in a similar way to the regular Elcometer 106 Adhesion Tester, the Elcometer 106/6 uses a 50mm (2") diameter dolly for testing coatings on concrete.

The Elcometer 106/6 is fully portable and supplied in a carry case - making it ideal for on site tests.

Hydraulic Adhesion Tester

Elcometer 108

The Elcometer 108 Hydraulic Adhesion Tester is an extremely versatile Type III adhesion gauge which can be used for many adhesion requirements. Tests can be made on flat or curved (concave and convex) surfaces

The Elcometer 108 is the ideal gauge for coatings on Tanks, Pipelines, etc.

- Hand-Powered and portable
- Ideal for site work
- Reusable stainless steel dollies

Elcometer Digital Adhesion Gauge features:

- Maximum hold - displays the highest value reached
- Backlit display for dark areas
- Rubber protective casing
- Switchable Metric/Imperial

The Elcometer 108 can be used with convex and concave dollies, making this the gauge for adhesion of coatings on all pipelines including those with small diameter, tanks and other curved surfaces. There is a wide range of curved dollies available, each designed for a specific range of curvature

Cross Hatch Cutter

The Elcometer 107 Cross Hatch Cutter provides an instant assessment of the quality of the bond to the substrate. Due to its rugged construction this gauge is ideal for thin, thick or tough coatings on all surfaces. An ideal field or laboratory test.

- Robust design
- Large, non slip grip
- Ideal for thin, thick or hard coatings
- A quick change, four sided cutter allows adhesion testing on a wide range of coating thicknesses (1mm, 1.5mm, 2mm and 3mm)

The Elcometer 107 Cross Hatch Cutter is available as a Basic or Full Kit.

Cross Hatch Adhesion Tester

Elcometer 1542

The Elcometer 1542 is ideal for measuring the cross hatch adhesion of coatings up to 250µm (9.8mils) on flat surfaces and test panels.

Measure on large or small panels by quickly changing the position of the guide wheel using the hexagonal wrench provided.

Each cutter wheel consists of 8 cutting faces. When one face becomes worn, rotate the cutting wheel to the next face.

The Elcometer 1542 is available with three different cutter spacings 1, 2 & 3mm for a range of coating thickness (see table below).

The Elcometer 1542 is available on its own (Basic Kit) or as a Full Kit which includes a brush, magnifier & ISO or ASTM adhesive tape. There are also Advanced Kits which include all three (1, 2 & 3mm) cross hatch adhesion testers, together with either ISO or ASTM adhesive tape.

Adhesion - Cross Hatch

Elcometer 1540

Cross Cut Tester

The Elcometer 1540 is a simple instrument for quickly determining the adhesion of a large variety of paints up to 50μm (2 mils) thickness.

Made from steel, it has 11 tapered teeth with 1mm spacing. Two sets of lines are cut at right angles to obtain a pattern of 100 squares.

Results are determined by the table below.

Pinhole & Porosity

Premature corrosion of a substrate is usually due to a coating failure. A major cause is the presence of flaws in the finished coating.

Collectively referred to as porosity, the main types of flaws are

Runs & Sags: Coatings move under gravity leaving a thin dry film

Cissing: When a coating does not re-flow to cover the voids generated by air bubbles being released from the surface of a coating.

Cratering: If the substrate is wet or the coating has poor flow characteristics, voids are created in the coating

Pinholes: Caused by air entrapment which is then released from the surface, or by the entrapment of particulates (dust, sand etc.) which do not stay in place.

Over Coating: If too much coating is applied, as it cures internal stresses of the coating can cause it to crack.

Under Coating: Uncoated areas, or where the coating flows away from edges or corners of a substrate or welds. Insufficient coating over a rough surface profile may also leave the peaks of the profile exposed

There are essentially, three flaw detection methods in our range:

Wet Sponge Technique: A low voltage is applied to a moist sponge. When the sponge moves over a coating flaw, liquid penetrates to the substrate and completes an electrical circuit, setting off the alarm. The wet sponge technique is suitable for measuring insulating coatings less than 500µm (20mils) on conductive substrates, and is ideal for powder coatings and other coatings where the user does not wish to damage the coating.

High Voltage Technique: The high voltage, or porosity technique, can be used to test coatings up to 25mm (1") thick and is ideal for inspecting pipelines and other protective coatings. Coatings on concrete can also be tested using this method.

A power supply generates a high voltage DC or pulsed DC to a probe. As the probe passes over a flaw, a spark at the contact point sets off the alarm. This technique is suitable for locating the types of flaws described above, although care is required on thin coatings.

UV Pinhole Detection: UV light can be used as a low cost, quick method of detecting pinholes in coatings. A base coat containing a UV fluorescing additive is applied. When the UV flashlight shines on the coating, areas where the base coat is not covered fluoresce, identifying the location of the pinhole.

Pinhole & Porosity

Elcometer 270

Pinhole Detector

The Elcometer 270 range utilises the wet sponge technique and sets the standard for wet sponge detectors - high quality, low voltage detectors with a wide range of accessories to meet your requirements.

User selectable voltages:
9V, 67.5V or 90V

Automatic internal voltage check ensures that the selected voltage can be achieved

Easy release, snag proof cables - available in 4m (13'2")
& 10m (32'10") lengths

Visual and audible alarms indicate a pinhole

A wide range of wand accessories available

Each unit can be converted into a separate wand with a base unit using the separate wand adaptor

elcometer

Pinhole Detector

Elcometer 270

Accessories

Standard wand
A universal flat sponge to sui almost all applications

T27016867

Spare flat sponge se Pack of 3 sponges;
150 x 60 x 25mm (6 x 2.3 x 1")

T27018050

Roller sponge wand
Ideal for large flat surface inspection

T27016960

Spare roller sponge
T27018051

Telescopic wand adaptor
with belt clip - extends to 1m(39"), ideal for floors or high area

T27016998

Separate wand adaptor
with belt clip - converts the gauge into a separate pinhole detector

T27016999

Extension piece
420mm (16.5") extensions to expand operators reach. Additional extension pieces can be connected to each other

T27016965

Pinhole Inspector's Kit
The complete pinhole detection kit. Each kit is supplied with:
1 x separate wand handle & lead
1 x roller wand
1 x 10m (32') signal return cable
2 x extension pieces
1 x telescopic extension
1 x belt clip
1 x bottle of wetting agent
3 x AA batteries
1 x spare flat spong
1 x spare roller sponge
The kit does not include the main instrument; just add the model number to the order

T27018191

Return cable - 4m (13')
supplied as standard, complete with crocodile clip and connection plug

T99916954

Return cable - 10m (32')
supplied on a drum, complete with clip and connection plug

T99916996

Wetting agent
50ml (1.7floz) bottle - helps aid the fast detection of pinholes. Just add to the water used to dampen the sponge

T27018024

Packing List	Pinhole Detector, standard wand and flat sponge, 4m (13 2") return lead with crocodile clip, 3 x AA (LR1600) batteries and operating instructions		

● Calibration Certificate supplied as standar .

Pinhole & Porosity

Elcometer 280

Pulsed DC Holiday Detector

The Elcometer 280 is a 'stick type' holiday detector which has been designed to make pulsed DC high voltage holiday detection safer, easier and more reliable than ever before.

Flashing display, bright LED and a user adjustable volume alarm indicates detection of a holiday

0.5 - 35kV range (user selectable) for detecting porosity in coatings up to 25mm (1") thick

Safety trigger integrated inside the handle cuts power if released

Rugged, shock proof and water resistant design to ensure long life, even in harsh environments

A wide range of interchangeable probe accessories available - compatible with all Elcometer holiday detectors

Ideal for testing clean, damp, dirty or slightly conductive coatings

Voltage calculator automatically sets the correct voltage from your coating thickness value

Internal jeep tester ensures that the selected voltage equals the test voltage

elcometer

Pulsed DC Holiday Detector

Using state of the art electronics, the Elcometer 280 allows users to inspect coatings - without connecting the earth return lead to the component substrate, ideal for inspecting large surfaces and pipelines.

Powerful

The Elcometer 280 uses the high voltage pulsed DC technique to detect holidays in coatings - even if the coating is damp, dirty or slightly conductive.

Safe

From the two stage safety switch, bright LED's and screen icons which signify when the high voltage is on, to the extended ribbing to protect the user from spark creep, the Elcometer 280 sets the standard for high voltage measurement safety.

User Friendly

Balanced, ergonomic design, complete with shoulder strap allows long periods of continuous use.

Versatile

Using the wide range of probe accessories, users can detect porosity/holidays in coatings up to 25mm (1") thick.

Tough

Rugged, shockproof and water resistant, each unit is designed for use even in the harshest of environments.

Right angled wire brush probe

Internal circular wire pipe brush probe

Band brush probes

External 'C-type' wire brush

Right angled rubber probe

Rolling Springs

Pinhole & Porosity
Elcometer 280

Key Features

Red LED indicates high voltage ON

Earth signal return lead disconnected icon

Porosity Detector overload icon
indicates that the unit cannot obtain selected voltage with current accessory / coating combination

Calculation softkey
select the relevant standard and coating thickness value

Voltage adjustment softkey

Waterproof buzzer

Blue LED flashes as holidays are de ected

Holiday detected icon

Battery symbol indicating remaining charge

Voltage selected

Porosity standard in use
used in conjunction with setting the coating thickness within the Voltage Calculator

Menu softkey

Voltage level achieved at probe

Specialised extended ribbing
designed to standard EN61010, ribs provide additional protection to the user during use

Integrated safety trigger switch
switches off the high voltage if released

Quick release battery pack
fully charged in 4 hours, provides up to 30+ hours of continuous use*

Earth return lead socket
including ¼ turn lock/release to ensure connection during testing

Rubberised second hand grip
provides greater control and balance during testing

Large, waterproof buttons
ideal for use - even in gloves

Shoulder harness point
strap can be quickly clipped on as required

Clear, backlit LCD display
shows all relevant information, even in dark environments

High Voltage ON/OFF
separate button minimises risk of accidental switch on

* the battery life is dependant on selected voltage and load applied - see Technical Specification for more informatio

Holiday Detector

The Elcometer 266 revolutionises High Voltage DC testing of coatings porosity detection making it safer, easier and more reliable than ever before.

Voltage calculator automatically sets the correct voltage from your coating thickness value

Adjustable Voltage:
0.5kV - 1kV in 50V steps
1kV - 30kV in 100V steps

A wide range of probe brushes and rolling springs available

To change maximum voltage range, select a different handle; 5k , 15kV or 30kV DC or 30kV DC continuous

Visual and audible alarms, Bright LEDs on the handle, as well as a loud buzzer, clearly indicate when a holiday is detected

Internal Voltmeter/Jeep tester ensures that the test voltage equals the selected voltage

Dual safety switch on handle to avoid accidental switch on (grey/orange probe handles only)

2 YEAR* WARRANTY

For a full range of rolling springs, rubber or wire brush probes and other accessories

Key Features

Interchangeable DC probe handles**

Part Number	Description
T26620033-1	DC5 (0.5 - 5kV)
T26620033-2	DC15 (0.5 - 15kV)
T26620033-3	DC30 (0.5 - 30kV)
T26620033-4	DC30S (0.5 - 30kV)

Testing has never been safer
Ribbing provides additional user protection - specifically designed to meet EN 61010

Removeable, quick charge batteries
Fully charge the battery pack in 4 hours, within the gauge or separately, for up to 40 hours of continuous testing

Part Number	Description
T99923482	Rechargeable lithium ion battery pack

Integrated voltage calculator
Enter the test standard & the coating thickness then the gauge will automatically programme the correct voltage

ASTM G62-87
1030 µm
24.3kV
STANDARD

Second hand grip is available
Ideal for testing pipes and tank floors with 2 hands - without compromising safety

Part Number	Description
T26620081	Second Hand Grip

Universal probe adaptors
Enables the Elcometer 266 to work with all major holiday detector's accessories.

For the complete range of adaptors

Pinhole & Porosity
Elcometer 236

Holiday Detector

The Elcometer 236 Holiday Detector provides high voltage porosity testing to detect pits, flaws, holes, etc. in a wide variety of non-metallic coatings.

Standard and telescopic handles available for hard to reach areas

Available in 2 versions; 15 and 30kV; fully adjustable in 100 Volt steps

Adjustable sensitivity allows use on partially conductive surfaces

Integrated neon bulb in the handle, together with buzzer indicate when a holiday has been located

A wide range of probe brushes and springs available

elcometer

Holiday Detector

Elcometer 236

The Elcometer 236 provides the user with complete control of voltage and sensitivity settings and is available in 2 versions, 15kV and 30kV.

Each unit is supplied in a convenient carry case which also holds the probe handle and an additional (optional) external re-chargeable battery pack which doubles the testing time available.

Due to its unique design, the probe handle can be replaced with a telescopic probe handle - extending the measurement reach up to almost 4m (13'), ideal for testing on large/high structures.

Rolling Springs *Available in phosphor bronze or stainless steel*

Each spring is supplied with an easy-release coupling piece, allowing users to quickly connect and disconnect the rolling spring from stanchions, pillars, etc.

Please note that rolling springs are not supplied with a spring holder. Please order the appropriate rolling spring holder separately.

Rolling springs are available in 2 versions, phosphor bronze round spring and 304 stainless steel box section spring. The 19mm (0.75") diameter phosphor bronze springs are almost 3 times lighter than the 34mm (1.33") diameter stainless steel springs.

UV Pinhole Flashlight

Elcometer 260

The Elcometer 260 UV Pinhole Flashlight is battery powered and housed in a rugged aluminium case providing a quick, low cost method of testing coatings for pinholes.

Featuring a single Watt purple light emitting diode, the Elcometer 260 UV flashlight has a beam wavelength of 405nm (±5nm), which the human eye perceives as a purple light.

A UV reflective additive is applied to the base coat. The UV flashlight shines the purple light on the coating, the base coat fluoresces where it is not covered by an subsequent coating - identifying any pinholes in the top coat.

STANDARDS:
ASTM E2501

Technical Specification

Part Number	D260----2
Beam Wavelength	405nm ±5nm
Flashlight Casing	Hard anodised aluminium
Battery Life	6 hours (continuous use)
Battery Type	2 x CR123A batteries
Lens Type	Dual element diffuse
Weight	173g (6.1oz)
Dimensions	150 x 35mm (6 x 1.4")
Packing List	Elcometer 260 UV Pinhole Flashlight, UV protective glasses, nylon belt holster, 2 x CR123A batteries, operating instructions

Accessories

T26020140	UV Protective Glasses
T26020141	2 x Replacement 123A batteries

ElcoMaster®

DATA MANAGEMENT SOFTWARE

Combines all your inspection records in one report, instantly!

From surface profile to climate monitoring, dry film thickness to data management; Elcometer combines high quality products with simple data management, producing professional inspection reports at the click of a button.

MORE INFO ▶

Suitable for use in Cloud Computing

Surface Profile	**Climate Monitoring**	**Coating Thickness**	**Adhesion**
The Elcometer 224 digital surface profile gauge, available as either integral or separate probe versions, is faster than ever before.	The Elcometer 319 dewpoint meter records all the critical climate parameters for the coating's professional: surface, air and dewpoint temperatures, %RH & ΔT.	Up to 40% faster than other coating thickness gauges, the new Elcometer 456 provides you with accurate and repeatable readings. Integral and separate probes available.	Fast, accurate and portable automatic adhesion testing on thin, thick, flat or convex substrates. The Elcometer 510 quickly and easily records, stores and transfers all your adhesion data.

Inspector's Accessories

Elcometer offers a full range of accessories **specifically for the coatings inspector, these** include:

Inspection Mirrors: It may be necessary to take a detailed look at a specific area where you cannot get to. In this case an inspection mirror is required.

Magnifiers & Microscopes: For close up investigations, the inspector may require magnification of the surface for a clearer understanding.

Torches/Flashlight: In dark or shaded areas such as in ballast tanks or on large production sites, further investigation may require additional light.

Publications: Inspection manuals for general coating defects or those specific to pipeline inspection

Pictorial Surface Standards for blast cleaning incorporating standards for BS, ISO, SIS, and SSPC.

The Macaw's Pipeline Defects is a text book specific to pipelines and contains information on pipeline coatings.

Inspection Accessories

Elcometer 131

Inspection Mirrors

Ideal for inspecting difficul to access areas - inside pipes, behind corners, underneath inspection tanks, and other inaccessible or awkward areas.

Combined with the full range of test equipment from Elcometer, these high quality, robust mirrors help to provide a detailed examination of the component or project under inspection.

Technical Specification

Part Number	Description
H131---1A	Elcometer 131/1A Telescopic Inspection Mirror
Dimensions	Extends from 520mm (20.5") to 1500mm (59") Mirror diameter: 63mm (2.5")
Weight	650g (1.43lb)
Packing List	Elcometer 131 Inspection Mirror

Part Number	Description

H131---2A	Elcometer 131/2A Illuminated Inspection Mirror (Battery Type 2 x LR14 C)
Dimensions	Mirror diameter: 63mm (2.5")
Weight	650g (1.43lb)
Packing List	Elcometer 131 Inspection Mirror

Illuminated (x10) Magnifie

Elcometer 137

From time to time a closer inspection of a surface is required to ascertain the exact conditions of the material's profile, cleanliness etc

The Elcometer 137 illuminated magnifier is the ideal product for the job as many environments can be in low light or dark areas - ballast tanks, oil and gas tanks, etc.

- Lightweight, battery powered, portable magnifie
- Ideal for viewing surface comparators
- x10 magnification for close surface inspectio
- Scaled lens for easy measurement of surface features

Technical Specification

Part Number	Description
H137----1	Elcometer 137 Illuminated Magnifie
Battery Type	3 x LR14 (C)
Dimensions	33 x 215mm (1.3 x 8.5")
Weight	236g (0.52lb)
Packing List	Elcometer 137 Illuminated Magnifier and operating instruction

Pocket (x30) Microscope

Elcometer 7210

The Elcometer 7210 is pocket size making it an extremely practical microscope for site inspections.

Having x30 magnification and an inbuilt light source, the Elcometer 7210 Pocket Microscope is the ideal choice for close up investigation of defects and surface cleanliness.

Technical Specification

Part Number	Description
KT007210M001	Elcometer 7210 Pocket Microscope
Battery Type	1 x AAA battery
Dimensions	140 x 50 x 22mm (5.5 x 2 x 0.9")
Weight	68g (0.14lb)
Packing List	Elcometer 7210 Pocket Microscope and operating instructions

Inspection Accessories

Elcometer 900

Illuminated (x50) Microscope

The Elcometer 900 is a very simple, graduated x50 microscope with internal illumination.

This allows the user to quickly determine the width by counting the number of graduated reticules on the scaled lens and then calculating the value.

Technical Specification

Part Number	Description		
W90018568-D	Elcometer 900 Microscope		
Battery Type	1 x AAA battery		
Dimensions	120 x 43 x 115mm (4.7 x 1.7 x 4.5")	Weight	145g (0.31lb)
Packing List	Elcometer 900 Illuminated Microscope and operating instructions		

Elcometer 132

Safety Torch / Flash Light

Many environments can have low light, dark areas or explosive gas present; ballast tanks, oil and gas tanks, etc. It is imperative for safety reasons to be able to inspect the coating adequately and to have sufficient ligh

The Elcometer 132 Safety Torch/Flash Light is explosion proof and meets the ATEX directive as category 2 equipment.

It is approved to the latest EN Standards for electrical apparatus for potential explosive atmospheres. This allows for use in Group II applications zones 1 and 2, IIA and IIB gases, where T4 temperature class permits.

Technical Specification

Part Number	Description
H132---1A	Elcometer 132 Safety Torch/Flash Light
Battery Type	2 x LR20 (D)
Dimensions	200 x 60mm (7.8 x 2.4")
Weight	150g (5.3oz) without batteries
Packing List	Elcometer 132 Safety Torch/Flash Light and operating instructions

Paint Safe Marker Pens

Paint Safe Marker Pens are used to highlight visual areas of non conformance, providing a clear indication of areas where rework or other processes need to be carried out.

The Safinah Marker pen has been specially selected for use as an inspection marker for all types of large steel fabrications which include both coated or uncoated ships and offshore structures

The pen which is available in black, is ideal for marking in the most sensitive areas.

Technical Specification

Part Number	Description
H144----1	Elcometer 144 Paint Safe Marker Pens (pack of 5)

Weld Gauge

Elcometer 147

The Elcometer 147 Weld Gauge measures many aspects of welds in both Metric and Imperial:

- angle of preparation 0 to 60°
- misalignment (high - low)
- fillet weld throat siz
- fillet weld lengt
- 2mm (0.79") edge roundness test
- excess weld metal (capping size)
- depth of undercut
- depth of pitting
- general linear measurements up to 60mm (2")

Technical Specification

Part Number	Description
H147----1	Elcometer 147 Weld Gauge
Angle of Preparation Scale	0 - 60° in 5° divisions
Misalignment Scale	0 - 25mm in 1mm divisions and 0 - 1" in 1/16" divisions
Fillet Leg & Excess Weld Scale	0 - 25mm in 1mm divisions and 0 - 1" in 1/16" divisions
Fillet Throat Scale	0 - 20mm in 1mm divisions and 0 - ¾" in 1/16" divisions
Undercut Scale	0 - 4mm in 1mm divisions and 0 - ¼" in 1/16" divisions
Dimensions	100 x 68mm (3.9 x 2.7")
Weight	154g (5.4oz)
Packing List	Elcometer 147 Weld Gauge and instruction card

For Pictorial Surface Standards　MORE INFO ▶

Inspection Accessories

Fitz

Elcometer Fitz's Atlas 2 of Coatings Defects

The Elcometer Fitz's Atlas 2 of Coating Defects (EFA) takes the reader through a comprehensive range of problems and discusses each in detail.

EFA provides the User with a greater understanding of the defect, the probable cause and possible solutions. With in excess of 180 colour photographs, the user can quickly gain an insight into the coatings industry and the possible pitfalls.

Sections:
- Welding Faults: welds, cracks, surface porosity, undercut
- Surface Conditions: surface preparation, oil contamination, skip weld
- Coatings Defects: a comprehensive list of possible defects including blistering, bloom, chalking, cracking, erosion, fish eyes, orange pee
- Microcopy: blisters, bubbles, delamination, pinholes, voids, weed fouling
- Marine Fouling: animal fouling, barnacles, molluscs, weed or algae fouling

Technical Specification

Part Number	Description
H99916043	Elcometer Fitz's Atlas 2 of Coating Defects
Dimensions	223 x 220 x 70mm (9 x 8.6 x 3")
Weight	0.45kg (1lb)

Macaw

Elcometer Macaw's Pipeline Defects
The aim of this publication is to illustrate the range of defects that may be encountered in high pressure steel pipelines and pipeline coatings.

The manual gives advice on the probable cause and significance of the defects and comments on appropriate remedial actions.

The defects included in this book encompass all aspects of high pressure steel pipeline manufacture, construction and operation, together with sections on coating and cathodic protection defects and examples of how defects interact to generate new or modified risks to pipeline integrit .

Technical Specification

Part Number	Description
H99918572	Elcometer Macaw's Pipeline Defects
Dimensions	210 x 148 x 15mm (8 x 6 x 0.5")
Weight	0.4kg (1.1lb)

Inspection Kits

Elcometer offers one of the widest ranges of inspection equipment available. Our products are used across numerous industry sectors. In all cases, there is always a need to **undertake a number of specific inspections** during quality control assessments - as one parameter can affect another.

One inspection parameter can affect another, for example the thickness of an applied coating can affect properties such as adhesion, gloss, colour and porosity.

Elcometer has put together a number of inspection kits which are both product and industry specific - combining those gauges from our range into one robust carry case, ideal for transporting to and from the inspection site.

Elcometer inspection kits are available for:

- Digital Inspection
- Blasting Inspection
- Protective Coating Inspection
- Hazardous Area Inspection
- Automotive Inspection
- Qualicoat & Powder Inspection
- Surface Contamination
- Soluble Salt & Ion Specific Inspectio
- Pinhole & Holiday Detection
- Heating, Ventilation & AC Duct Inspection

Custom kits can also be developed for your particular requirements, please contact your distributor for further information.

Inspection Kits

Elcometer
Digital Inspection Kits

These digital inspection kits have been specifically designed to undertake the three principal inspection requirements in the Protective and Industrial Coatings Industry – climate, surface profile and dry film thickness. Ideal for 'paperless' quality assurance systems the kits come complete with ElcoMaster® Data Management Software for professional reporting and analysis.

Two inspection kits are available (Basic & Top) to meet your specific needs

Measurement parameters include:
• Surface profil
• Climatic conditions
• Coating thickness

compatible with
ElcoMaster®

available with
Bluetooth®
wireless technology

Blasting Inspection Kits

Elcometer

The Elcometer Blasting Inspection Kit is a surface preparation inspection kit providing a range of inspection equipment to test surface profile and surface contamination of blasted profiles

An Elcometer 456 Gauge and probe can also be supplied. (Order separately if required.)

Measurement parameters include:
- Surface assessment
- Blast equipment inspection
- Surface profil
- Surface contamination
STANDARDS:

Inspection Kits

Elcometer
Protective Inspection Kits 1, 2 & 3

The Elcometer Protective Coatings Inspection Kits 1, 2 & 3 provide the tools required for the on-site inspection of a coating, including surface profile, dewpoint, relative humidity, both wet and dry film thickness and adhesive testing

Available as metric or imperial kits and housed in a sturdy, lightweight carry case, Elcometer Protective Coatings Inspection Kits are invaluable to the operator in the field to ensure the coating is, or has been, applied correctl .

Protective Inspection Kit 1
An entry level inspection kit containing profile, climate, wet and dry film thickness. The Elcometer 456 coating thickness gauge connects via Bluetooth® to ElcoMaster® Data Management Software for paperless quality assurance.

Protective Inspection Kit 2
Like the Protective Inspection Kit 1 but with the addition of the Elcometer 224 digital surface profile gauge with data collection functionality and the Elcometer 319 digital dewpoint meter. Reports via ElcoMaster® can include data from both profile and climate inspections as well as dry film thickness

Protective Inspection Kit 3
A comprehensive digital inspection kit providing gauges with data collection functionality for profile, climatic conditions and dry film thickness

It comes complete with ElcoMaster® data management software with Bluetooth® communication to PC and Android™ Mobile Apps for instant data analysis and reporting for paperless quality assurance.

Measurement parameters include:
- Surface profile
- Surface temperature
- Climatic conditions
- Coating thickness
- Adhesion

compatible with **ElcoMaster**®

available with **Bluetooth**® wireless technology

Protective Inspection Kit for Hazardous Areas

Elcometer

The Elcometer Hazardous Area Inspection Kit is a protective coating inspection kit suitable for use in hazardous areas where electronic equipment is prohibited.

The kit provides all the tools required for the on-site inspection of a coating, including surface profil , dewpoint, relative humidity, both wet and dry film thickness and adhesive testing.

Measurement parameters include:

- Surface inspection
- Surface profil
- Surface contamination
- Climatic conditions
- Coating thickness
- Adhesion
STANDARDS:

Inspection Kits

Elcometer

Automotive Inspection Kit

Produced specifically for the automotive aftermarket and Insurance Assessors, 3rd party consultants, body shops and used car sales, these kits provide an instant measure of the coating thickness of panels. An illuminated magnifier is supplied to enable close inspection of bodywork.

Measurement parameters include:
• Surface temperature
• Surface inspection
• Coating thickness

STANDARDS:

Powder Coating Inspection Kit

Elcometer

The Powder Coating Inspection Kit covers all eventualities in the powder inspection process, Elcometer has produced this kit to enable the inspection of powder coatings on all surfaces.

The digital Elcometer 415 is suitable for measuring the coating thickness on smooth surfaces and the Elcometer 1542, designed for testing the adhesion of the coating, is also included.

Measurement parameters include:
- Surface inspection
- Coating thickness
- Adhesion

STANDARDS:

AS 1580.408.4, AS/NZS 1580.108.1, ASTM B 499, ASTM D 7091, ASTM E 376, ISO 2360, ISO 2808-12, ISO 2808-7C, ISO 2808-7D, NF T30-124

Qualicoat Powder Coating Inspection Kit

The Qualicoat Organisation brings together the ideals of several National Coating Associations into one quality label for the powder coating applied to aluminium architectural applications. The aim of Qualicoat is to establish the minimum standard that plant installations, coating materials and finished products which have been powder coated must meet.

Within this quality label, Qualicoat identifies a range of inspection requirements to be undertaken with regards to the quality control of powder coated products.

The Elcometer Qualicoat Powder Coating Inspection Kit provides the various test instrumentation required to meet the high standards of this organisation.

Measurement parameters include:

- Appearance
- Impact & deformation
- Oven temperature
- Coating thickness
- Adhesion

Surface Contamination Kit

Elcometer 138/2

Measuring the level of contaminants on a surface prior to application of the coating is essential to ensure the quality of the coating and that its optimum lifetime is achieved.

If the coating is applied to a contaminated surface, which is not properly prepared, it could fail prematurely resulting in costly recoating and high maintenance costs.

The Elcometer 138/2 Surface Contamination Kit provides the user with a means for testing invisible surface contaminants including:

- pH
- chloride ions
- iron
- salts

STANDARDS:
AS 3894.6-A, AS 3894.6-D, SSPC Guide 15

Bresle Salt Kit

It is essential that the level of contaminants on a surface is measured prior to application of the coating to ensure the quality of the coating and that its optimum lifetime is achieved.

If the coating is applied to a contaminated surface, which is not properly prepared, it could fail prematurely resulting in costly re-coating and high maintenance costs.

The Elcometer 138 Bresle Kit includes the Elcometer 138 Conductivity Meter. This lightweight, portable conductivity meter accurately measures the salinity of the test samples.

The sensor cartridge can be easily replaced when necessary and displays conductivity in a range of units including: S/cm, S/m, ppm and % salinity.

T13823926	Standard 1.41 mS/cm (1410 µS/cm) Calibration Solution – 6 x 14ml (0.47fl oz) Bottle		

Measuring salt contamination using the Bresle method in accordance with ISO 8502-6/ISO 8502-9
Remove protective backing and foam centre from the patch.

Apply the patch to surface and press firmly around perimeter to achieve a complete seal - ensuring that a minimum amount of air is trapped within the test compartment.
Fill the syringe with 3.0ml of pure distilled water.Insert the syringe into the patch through its foam perimeter, at a 30° angle, so that it passes through the foam into the test compartment.

Inject the water into the test compartment. If necessary remove the remaining air within the compartment.

During an agreed period of time, without removing the needle - withdraw and re-inject the solution back into the patch, at least four times.

At the end of the period extract as much solution as possible.

Remove the syringe from the patch and measure the conductivity of the solution using a suitable Conductivity Meter such as the Elcometer 138.

elcometer

Basic Bresle Salt Kit

Elcometer 138B

new

If a coating is applied to a contaminated surface, which is not properly prepared, it could fail prematurely resulting in costly re-coating and high maintenance costs.

Therefore it is essential to measure the level of contaminants on a surface prior to coating application to ensure the quality of the coating and that its optimum lifetime is achieved.

The Elcometer 138 Basic Bresle Kit includes the Elcometer 135C Bresle Test Patches and the Elcometer 138E Conductivity Meter. This lightweight, portable conductivity meter accurately measures the salinity of the test samples.

The sensor cartridge can be easily replaced when necessary and displays conductivity in a range of units including: S/cm & S/m.

Inspection Kits

Elcometer 138

Abrasive Soluble Salt Test Kit – ASTM D4940

STANDARDS:
ASTM D4940

Abrasives used for blast cleaning surfaces can be contaminated with soluble salts due to the source or the re-use of the blasting media. This contamination can be transferred to the blast cleaned surface and result in accelerated corrosion conditions and also cause premature coating failure, if this contamination is not removed prior to applying the coating.

Testing abrasives on site for soluble salt contamination can be carried out quickly and easily using the Elcometer 138 Abrasive Soluble Salt Test Kit, according to the ASTM D4940 method. A measured volume of the abrasive is mixed with the same volume of water and agitated to allow any soluble salts to dissolve in the water. The resulting slurry is allowed to settle and the filtered water can then be tested using a conductivity meter. The Elcometer 138 Abrasive Soluble Salt Test Kit provides all that is needed to carry out the test in the field or in the laborator .

CSN Chloride, Sulphate & Nitrate Kit

Elcometer 134 CSN

Designed to accurately, measure surface chloride, sulphate and nitrate ions in minutes, the Elcometer 134 CSN Salt kit offers a single kit solution for testing in the field

All the components of the Elcometer CSN Test Kits are pre-measured and pre-dosed for trouble free testing.

Results are recorded in parts per million (ppm) requiring no complicated calculations. Elcometer 134 CSN tests are all designed to use a ratio of 1:1 for easy conversion to µg/cm².

Supplied in an ABS plastic carry case for easy portability around the site, each field kit is supplied with full instructions attached to the inside lid, together with:
• 5 x Chloride tests
• 5 x Sulphate tests, together with 1 x colorimeter, for sulphate testing
• 5 x Nitrate test strips
• 5 x Syringes (without needles)

STANDARDS:
ISO 8502-5, ISO 8502-11, SSP Guide 15

Technical Specification

Part Number	Description
E134-CSN	Elcometer 134 CSN Chloride, Sulphate & Nitrate Test Kit
Measuring Range	0 - 100µg/cm² (0 - 100ppm)
Scale Resolution	1µg/cm² (1ppm)
Sample Time	1 - 5 minutes (approximately)
Storage Temperature	Not exceeding 25°C (77°F)
Dimensions	360 x 320 x 140mm (14.2 x 12.6 x 5.5")
Weight	1.76kg (3.8lb)
Packing List	5 x tests (containing: 5 x chloride tests, 5 x nitrate test strips, 5 x sulphate tests, 5 x syringes) 1 x colorimeter, carry case and operating instructions

Accessories

Standard wand	T27016867	
A universal flat sponge to sui almost all applications		
Spare flat sponge se	T27018050	
Pack of 3 sponges; 150 x 60 x 25mm (6 x 2.3 x 1")		

Roller sponge wand	T27016960
Ideal for large flat surfac inspection	
Spare roller sponge	T27018051

Separate wand adaptor	T27016999
with belt clip - converts the gauge into a separate pinhole detector	
Telescopic wand adaptor	T27016998
with belt clip - extends to 1m(39"), ideal for floors or high area	

Extension piece	T27016965
420mm (16.5") extensions to expand operators reach	
Additional extension pieces can be connected to each other	

Wetting agent	T27018024
50ml (1.7floz) bottle - helps aid the fast detection of pinholes. Simply add to the water used to dampen the sponge	

Return cable - 4m (13')	T99916954
supplied as standard, complete with crocodile clip and plug	
Return cable - 10m (32')	T99916996
supplied on a drum, complete with clip and connection plug	

Pulsed DC Holiday Detector Inspection Kit

Elcometer 280

The Elcometer 280 is a 'stick type' holiday detector which has been designed to make pulsed DC high voltage holiday detection safer, easier and more reliable than ever before.

Using state of the art electronics, the Elcometer 280 allows users to inspect coatings - without connecting the earth return lead to the component substrate - ideal for inspecting large surfaces and pipelines.

The Elcometer 280 uses the high voltage pulsed DC technique to detect holidays in coatings - even if the coating is damp, dirty or slightly conductive.

From the two stage safety switch, bright LED's and screen icons signifying when the high voltage is on, to the extended ribbing to protect the user from spark creep, the Elcometer 280 sets the standard for high voltage measurement safety.

Duct Deposit Measuring System

Controlling ducting deposits and monitoring their build-up is essential to maintain hygiene standards and reduce fire risks in heating and ventilation systems

The Elcometer 456 Duct Deposit Measuring System has been specifically designed to meet the requirements of the DTT (Deposit Thickness Test) in HVCA's (Heating & Ventilation Contractor's Association) Guide to Good Practice, for the measurement of dust and grease deposits within ventilation systems and kitchen ducts made of ferrous metals.

By using the Elcometer 456 Ferrous Top Gauge with the specially designed probe and duct cleaning templates, readings can be taken of the deposit thickness on a specific test area, before and after cleaning

ElcoMaster® software, supplied as standard with the Elcometer 456 Duct Deposit Measuring System includes a template designed specifically for reporting duct deposit measurements.

Appearance

Gloss, Haze, DOI, Colour

Visual appearance can determine a person's perception of a product. Colour and Gloss are two key parameters that are used to define a product's overall quality. Perception is subjective, but Elcometer's range of instruments quantify the appearance criteria.

Gloss: The ability of a surface to reflect light without scattering is known as gloss. Gloss is measured by directing a constant intensity light beam at a fixed angle to the test surface and then by monitoring the amount of reflected light at the same angle. Different surfaces require different reflective angles

Elcometer Glossmeters cover the range necessary to measure almost any surface from high gloss to matt, from large to small surfaces.

Haze: Some materials appear to have a considerable difference in gloss yet give comparable readings when measured with a traditional glossmeter. These materials can be different ated by measuring at a second angle and comparing the two readings using a haze meter. Reflectance haze is defined by ASTM D4039 as the difference between gloss at 60° and the gloss at 20°

Rspec: Peak specular reflectance is a measure of the peak gloss value of a surface; this value is obtained very close to the specular angle.

Distinctiveness of Image (DOI): Measures the effect of surface textures such as orange peel on a reflected image. Reflections seen in a totally smooth high gloss surface are completely sharp and distinct. As surface textures increase the image becomes fuzzy and distorted.

**Colour:** A material's ability to absorb certain wavelengths of light and reflect others is defined as its colour. For example a black material reflects no light across the complete colour spectrum. A pure white material reflects all of the light, whilst all other colours reflect light at different points of the spectrum. Colour is quantified by the material's Red, Green and Blue (RGB) values.

Gloss & Haze Measurement

Visual appearance can determine a person's perception of a product. Perception is subjective. A key measurement parameter used to define and quantify a product's overall visual quality is gloss.
Gloss is measured by directing a constant intensity light beam, at a fixed angle, on to the test surface and then monitoring the amount of reflected light from the same angle. This specular reflectance is measured using a glossmeter.

Different surfaces require different reflective angle

High Gloss

High Gloss
Surfaces with a brilliant or highly polished finish reflect images clearly. This distinct reflection is caused by the incident light reflecting on the surface in a specular direction.
Semi & Matt Gloss
Semi and matt surfaces reflect images less distinctly and with reduced intensity.

On semi or matt surfaces light not only reflects in a specular direction but also is scattered causing the reflected image to appear diffused.

Semi & Matt Gloss

Choosing the correct angle for gloss measurement

Gloss measurement is based on the amount of light reflected on the surface relative to a polished glass reference standard, measured in Gloss Units (GU). The amount of light that is reflected on the surface is dependent on the angle of incidence and the properties of the surface.

Gloss is categorised as either matt, semi or high gloss. In order to determine the most appropriate measurement angle start with a glossmeter set at a 60° angle of incidence.

If the result is between 10 - 70GU, the coating is termed 'semi-gloss' and should be measured using the 60° angle. If the result is less than 10GU, the product is 'low gloss' and should be measured using the 85° angle and if it is greater than 70GU, the product is known as 'high gloss' and should be measured using the 20° angle.

All three angles should be recorded (20, 60 & 85°) when measuring gloss on anodised metals to ensure a complete understanding of the specular reflectance between the coating and the metal substrate.

Gloss Range	60° value	Measure with
High Gloss	> 70GU	20°
Semi Gloss	10 - 70GU	60°
Low/ Matt	< 10GU	85°

% Reflectance (%
% Reflectance compares the amount of light energy transmitted and received by a glossmeter and expresses the value as a percentage. The shinier a surface is, the closer the value will be to 100%.

Whilst the Gloss Unit (GU) scale is linear, each angle of incidence has a different measurement range; 0 – 2000GU (20°), 0 – 1000GU (60°), 0 – 160GU (85°).

% Reflectance displays the measurement value as a percentage relative to the selected angle of incidence. For example, a value of 1000GU at 20° would be expressed as $50\%_{20}$ and 500GU would be expressed as $25\%_{20}$, but at 60° this would be expressed as $50\%_{60}$.

Haze (HU)
Haze causes a drop in reflected contrast and causes 'halos' to appear around the reflected light sources, dramatically reducing the visual qualit .

In accordance with ASTM D4039 haze is defined as the numeric difference between the specular reflectance at 60° and 20°.

This is expressed in Haze Units (HU).

Gloss & Haze Measurement

Elcometer 480   Glossmeters

The Elcometer 480 range are easy to use glossmeters which combine high accuracy, repeatability and reproducibility with functionality making them the most advanced glossmeters on the market today.

- Small, robust & ergonomic

- 3 - 10 readings per second

- Repeatable, reproducible & accurate

- Multiple angles; 20°, 60°, 85°

- 40,000 reading memory in up to 2,500 batches

- Date and time stamped readings

- USB & Bluetooth® data output

- PC, iPhone or Android™ compatible

- Automatic gauge & tile diagnostics

- Auto calibration tile recognition via RFID†

- 40 user definable limit standards

- Standard, auto repeat and scan modes

- Differential mode with pass/fail

- Display readings, statistics, graphs & batch review

STANDARDS:

Gloss & Haze Measurement

Elcometer 480

Small, robust and ergonomic, the Elcometer 480 range of glossmeters have been designed to exceed the demands of industry today.

Combining easy to use, multi-lingual menu structures with exceptional repeatability, reproducibility & accuracy, the Elcometer 480 provides users with best in class hand-held gloss measurement.

Using state of the art design and manufacturing techniques provides world leading features and functionality - reliably measuring & recording Gloss, % Reflectance & Haze on any material, including paint, plastic, ceramic or metal.

The Elcometer 480's rapid LED technology accurately measures up to 3 angles at the same time at a rate of 10 readings per second.

Measurements can be instantly transferred to PC, iPhone, Android™ or other mobile devices via USB or Bluetooth®.

Using the ElcoMaster® software, professional reports for gloss and other appearance measurements can be quickly generated. Alternatively gloss readings can be combined with other key measurement parameters such as coating thickness, adhesion and oven temperature profile - within the same software package.

Gloss & Haze Measurement

Elcometer 480

Glossmeters

The Model Range

The Elcometer 480 is available as either a simple entry level 60° glossmeter or state of the art Single, Dual or Triple angle variants.

- Single: 60°

- Dual: 20° & 60°

- Triple: 20°, 60° & 85°

Memory and Batching

Store 40,000 date and timed stamped readings in up to 2,500 user definable alpha-numeric batches.

Readings can be transferred to PC, iPhone, Android™ or other mobile devices via USB or Bluetooth® for instant reporting using ElcoMaster® software.

Display Modes

Fully customisable, scratch and solvent resistant colour LCD allows the user to display:

- Gloss, % Reflectance or Haze reading

- Statistics

- Readings and Differential with pass/fai

- Trend Graph

- Analogue Scan Bar
Standard, Auto Repeat & Scan Modes

No two inspections are the same. It is for this reason that the Elcometer 480 is equipped with three measurement modes:

- Standard Mode: Press the measure button to take an individual spot measurement.
- Auto Repeat Mode: When the glossmeter is slid over the surface a measurement of all three angles is automatically taken at a user definable rate between 10 - 180 readings per minute. When enabled all the individual readings are stored into memory.
- Scan Mode: As the glossmeter slides over the entire surface area the gauge measures all three angles at a continuous rate of 10 readings per second. When stopped, the gauge displays and stores the average, highest and lowest values - ideal for checking a sample's overall uniformity.

Glossmeters

Accuracy & Repeatability

Advanced electronics and a superior optical design combines highly accurate, repeatable and reproducible measurements with industry leading inter-instrument agreement - across its entire 0 - 2,000GU range.

Range	0-10GU	10-100GU	100-2000GU
Repeatability	±0.1GU	±0.2GU	±0.2%
Reproducibility	±0.2GU	±0.5GU	±0.5%

Limit Standards and Differential Mode with Pass/Fai

When visual appearance is critical Master Standards are created. These are generated and approved by the customer and then used by manufacturers as part of their quality control inspection regime. As these Master Standards have been visually approved they often do not have numerical gloss values assigned.

In order to avoid subjectivity between inspectors, the Elcometer 480 can automatically generate and store the nominal (target), highest & lowest acceptable gloss values (Limits) from the Master Standard.

Up to 40 Limits for each customer's Master Standards can be stored within, and recalled from, the gauge's 'Limit Standard' memory.

When Limit Standards are used in combination with the gauge's Differential Mode, the Elcometer 480 displays the measurement value together with the difference from the nominal (target) value.

Readings outside the Limit Standard are displayed in red, providing quick Pass/Fail analysis.

Due to the Elcometer 480's industry leading inter-instrument agreement, once a Master Standard Limit has been created, the gauge can transfer these values to other Elcometer 480 glossmeters, via the ElcoMaster® software's Library of Limit Standards, at any time.

Information from multiple glossmeters can be combined into a single inspection report within ElcoMaster®, ideal for multiple production and assembly lines.

Create instant reports with ElcoMaster®

What you do with the collected data is just as important as taking the readings themselves.

PDF

Email

Cloud

USB

Bluetooth®

ElcoMaster® is a fast, easy to use software solution for all your data management and quality assurance needs, preparing professional inspection reports at the click of a button.

Data transferred to ElcoMaster® includes;
- 20° 60° & 85° Gloss Units (GU)
- Haze Unit (HU)
- % Reflectance (%)
- Date & time of each reading
- Limit Standard values
- Batch information & statistics
- Calibration information including date/time, serial number & tile values

Whether you are in the field or on the factory floor, using the ElcoMaster® Mobile App users can;
- Store live readings directly on to a mobile device and save them into batches
- View graphs in real-time whilst carrying out the inspection
- Add notes to individual batch reading
- Add photographs of the test surface to each individual batch reading at the click of a button
- Plot individual readings on to a location Map photograph or diagram via the mobile device's internal GPS
- Inspection data can be transferred from mobile to PC for further analysis and reporting
- Generate instant .pdf[1] report for submission

Gloss & Haze Measurement

Elcometer 480

Using the Limit Standard Library within ElcoMaster®, Limit Standards from one gauge can be transferred to other gauges optimising the inspection process.

Connect
Connect gauge via Bluetooth® to see live readings directly on the phone and save them into batches.

Review
Review average, maximum and minimum readings instantly.

Manage & Print
Store all data; gloss, dry film thickness, surface profile, climate and manual reports in easy to manage folders.

Photos & Notes
Add photos, notes and comments.

Image Collection
Use measurement location points on images to indicate the position for the next reading.

Combine
Combine different inspection parameters (such as gloss, dry film thickness, oven temperature profile and adhesion) together with images, notes and other project specific information into reports.

Collaborate
Share inspection data securely via the Cloud and collaborate on projects using the instant messaging feature in ElcoMaster®.

Send
Email inspection data from a mobile device to a PC for further analysis and reporting or transfer data via the Cloud.

Elcometer 408

Triple Angle Gloss & DOI Meter

STANDARDS:
ASTM D523, ASTM D2457,
ASTM E430, ASTM D5767,
DIN 67530, DIN EN ISO 2813,
JIS Z 8741, ISO 7668

The Elcometer 408 provides the very latest in gloss measurement technology, providing accurate gloss, haze and distinctiveness of image (DOI) analysis in a single reading.

Press button once to measure all parameters; gloss, haze, DOI, Rspec & RIQ

Display and download Goniophotometric profiles

USB or Bluetooth® data output

Stores up to 999 readings with full goniophotometric profiles in user definable batche

On screen statistics with trend & measurement graphs

Integrated calibration tile for fully automatic error-free calibration
Easy to read large colour screen with adjustable brightness

Fast and simultaneous measurement of all parameters
On screen graph highlights trends in the measured batch

Gloss & DOI Meter Definition

Distinctiveness of Image (DOI)
Distinctiveness of Image measures the sharpness of a reflected image in a coating surface. Similar coatings may have identical gloss values but visually the quality may be very different. A visually poor coating may have a highly textured dimpled appearance known as "orange peel". When a reflected object is viewed in such a coating the image becomes fuzzy and distorted.

A surface that has a perfect undistorted image returns a value of 100. As the value decreases the image becomes more distorted.

Distinctiveness of Image (DOI)

Haze (HU) & Log Haze (HULog)
High quality gloss surfaces have a clear, deep, brilliant finish. Haze causes a drop in reflected contrast and causes halos to appear around light sources, these unwanted effects dramatically reduce visual qualit .

Undetectable by traditional gloss meters the Elcometer 408 measures Haze Units in accordance with ASTM E430 at the same time as simultaneously measuring gloss and DOI.

Haze (HU) & Haze Log (HULog)

Peak Reflectance (Rspec
Rspec is the peak reflectance measured over a very narrow angle in the specular direction and is very sensitive to any surface texture, waviness or rippling. When Rspec is equal to the gloss the surface is smooth. Rspec drops as the surface texture increases.

Peak Reflectance (Rspec

Reflected Image Quality (RIQ
Reflected Image Quality provides greater sensitivity when evaluating highly reflective coatings and the specular / diffuse element of lower gloss materials
A surface that exhibits a perfect undistorted image returns a value of 100, as the values decrease higher surface texture is present and the image sharpness reduced.

Goniophotometric Profil
The gloss, haze, DOI and Rspec values produced by the Elcometer 408 can be used to assess the visual quality of any surface. The full range of goniophotometric curves can be downloaded to a computer for detailed understanding of specular reflectance. The Elcometer 408 can also be used to quantify an orange peel finish or a substandard coating with a low DOI.

Reflected Image Quality (RIQ

Goniophotometric Profil

Elcometer 408   Triple Angle Gloss & DOI Meter

Accurate

- Fast and simultaneous measurement of gloss, haze, DOI, Rspec and RIQ

- Each instrument is supplied with a Calibration Certificate

Simple

- Bright, easy to read LCD screen displays the gloss value, statistics & graphs

- Display measurements are user definabl

- Each set of readings is time & date stamped

Flexible

- Triple (20/60/85°) angle for maximum accuracy and resolution in all gloss applications

- Bluetooth® or USB download to ElcoMaster® data management software for instant analysis

Durable

- Robust aluminium construction ensures optical stability

- 17hrs+ continuous operation or 20,000+ readings

- Compact and portable instrument with integrated tile holder

Efficient

- Easy menu-driven user interface in multiple languages

- Clear, illuminated display showing up to five parameters on scree

- On board trend analysis with gloss and image quality (IQ) values

Powerful

- On board memory for 999 readings with full goniophotometric profile

- Internal battery is fully rechargeable in 2.5 hours

Elcometer 6085

STANDARDS:
AS/NZS 1580.601.3, ASTM C 609, ASTM D 2244, ASTM E 1164, ASTM E 308, ASTM E 313, BS 8493, DIN 5033-2, DIN 5033-3, DIN 5033-4, DIN 5033-7, DIN 6174, EN 12373-12, EN 13523-15, ISO 7724-2, ISO 7724-3, JIS K 5600-4-5, JIS K 5600-4-6, NF T36-006, NF X08-012-1, NF X08-012-2

Portable Sphere Spectrophotometer

The Elcometer 6085 is an affordable sphere spectrophotometer, designed to give fast, precise and accurate colour measurement information on materials ranging from paper and paint to plastics and textiles.

- Lightweight, compact, portable instrument
- Diffuse/8° sphere optical geometr
- Fixed 8mm aperture
- Large, easy-to-read high resolution graphical colour LCD display
- Opacity and colour strength measurement
- Simultaneous measurement of both specular component included and specular component excluded
- Rugged construction
- Reliable detent lock
- Rechargeable battery for portable use

Key Features

- **Measuring Functions and Indices**
  The Elcometer 6085 provides absolute and difference measurements for the following colourmetric systems. These values can be obtained from any of the nine illuminants with 2° or 10° observer angle: L*a*b*, DL*Da*Db*, L *C*h°, DL*DC*DH*, DE*ab, DECMC, DE CIE94 and XYZ. Whiteness and Yellowness per ASTM E 313-98.

- **Pass/Fail Mode**
  The instrument stores up to 1000 standards with tolerances for easy pass/fail measurement. A simplified green tick shown on screen shows a straight forward pass indication or a red cross shows a fail. Results are shown at a glance showing detailed colour comparison data for analyst.

- **Quick Colour Compare**
  A quick measurement can be taken to compare two colours. This allows the operator to take quality control readings in a time efficient manner without having to create tolerances or store dat

- **The Sphere**
  The Elcometer 6085's diffu ing sphere is made of Spectalon®, a durable, highly reflective material designed to perform in a rigorous production environment. The diffusing material prevents degradation due to the flaking and chipping of the sphere wall material.

- **Opacity, Colour Strength and Shade Sorting**
  The instrument can measure opacity as well as three colour-strength options: chromatic, apparent and tri-stimulus calculations. The Elcometer 6085 also performs 555 shade sorting. This is an important consideration in the colour quality control of manufactured products involving plastics, painted or textile materials.

- **Texture and Gloss influenc**
  To determine the influence of the specular component, the 6085 allows simultaneous measurement of both specular - included (colour) and specular-excluded (appearance).

- **User friendly Ergonomics**
  In addition to on-board programmes to assist the operator in the measurement process, the instrument itself is highly user-friendly. It is compact and lightweight with an ergonomic overmold design that provides a smooth and comfortable grip. The flip-back shoe is designed to withstand heavy use, and has a reliable detent lock. Read-outs are large and easy to see with a high resolution colour LCD screen. A rechargeable battery pack allows extended operation of the instrument.

Colour Assessment Cabinets

Colour assessment cabinets are suitable for any industry where there is a need to maintain colour consistency and quality. These include paint, textiles, automotive, ceramics, cosmetics, dyeing, food, footwear, inks, knitwear, packaging, printing, etc.

The Elcometer 6300 range of colour assessment cabinets, also known as light cabinets or colour matching booths, ensures accurate visual colour assessment and colour comparison. Constructed from steel, Elcometer's lightweight colour assessment cabinets are supplied with different light sources used to simulate different conditions.

Light sources available:

- Artificial Daylight (D65
- Point of Sale Illuminant (TL84 supplied with UK 240V/EUR 220V models, CWF supplied with US 110V models)
- Home Illuminant (Illuminant A)
- Ultraviolet Illuminant (UV)
- Alternative Point of Sale Illuminant (TL83 emits a reddish, yellow energy)

The Elcometer 6300 Colour Assessment Cabinets also enable easy detection of metamerism. Metamerism is commonly discussed in the terms of illuminants, where two samples appear the same (spectrally matched) under one illuminant, but not another. For example, two car door panels appear the same colour in daylight, but, under a streetlight at night, appear as completely different colours

There is a choice of 3, 4 or 5 light sources with the Elcometer 6300 range. Cabinets are either available with manual light source selection or digital light source selection. The digital cabinets are able to programme the sequence of lights and the duration of each illumination. The lamp timer function, which is standard on all digital cabinets and as an option on manual cabinets, measures the number of hours the D65 daylight bulb has been in operation.

Colour Assessment Cabinet Overview

Model	Light Sources					Weight	Control

Illuminant A	Home Illuminant
UV	Ultraviolet Illuminant

Colour

Elcometer 6210

RAL Colour Charts

A system of reference colours, enabling many industrial products to be identified, compared and classified

Ideal for use with Elcometer 6300 Colour Assessment Cabinets.

Available as compact colour charts suitable for colour comparison of varnishes, powder coatings & plastics.

Elcometer 6210 RAL Chart K1

High gloss colour chart, 16 colours per page, each with a 1.8 x 2.8cm colour illustration.

Part Number:	K0006210M013

Elcometer 6210 RAL Chart K5

Fan deck with RAL Classic colours, complete with U-shaped protective cover. Each colour has a full page 5.0 x 15.0cm, perfect for colour combination and colour comparison.

Part Number:	K0006210M001

Elcometer 6210 RAL Chart K7

Fan deck with RAL Classic colours, complete with U-shaped protective cover. Features 5 colours per page, with each colour swatch measuring 2.0 x 5.0cm.

Part Number:	K0006210M002

elcometer

Dispersion & Density

From the development of coatings, inks & cosmetics in the laboratory to testing during the production process, quick and precise measurement of the particle size of the material (Dispersion) and volumetric mass (Density) are essential measurement techniques required for reliable and repeatable formulations.

Elcometer's stringent manufacturing standards ensure that the highest level of precision and quality is maintained for all its gauges in order to comply with the requirements of the industries where the grinding process is involved, particularly in the fields of wet paints and powder, varnishes, printing inks and cosmetics.

Dispersion
The comprehensive range of Elcometer fineness of grind gauges consists of stainless steel blocks with a precision ground scraper. Each block has either one or two channels, precision ground in a uniformly increasing depth from zero at one end to a specified depth at the other, identified by the scale on the gauge.

Density
To maintain consistency of a coating, the Density should remain constant from batch to batch.

Density Cups, also known as Specific Gravity Cups or Picnometers, are used to determine the mass per unit volume (Specific Gravity) of a liquid at a given temperature.

Specific Gravity is defined as the ratio of the density of a given substance to the density of water, when both are at the same temperature.

As the Specific Gravity Cup is an exact measurement of the volume of the liquid, it is imperative that the exact weight of the sample is obtained.
Elcometer offers a range of cups and laboratory balances for accurate measurements during the development of a coating.

Dispersion & Density

Elcometer 2020

Fineness of Grind Gauges (Dual Channels)

The Elcometer Fineness of Grind Gauges are used to determine the particle size and fineness of grind of many materials including paints, pigments, inks, coatings, chocolates and other similar products.

These two channel gauges, are made of hardened stainless steel and have two grooves with a graded slope (dependent on the model chosen).

Graduated in microns, mils, NS (Hegman) or PCU (North), the gauges have a tolerance of ±2µm (0.08mil). The groove width for all models is 12mm (0.47") with a groove length of 127mm (5.0").

STANDARDS:
ASTM D 1210, AS/NZS 1580.204.1
DIN 53203, EN 21524,
FTMS 141 4411.1, ISO 1524,
JIS K 5600-2-5, NF T30-046

Technical Specification   C

How to use a Fineness of Grind Gauge

The material is placed on the deepest part of the groove and, using the scraper provided, drawn up the slope - the particle size is indicated where the material stops.

○ Optional Calibration Certificate available

High Precision Grindometer (Single Channel)

Elcometer 2050

This single channel precision gauge is used to determine particle size and fineness of grind for many materials including paints, pigments, inks, coatings, chocolates and other similar products.
Manufactured out of hardened stainless steel each gauge is graduated in microns on the top to an accuracy of ±1µm (0.04mil). The groove width is 12mm (0.47") and the groove length is 200mm (7.87").

The High Precision Grindometer has a single groove.

NPIRI Fineness of Grind Gauge

This precision gauge is used to determine particle size and the fineness of grind of particles in printing inks according to the National Printing Inks Research Institute (NPIRI) scale.

As ink particles are so fine the two grooves of the gauge have a gentle gradient allowing a scale of 2.5µm for better resolution.

The groove width is 25mm (0.98") and the groove length is 165mm (6.5"). The NPIRI scale is displayed alongside the microns scale. The NPIRI gauge and its scraper are made of hardened stainless steel.

Density Cup

Elcometer 1800

The Elcometer 1800 is a stainless steel precision cup for determining the specific gravity or density of paints and similar products.

The density cup consists of a cylindrical container and lid with a hole for the exhaust of excess liquid.

STANDARDS:
ASTM D 891-B, ASTM D1475, DIN 53217-2, FTMS 141 4183, ISO 2811-1, JIS K 5600-2-4, NBN T22-110, NFT 30-020

Technical Specification   C

Part Number	Description	Volume/ Capacity	Certificat
K0001800M001	Elcometer 1800/1 Density Cup stainless steel	50cc	
K0001800M002	Elcometer 1800/2 Density Cup stainless steel with calibration certificat	50cc	●
K0001800M005	Elcometer 1800/5 Density Cup stainless steel	100cc	
K0001800M006	Elcometer 1800/6 Density Cup stainless steel with calibration certificat	100cc	●

How to use a Density Cup:

- Weigh the Cup and Lid when empty
- Fill with the liquid
- Place lid on the Cup, removing excess liquid*
- Weigh the Density Cup when full
- Divide the weight by the cup volume/capacity to determine the Specific Gravit

*Each Cup has an escape hole in the lid to allow excess liquid to escape. Any excess liquid should be removed before weighing.

The formulae for calculating Density and Specific Gravity are

$$\text{Density} = \frac{\text{Weight}}{\text{Unit Volume}}$$

Note: 50cc = 50cm³ = Volume
100cc = 100cm³ = Volume

$$\text{Specific Gravity} = \frac{\text{Density of the Material}}{\text{Density of Water at the Same Temperature}}$$

● Certificate supplied as standard.

Dispersion & Density

Elcometer 8720

Compact Balance

The Elcometer 8720 KB is a compact, low cost balance which offers extensive weighing functions selectable by the user.

The Elcometer 8720/1 Compact Balance is very easy to use and is supplied with a protective working cover and an adjusting test weight to allow the user to quickly adjust the calibration.

Viscosity

Flow Cups, Dip Cups, Rotational & Krebs

Viscosity is perceived as 'thickness' or resistance to pouring, but there is more to viscosity than this. All fluids have an internal friction between molecules, which **determines how well fluid flows. Due to this** internal friction, energy is required to move the liquid and viscosity is the measure of the **resistance to flow.**

Measuring Viscosity
Elcometer manufactures and supplies a wide range of viscosity gauges from flow cups to dip cups to rotational viscometers.

Flow Cups: The process of flow through an orifice can often be used as a relative measurement and classification of viscosit .

This measured kinematic viscosity is generally expressed in seconds of flow time which can be converted into Centistokes using a viscosity disc calculator.

Dip Cups: Using the same principle as flow cups, dip cups (Frikmar, Zahn, Shell etc.) can be used to provide a quick viscosity measurement either on-site or on the shop-floo .

Rotational: Krebs and Rotational viscometers are used to determine the viscosity of liquids which do not depend solely on temperature or pressure.

Flow Measurement: Simple to use instruments that measure the fluidity and flow of coatings, especially thick or paste-like materials.

Definition :

Viscosity: A measure of the resistance of a liquid to flo .

Kinematic Viscosity: The absolute viscosity of a fluid divided by the density of the fluid. Also known as the coefficient of kinematic viscosi .

Centipoise: A unit of measurement of which water is the standard at 1cP.

Newtonian fluid : Are fluids that continue to flow at a given temperature, such as water and some oils - regardless of the forces acting on it. No matter how fast it is stirred or mixed, Newtonian fluids will always behave in the same manner.

Newtonian fluids are typically measured with flow and dip viscosity cups

Non-Newtonian fluid : Are fluids which change viscosity when a force is applied, e.g. paints and ketchup, etc.

Non-Newtonian fluids are usually measured using Rotational Viscometers.

Viscosity - Flow Cups

Elcometer 2350 & 2354

Viscosity Flow Cups

Viscosity Flow Cups are very easy to use instruments made of anodized aluminium with a stainless steel orifice, for measuring the consistency of paints, varnishes and similar products. The measured kinematic viscosity is generally expressed in seconds(s) flow time. If the Standards stipulate conversion methods the flow time can be converted into Centistokes (cSt) using the Elcometer ElcoCalc™ Mobile App.

Calibration certificates which offer traceability and assurance that each viscosity cup has been individually tested and comply to Standards are also available.

The cups can be supplied separately or with an adjustable stand which includes a precision level and an overflow glass draw plate. They can also be supplied with a flow jacket for temperature control (thermojacket)

Viscosity Flow Cups - Cup Designs

ISO   BS   FORD/ASTM   DIN   AFNOR

Viscosity Cups

Viscosity Cup Conversion

The table below lists the major flow cup types together with a conversion chart of Efflu Time (in seconds) to Viscosity in Centistokes (cSt). It has been constructed from the various International Standard Calculators.

Each cup design is unique, care must be taken when comparing viscosity values between different cup types. These values are the absolute values and do not include the allowed tolerances, as these differ considerably between each of the Standards

Back: No.3-4-5-6 cups according to ISO and Zahn 3 |

Thermometers

To accurately measure flow for viscosity the temperature needs to be 23°C ± 2°C (73.4°F ±3.6°F). Here are a range of thermometers from Elcometer.

Viscosity - Dip Cups

Elcometer 2437 & 2435   Viscosity Dip Cups - Frikmar

Thanks to its handle, this cup is very easy to use to perform checks on site or during the manufacturing process. It is ideal for measuring the consistency of paints, varnishes and other similar products.

Simply dip the cup into the product to be measured, lift it out and measure how long it takes for the contents to empty through the orifice

The measured kinematic viscosity is generally expressed in seconds (s) flow time, which can be converted to Centistokes (cSt) if the Standard stipulates a conversion method.

Several ranges are available, according to the Standards being used; from 7 to 1100cSt.

new

STANDARDS:
DIN: DIN 53211 (cup 4 only)
FORD/ASTM: ASTM D 1200, D 5125
ISO: ISO 2431
AFNOR: NF T30-014

compatible with ElcoCalc™

Lory Viscosity Cup

Elcometer 2215

The Elcometer 2215 Lory Viscosity Cup is a conventional cylindrical cup with a needle fixed into the bottom for quick measurements on-site or during production

The cup is first dipped into the product to be measured, which then empties through the escape hole. Unlike other Viscosity cups, the flow time is measured as soon as the point of the needle appears.

Technical Specification

Viscosity - Dip Cups

Elcometer 2210

Zahn Viscosity Dip Cups

The Elcometer 2210 Zahn Dip Cup is a small U-shaped cup suspended from a looped wire. This method is ideal for measuring the consistency of paints, varnishes and similar products.

Simply dip the cup into the product to be measured, lift it out and measure how long it takes for the contents to empty through the orifice

There are five cups with five different orifice sizes available, ranging from 5 to 1840cSt.

STANDARDS:
ASTM D 1084-D, ASTM D 4212

compatible with ElcoCalc™

Shell Viscosity Dip Cups

Elcometer 2310

The Elcometer 2310 Shell Viscosity Dip Cups are stainless steel cups for quick measurements on-site or during production. These cups are often used in the printing or ink industry.

Simply dip the cup into the product to be measured, lift it out and measure how long it takes for the contents to empty through the orifice

The measured kinematic viscosity is generally expressed in seconds (s) flow time, which can be converted into Centistokes (cSt).

There are six different orifice diameter sizes available, for measurements between 2 and 1300cSt.

Viscosity - Standard Calibration Oils

Elcometer 2410

Elcometer Viscosity Cup Standard Calibration Oils

In order to check the viscosity cup's calibration or to certify it for ISO purposes, it is imperative that viscosity cup standard calibration oils are used.

Standard oils have a specific drain time, dependent upon the viscosity cup type (Ford, Shell, Zahn etc.) and the orifice or cup number used

To check the viscosity cup, use the standard viscosity oils in place of the liquid and measure the drain time.

Specific calibration oils can only be used with specific flow and dip cups. Please use the table below to determine which calibration oil is required with each cup, or contact Elcometer. Viscosity oils are supplied in ½ litre (1 pint) bottles.

Technical Specification   C

| Part Number | Dip Cups | | | | | Flow Cups | | | Kinematic Viscosity at 25°C (77°F)[†] | Certificat |

elcometer

Rotational Viscometers

Available in four versions with a choice of low to medium or medium to high viscosity ranges, either manually or PC controlled, the Elcometer 2300 range of rotational viscometers can be used to measure the viscosity of liquids in accordance with ISO 2555 and a number of ASTM standards.

STANDARDS:
AS/NZS 1580.214.5, ASTM D 1084-B, ASTM D 2196, BS 3900-A7-2, ISO 2555, ISO 2884-2

Low to medium or medium to high viscosity versions - manually or PC controlled via ViscosityMaster™

Clear, backlit LCD displays:

- Viscosity reading (cP or mPas)
- Spindle rotation speed
- % torque
- Sample temperature
- Auto range
- Shear rate & shear stress

Wide range of spindles for various viscosity and shear rate measurements

Automated Krebs test - set up and press 'Start'

Audible warning if viscosity reading exceeds the limits set by the user

Temperature probe supplied for increased accuracy of measurement

supplied with
ViscosityMaster™

ViscosityMaster™

Elcometer ViscosityMaster™ Software
ViscosityMaster™ is the powerful, yet easy to use software supplied with all Elcometer 2300 Rotational Viscometers.   Specifically designed to maximise the versatility and usability of the viscometer, data can be stored along with associated images, test notes and all related test information.

ViscosityMaster™ makes it easy to collate and use the data recorded. Whether the data is required for analysis or to create professional reports for distribution to customers or colleagues, ViscosityMaster™ can deliver. With inbuilt report templates and easy access to all data, images and other associated files, ViscosityMaster™ makes managing data quick and easy.

● Calibration Certificate supplied as standard.

Rotational Viscometers

Elcometer 2300

Accessories

Spindles

Each Elcometer 2300 is supplied with a set of stainless steel spindles as standard, suitable for both Newtonian & non-Newtonian fluids

Elcometer 2300 RV-L is supplied with spindles L1-L4 for low to medium viscosity testing.

Elcometer 2300 RV-R is supplied with spindles R2-R7 for medium to high viscosity testing.

A large R1 spindle (underlined) can be purchased separately.

Part Number	Description
KT00230019698	Spindle Set: Type L1 to L4 for Low to Medium Viscosity Testing
KT00230019699	Spindle Set: Type R2 to R7 for Medium to High Viscosity Testing
KT00230019700	R1 Spindle

Small Sample Adaptor

The small sample adaptor consists of a cylindrical sample chamber which can be used in conjunction with spindles TL & TR to accurately obtain viscosity measurements, shear rate and shear stress of sample volumes between 8 - 13ml (0.27 - 0.44fl.oz).

The TL spindles are for low to medium viscosity samples and TR spindles are for use with medium to high viscosity samples.

Part Number	Description
KT00230019702	Adaptor Kit for Small Volume Samples[‡]
KT00230019784	Adaptor Kit for Small Volume Samples & Integrated Temperature Sensor[‡]
KT00230019703	Small Volume Spindle Set: Type TL5 to TL7 for Low to Medium Viscosity Testing
KT00230019704	Small Volume Spindle Set: Type TR8 to TR11 for Medium to High Viscosity Testing

‡ Small volume spindle set required

Low Viscosity Adaptor

The low viscosity adaptor consists of a cylindrical sample chamber and is supplied complete with spindle. Used to accurately obtain viscosity measurements, shear rate and shear stress of low viscosity materials from 1cP (mPas), the stainless steel chamber can hold a sample volume from 16 - 18ml (0.54 - 0.61fl.oz).

Running temperature controlled water through the water jacket supplied keeps the sample at a constant specifi d temperature of between 0°C and 100°C (32°F and 212°F).

Part Number	Description
KT00230019710	Low Viscosity Adaptor Kit with Spindle

Viscosity - Rotational

Elcometer 2300   Rotational Viscometers

High Temperature Adaptor
Ideal for use with materials such as hot resins, bitumens and oils, the high temperature adaptor allows precise measurement of viscosity at high temperatures. It can accurately obtain viscosity measurements, shear rate and shear stress from 1-2100cP (mPas)‡ up to temperatures of 200°C (392°F).

The stainless steel chamber can hold a sample volume from 16 - 18ml (0.54 - 0.61fl.oz) Each adaptor is supplied complete with a spindle.

Part Number	Description
KT00230019711	High Temperature Adaptor Kit with Spindle

Helical Movement Adaptor
Some materials, such as creams, pastes and gels, do not flow easily, so standard spindles and testing methods cannot be used as they create a 'hole' in the material, generating invalid results. The helical movement adaptor moves smoothly up and down, automatically staying within pre-programmed limits, allowing the needle style spindle to cut into the material without making a 'hole' and making the measurement of viscosity possible.

The kit is supplied with the motor and 6 T-shaped spindles: PA, PB, PC, PD, PE, PF.

Part Number	Description
KT00230019705	Helical Movement Adaptor Kit with Spindle Set, UK 240V
KT00230019706	Helical Movement Adaptor Kit with Spindle Set, EUR 220V
KT00230019707	Helical Movement Adaptor Kit with Spindle Set, US 110V

Standard Calibration Oils
Silicone standard oils are used to check viscosity measurements. The values are given for 6 different temperatures between 20°C and 27°C (68°F and 80°F)

These oils are specifically manufactured for use with Elcometer 2300 Rotational Viscometers and values quoted are nominal at 25°C (77°F).

Krebs Viscometer

Featuring a unique automatic test mode, the Elcometer 2250 Krebs Viscometer measures the viscosity of paints, varnishes, adhesives, pastes and liquid inks at the touch of a button.

Fully automated Krebs test
- simply set up and press 'Start'

Choice of measurement:
Krebs Units (KU), Grams (g),
or Centipoise (cP)

Designed for use with either a 600ml beaker, 1 pint or ½ pint cans

Standard Krebs spindle with fixed spindle speed of 200rpm

Can be used with non-standard containers and sample volumes

User adjustable "Sample Waiting Time" and "Measuring Time"

Date and time stamp for each reading

Designed for use in accordance with National and International Standards - the Elcometer 2250 is ideal for both process control and quality assurance.

Viscosity - Rotational

Elcometer 2250

Krebs Viscometer

The Elcometer 2250 offers users both an automatic or manual Krebs viscosity test. The unit has a fixed spindle speed of 200rpm and displays the viscosity value on screen in Krebs Units (KU), Grams (g) or Centipoise (cP).

The Elcometer 2250 has two operating modes; 'Automatic' and 'Manual'.

- Automatic Mode:

  Automatic test - ensuring reliability and consistency of results - ideal for repeatable and reproducible testing.

  Once the sample beaker is positioned on the support, and the 'Start' button is pressed, the drive head automatically moves down until the spindle reaches the correct position within the sample.

  After a pause to let the sample settle, the Elcometer 2250 begins the test and displays the viscosity value. Once the test has been completed, the head automatically returns to the start position allowing the sample to be removed.

- Manual Mode:

  The Elcometer 2250 can also be used manually - ideal for measuring non-standard sample sizes.

Measuring viscosity of non-Newtonian fluids

The viscosity of non-Newtonian fluids is dependent upon temperature, shear rate and time. There are several different categories of non-Newtonian fluids and depending on how viscosity changes with time, the flow behaviour is characterised as:

Thixotropic - time thinning, i.e. viscosity decreases with time. Thixotropics - are gel-like substances at rest but liquid when agitated, eg: non-drip paints, ketchup and varieties of honey.

Rheopectic - time thickening, i.e. where viscosity increases with duration of stress, eg: some lubricants. Rheopectic liquids are very rare. Some liquids show time thinning behaviour due to breakdown of the structure. This phenomenon is sometimes known as Rheomaiaxis.

Depending on how viscosity changes with shear rate, the flow behaviour is characterised as

Pseudoplastics or shear thinning - where viscosity decreases with increased shear rate, eg: blood, gelatin and clay.

Dilatant or shear thickening - the viscosity increases with increased shear rate, eg: corn starch or concentrated sugar solution.

Plastic - exhibits a so-called yield value, i.e. a certain shear stress must be applied before a flow occurs

Newtonian fluids, (such as water, paints, etc.), which continue to flow at a given temperature regardless of the forces acting on it are typically measured using viscosity flow and dip cups

Viscosity - Fluidity & Flow Gauges

Elcometer 2280

Matthis Fluidometer

The Elcometer 2280 is a simple and easy-to-use instrument to measure the fluidity of a coating.

The coating to be measured is poured into the semi-spherical cavity of the instrument, which is in the horizontal position. The instrument is then lifted vertically allowing the liquid in the groove to flow under gravit , this is graduated in mm.

The distance flowed after approximately 10 seconds ± 0.5 seconds, measured with the sand timer provided, indicates the fluidity of the coating

Technical Specification

Part Number	Description
K0002280M001	Elcometer 2280 Matthis Fluidometer
K0002280N001	Elcometer 2280 Replacement Sand Bottle

Elcometer 2290

Daniel Flow Gauge

This simple gauge is used to assess the ability of thick or paste-like materials such as paints or printing inks to flo .

The product is poured into the semi-cylindrical reservoir. When the instrument is lifted vertically, the product runs on a graduated plate, which is fixed perpendicular to the reservoir.

The distance covered in a pre-determined time is the measure of the fluidit .

Film Application & Test Charts

For numerous products, such as paint, ink, varnishes, glue and cosmetics, the reliability of many laboratory tests is directly related to the quality and consistency of the samples.

Any measurements made on coatings for the purpose of describing their physical properties (drying time, elasticity, abrasion, gloss, colour, shade, etc.) are made on the basis of uniform and comparable samples with precisely controlled thickness.

In order to meet such specific demands, Elcometer has a wide range of high precision film applicators and spiral bar coaters.

Elcometer's range of Motorised Film Applicators has been designed specifically to ensure the greatest levels of repeatability and reproducibility by ensuring:
- constant speed of application
- smoothness of operation - ensuring no jerks which create ridges and variation in thickness

Available with a highly engineered table, available with or without a vacuum and heating element, each Elcometer Motorised Film Applicator is accurately measured using a Co-ordinate Measuring Machine to meet an incredibly high level of flatness.

The average variation on Elcometer Application Tables is 2.3µm (0.092mil), while the average variation on glass used on some low cost tables is 12.0µm (0.48mil).

If a 100µm (4mils) coating is tested, readings taken using an Elcometer table would produce readings between 97.7 (3.9mils) and 102.3µm (4.1mils). On glass, the readings produced would be between 88 (3.5mils) and 112µm (4.48mils) - a 47% variation.

Elcometer also offers a wide range of Leneta Test Charts to meet all specific requirements, which feature a combination of black and white markings. These are the two extremes of colour thereby indicating the thickness of coating required to cover the whole colour spectrum.

This range of Leneta Test Charts covers a variety of testing needs including the hiding power of coatings, ink qualities, penetration, spreading rates and opacity.

Film Application

Elcometer 4340

Motorised/Automatic Film Applicator

The Elcometer 4340 Motorised Film Applicator is the essential machine for preparing a wide variety of product samples including paint, varnish, cosmetics and glue.

11 pre-set transverse speeds from 0.2 - 3.9 inches per second

Standard table & perforated or channelled vacuum tables available

Electric or water heated sample tables available for temperature control
Adjustable travel carriage with 'auto stop' at end of travel

Precision engineered flat aluminium table for better repeatability - 5 times flatter than glas

Heavy base unit to minimise vibration and to produce high quality samples, without "Vibration ridges"

Ideal for testing liquids including: paint, varnish, cosmetics, glue

Can be used with a full range of Elcometer Film Applicators

MORE INFO ▶

Motorised/Automatic Film Applicator

Elcometer 4340

The Elcometer 4340 provides total consistency and reproducibility on various substrates including contrast charts, sheet steel, plastic foils and glass.
Interchangeable head attachments

Easily switched between film applicator

- Spiral Bar Head Attachment
- Standard Applicator Head Attachment
- Combined Spiral/Standard Head Attachment

Durable & Rugged

- Sturdy rigid design to eliminate vibration during film applicatio
- Up to 15 years of standard use
Choice of Bed

- Standard flat tabl
- Single and double channelled vacuum tables
- Perforated and heated vacuum tables

Smooth & multiple concurrent tests

- Use up to 3 film applicators simultaneousl
- Test up to 2 test charts simultaneously

Film Application

Elcometer 4340 — Motorised/Automatic Film Applicator

Film Applicator Attachment

Spiral Bar Attachment

Combined Film Applicator and Spiral Bar Attachment

A range of applicator head attachments is available separately, allowing the user to select the most appropriate for their specific use and Standard (if applicable)

The Elcometer 4340 range of Motorised Film Applicators comes as one universal base with user selectable head attachments - allowing the flexibility to test using standard film applicators (filmographs), spiral bar coaters or using the combined attachment of both the film applicator and spiral bar attachment.

ⓘ For a complete range of film applicators and spiral bar coaters etc

ⓘ Each table is engineered to the highest flatness rating (up to five times flatter than glass), and can be supplied in a number of variations to meet your specific test requirements, simply select the model from the Technical Specification belo .

Free Standing Vacuum Tables

Elcometer 4900

Elcometer 4900 free standing vacuum tables provide an ideal surface for manual application of films on test charts or samples. Made of perforated aluminium, the Elcometer 4900 keeps a wide range of test pieces absolutely flat (2.3µm variation over a 100mm length), including glass, plastic sheets, contrast charts etc. ideal for thicker, more substantial test pieces.

Elcometer vacuum tables are engineered to be flat and precise with little variation for "perfect" flatness. All Elcometer standard tables, channelled and perforated vacuum tables are 5 times flatter than glass

Perforated tables have two sample size settings, 210 x 297mm (8.3" x 11.7") and 297 x 420mm (11.7" x 16.6"), selected by means of a switch on the table.

Film Application

Elcometer 4361

Spiral Bar Coaters

Made of stainless steel and consisting of a cylindrical bar wound with stainless steel wire, these spiral bar coaters are used to apply a predetermined thickness for coatings with high levelling characteristics.

- A wide range of different wire diameters to measure coating thicknesses from 4 to 500μm (0.157 to 19.685mils).

- 2 standard bar widths are available,140mm (5.5") or 250mm (9.8"), allowing the user to apply the correct film width dependent on the substrate or test chart width. Other widths are available on request.

Ideal for use with the Elcometer 4340 Motorised Film Applicators.

A range of standard and heated vacuum tables are available.

STANDARDS:
ASTM D 4147

elcometer

Spiral Bar Coaters

Elcometer 4360

Made of stainless steel and consisting of a cylindrical bar wound with stainless steel wire, these spiral bar coaters are used to apply a predetermined thickness for coatings with high levelling characteristics.

- A wide range of different wire diameters to measure coating thicknesses from 4 to 500µm (0.157 to 19.685mils).

- 2 standard bar widths are available,140mm (5.5") or 250mm (9.8"), allowing the user to apply the correct film width dependent on the substrate or test chart width. Other widths are available on request.

_i_ Ideal for use with the Elcometer 4340 Motorised Film Applicators.

_i_ A range of standard and heated vacuum tables are available.

STANDARDS:
ASTM D 4147

Film Application

Elcometer 3520

Baker Film Applicator

The Elcometer 3520 Baker Film Applicator is made of hardened stainless steel with a cylindrical applicator body. These gauges apply a coating of specified thickness and film width on flat, relatively firm substrat

i It can also be used with the Elcometer 4340 Motorised Film Applicators.

Each Elcometer 3520 Baker Film Applicator has four high precision specified coating thickness sizes for accuracy and is available in a range of film widths

STANDARDS:
ASTM D 823-E

Adjustable Baker Film Applicators

Elcometer 3525 & 3530

The Elcometer 3525 & 3530 are manufactured using the very latest machining techniques to ensure outstanding accuracy. These Baker Film Applicators allow the user to select the specific gap size required. The coating thickness gap size can be set to produce either a uniform film or a film wedge. Each film applicator has thickness markings down each side for fast set up.

Available in two gap size ranges and a number of film widths, these stainless steel applicators can be used manually or with the Elcometer 4340 Motorised Film Applicator.

Leneta Test Charts

Elcometer 4695

Elcometer supplies a wide range of Leneta Test Charts, from plain white to those having different patterns of black and white. Made from naturally bright, non-flourescent white paper, these charts contain no optical brighteners that can affect instrumental colour measurements

Leneta Test Charts are the market standard in today's coatings industry.

Foil Card substrates of steel, aluminium, glass and plastic are also available.

Leneta Test Charts are available in boxes & cases.

STANDARDS:

AS/NZS 1580.213.1, ASTM D 344, ASTM D 2805, ASTM D 2486, ASTM D 5150, ASTM D 6441, BS 3900-D4, DIN 53162-2, FTMS 141 4121, ISO 2814

Opacity Charts

Elcometer 4695

The term "Opacity Chart" refers to charts on which the test pattern is a simple combination of black and white areas, large enough for wider aperture reflectance instruments, as well as for visual opacity and colour observations.

Used to test the hiding power of the coating, using large black and white areas.

Test Charts

Elcometer 4695

Brushout Cards

Designed for informal brushout applications, thicker paper is used for the testing of coatings applied with a brush or roller.

The paper stock is almost twice the thickness of regular chart paper to give greater rigidity for more convenient handling - nominal thickness 0.5mm (20 mils).

Brushout Cards are also used widely for drawdowns and colorimetric measurements.

elcometer

Display Charts/Spreading Rate

Elcometer 4695

These charts employ time-tested, diagonally striped patterns, having a strong visual impact that emphasises variations in film opacity. They are frequently used for hiding power display purposes, by means of drawdowns or brushouts.

Spreading Rate Charts (Form 8H) are accurately 0.1 square metres (approximately one square foot) in area, and are used in brushout hiding tests at specified spreading rates as described in ASTM Method D 344.

Checkerboard Charts

Elcometer 4695

One of the earliest hiding power test surfaces was linoleum with a black and white checkerboard pattern, this was soon replaced by sealed paperboard charts.

Checkerboard Rate Charts are typically used in drawdown hiding tests.

Spray Monitors - Self Adhesive Hiding Power

Elcometer 4695

These are pressure sensitive labels with a hiding power test pattern and a sealed, solvent-resistant surface. They are used primarily with metal panels on which the panel alone provides no visual clue as to the thickness of the applied paint film

When placed on such a surface the Monitor presents a contrasting feature by which to observe how well the coating hides the surface, thereby facilitating film thickness control. It adheres firmly whether air-dried or baked, to present a permanent visual record of film opacit .

Drying Time
When developing a coating process, it is important to know the exact time it takes for the coating to dry or cure. For multicoat paint systems, having knowledge of the drying time enables the operator to know when any subsequent layers can be applied.

There are many stages involved in the coating drying time. Once a coating has been applied, it levels off under gravity, and, as the coating begins to cure, a thin dry film appears on the surface. The coating then continues to dry until, finall , it is totally cured.

Permeability: Describes how much and how fast moisture transfers through a film as vapour. The film is gripped between a ring fitted with a seal and the cup, which contains a quantity of water or desiccant.

Permeability Cups: When applying a multicoat system, it is often acceptable to apply a subsequent coat before the previous coat has fully cured. Payne Permeability Cups can be used to determine the degree to which the volatile liquid can permeate any subsequent layer.

Drying Time

Elcometer 5300

Linear Drying Time Recorder

The Elcometer 5300 is designed to determine paint drying time by linear recording, with up to 10 positions (5 each side of the centre column) tested simultaneously.

Ten rods with hemispherical tips, fitted to a carriage, are brought into contact with the fresh films at one end of the test piece and moved lengthwise

The drying time is calculated from the distance travelled, measured using a graduated rule along the edge, corresponding to the various stages observed on the trace.

The coatings are applied beforehand on glass strips 25mm (0.98") wide and 700mm (27.5") long. Using the Elcometer 3505 Cube Film Applicators, it is possible to apply up to five coatings simultaneously on a glass plate.

- The drying time recorder automatically stops at the end of travel
- The load on each ball is 11g (0.37oz), although additional weights can bring this load up to 21g (0.71oz)

How to use a linear drying time recorder

1 Levelling	2 Basic Trace	3 Ripped Film	4 Surface Trace	5 Dry
A Linear Drying Time Recorder calculates the drying time using the principle that

Distance = Speed x Time

A ball tip is placed into the coating being tested and the drying time recorder begins to move the ball at a predefined speed. As the coating dries, the visual trace left in the coating by the ball identifies each stage of the cure

Drying Time

Payne Permeability Cups

The Elcometer 5100 Payne Permeability Cups are made of anodised aluminium and are used to determine the permeability of films of paints, varnish, plastic, cellophane, etc.

The water evaporates or is absorbed and, after a certain time, the weight change relative to the film thickness is calculated, indicating the degree of permeability or permeance.

How to use Payne Permeability Cups

Prepare the film to be tested using a film applicator and suitable test chart.

Disassemble the permeability cup.

Fill with required liquid (typically water) or dry desiccant (absorbent).

Place the film on to the cup and reassemble making sure the gasket is fitted firs

Weigh the prepared permeability cup and record the result (in grams).

Leave for appropriate time, re-weigh, calculate the change in mass (Δm) & water vapour transmission rate.

elcometer

Improved mechanical resistance to wear is a key requirement of a wide range of products. From coatings to clothing, leather to upholstery, keypads to plastic toys, a product's ability to resist wear is an important characteristic.

There are testing methods relating to the 'abrasion by friction' concept. Others are based on the projection of abrasive particles on to the test specimen. These techniques provide valuable information about materials and processes.

These mechanical tests can make an accurate comparison between samples and can be used to determine lifetime wear.

Definitions

Abrasion: The ability of a coating to resist damage caused by a defined material rubbing its surface. Abrasive wear is the erosion of material from a solid surface by the action of another solid.

Washability: The ability of a coating to withstand being washed using either wet or dry scrubbing action. The effect can be determined in terms of coating weight loss, loss of gloss or loss of thickness after the scrubbing process.

Washability & Abrasion

Elcometer 1720

Washability & Abrasion Testers

These robust, reliable and extremely versatile machines have been designed for testing the washability, brushability and resistance of a wide range of materials including paint, lacquers, inks, coatings, leather, wood, plastics, printed material, fabrics etc.

Test up to 4 samples simultaneously

User adjustable stroke length from 10 to 300mm (0.4 to 11.8")

Rapid tool change

Multi-lingual digital display

All stations can be tested wet or dry

Available with or without an integrated liquid dosing pump

The durable and robust design is stable under test allowing repeatable results, even at the fastest stroke speeds

Speed Cycles can be adjusted from 10 to 65 cycles per minute or set to the ISO Standard of 37 cycles/min

Wide range of tools available, for testing flat and curved samples

MORE INFO ▶

Washability & Abrasion Testers

Elcometer 1720
Meeting Standards

- With the wide range of tools available many Standards can be tested in one unit
- All units can be used in accordance with ASTM, DIN, EN and ISO Standards
- Easily adjustable to customers unique applications using the special tools
- Washability and abrasion testing on flat and curved samples up to 13mm (0.51") thick

Interchangeable Tools

- All tools are interchangeable with the rapid tool change system, making the unit ideal for use in accordance with a wide range of Standards

For the complete range of tools.   MORE INFO ▶

User Adjustable

- Stroke length can be quickly and easily changed by the user to meet their specific requirements between 10 - 300mm (0.4 - 1.8")
- Speed of carriage can be adjusted between 10 and 65 cycles per minute
- Cycle counter can be pre-set for a defined number of cycles from 1 - 32,76
Wet and Dry

- All stations can be tested wet or dry
- Versions are available with or without an internal liquid pump
- Samples can be tested under wet or dry conditions
Economic

- With the ability to test up to 4 different characteristics simultaneousl , significant time can be save
- With its rapid tool change system setting up tests is fast and easy
- Easy sample placement allows quick change between tests

Washability & Abrasion

Elcometer 1720 — Washability & Abrasion Testers

Available in 2 versions:
2 station - undertakes two tests at a time.
4 station - tests up to four samples with 4 different tests

Stroke speed can be varied between 10 and 65 cycles/min or set to 37 cycles/min to meet ISO Standards.

Stroke length can be adjusted by the user to meet specific requirements, from 10 to 300mm (0.4 to 11.8").

Available with or without liquid dosers, allowing test liquids to be regulated automatically or independently.

Digital display allows easy, accurate speed variation and simple reporting.

The rapid tool change system allows the user to test the samples in accordance with a wide range of National and International Standards on both flat and curved samples simultaneously.

Washability & Abrasion Testers

Elcometer 1720

The Elcometer 1720 can undertake tests according to a wide range of different Standards and Test Methods by simply changing the abrasive tools. Please select the required tools from the list on the following two pages. Samples can be tested in a combination of both wet and dry methods.

Tool 1: Wild Boar Brush

Wild boar hair brush and stainless steel brush holder.
Total weight: 250g (8.82oz)

Part Number: KT001720P003

STANDARDS:
DIN 53778-2:1983

Tool 2: Nylon Brush

Nylon bristle brush, stainless steel brush holder and 177g (6.2oz) mass.
Total weight: 454g (16.01oz)

Part Number: KT001720P030

STANDARDS:
ASTM D2486

Tool 3: Sponge

Sponge and stainless steel brush holder, 337g (11.9oz).
Total weight: 508g (17.92oz)

Part Number: KT001720P005

STANDARDS:
ASTM D4213:92, ASTM D4828

Tool 4: Sponge

Sponge and stainless steel brush holder, 337g (11.9oz) and 250g (8.8oz) mass to bring gross weight to 750g.
Total weight: 750g (26.45oz)

Part Number: KT001720P073

STANDARDS:
ASTM D3450

Tool 5: Sponge / Abrasive

Sponge & stainless steel holder abrasive pads - top and bottom & 76g (2.7oz) mass.
Total Weight: 232g (8.12oz)

Part Number: KT001720P029

STANDARDS:
ASTM D4213

Tool 6: Abrasive

Aluminium holder, abrasive pads (x5).
Total weight: 135g (4.76oz)

Part Number: KT001720P036

STANDARDS:
ISO 11998

Tool 7: Universal Material Clamp

Stainless steel holder allowing users to fix their own test sample or abrasive material. Ideal for abrasion and wear of labels, textiles, ink etc.

Part Number: KT001720P207

Tool 8: Linear Abrader "Crockmeter"

This tool is ideal for testing abrasion on both curved and flat surfaces and for testing colour fastness of fabrics. Supplied with a removable stainless steel rod, test felt, textile fixing ring and a set of additional masses - 2x100g (3.5oz), 1x200g (7oz), 1x500g (17.6oz). Total weight (excluding masses): 200g (7oz)

Part Number: KT001720P074

STANDARDS:
ASTM F1319, ISO 105-X12, PSA D45 1010

For more information on Standards.

Washability & Abrasion

Elcometer 1720   Washability & Abrasion Testers

Tool 9: Linear Abrader

For testing the resistance to abrasion of automotive components, includes a felt disc of 10mm (0.4") diameter and 10mm (0.4") thick working under a mass of 400g (14.1oz).
Total weight: 400g (14.11oz)

Part Number: KT001720P075

STANDARDS:
GME 60269

Tool 9A: Linear Abrader

As Tool 9 but with 16mm (0.63") diameter felt wool disc.
Total weight: 820g (28.9oz)

Part Number: KT001720P075-1

Tool 9B: Linear Abrader

Felt holder for 16mm (0.63") diameter felt wool disc working under a mass of 900g (31.7oz)
Total weight: 900g (31.74oz)

Part Number: KT001720P075-2

STANDARDS:
EN 13523-11, ECCA T11

Tool 10: Curved Sample Tool

Height adjustable with an elbow joint for curved samples, this tool is ideal for testing abrasion resistance of both coatings and inks. Supplied with felt disc, rod for masses, 1x50g (1.75oz), 1x100g (3.5oz), 2x200g (7oz) and 2x500g (17.5oz) mass

Part Number: KT001720N003

STANDARDS:
EN 60730-1-A

Scrub Test Panels

Elcometer 4695

In a typical scrub test, the coating is applied to the Leneta Scrub Test Panel at a specified film thickness, allowed to dry and then subjected to scrubbing with a straight-line scrub tester.

When used in accordance with ASTM D2486, Method A, a 10mil shim is inserted under the panel to accelerate failure and thereby reduce testing time. The scrub resistance is the number of scrub cycles required to remove the coating to a specified end point

Alternatively, the loss in weight is determined after a specified number of scrub resistance cycles, with calculation of equivalent loss in film thickness

These Scrub Test Panels are ideal for use with the Elcometer 1720 Washability & Abrasion Testers.

Form P121-10N

Washability & Abrasion

Elcometer 5750

Taber® Linear Abrasers

Whatever your product, be it curved, round, big or small, the Linear Abraser from Taber® can test it all. Using a free floating head to follow the contours of the sample, the Taber® 5750 is the ideal abrasion tester for flat or curved surfaces. It may also be used as a scratch tool, using the scratch kit accessory.

Abrasion media, length of stroke, load and speed of stroke can all be user defined to meet specific requirements.

The Linear Abraser uses a range of Wearasers™. The size and shape of a pencil eraser, the Wearaser™ uses the same high quality Taber® abrasive media as used on the Taber® Rotary Abrasers, simulating real-life wear conditions.

Features:
- Stroke lengths of 12.7, 25, 76 and 102mm (0.5, 1.0, 3.0 and 4.0")
- Variable stroke speed from 2 - 75 cycles per minute
- Preset stroke speed buttons for 2, 15, 25, 30, 40 and 60 cycles per minute
- Variable load from 350 - 2100g (12.4 - 74.1oz) with optional weights
- Stainless steel Wearaser™ holder (Collet) for use with vitrified or resilien Wearasers™
- Laser alignment guide

STANDARDS:

AATCC Method 8, ASTM D 2197, ASTM D 5178, ASTM D 6279, ASTM F1319, ISO 105-X12, JIS L 0849

Taber® Rotary Abrasers

Elcometer 5135 & 5155

Used primarily in the testing of ceramics, plastics, textiles, metals, leather, rubber and painted, lacquered and electroplated surfaces, accelerated wear test procedures have also been written into many test specifications including ASTM, ISO, TAPPI and DIN - as well as automotive manufacturing procedures around the world.

The Taber® Rotary Abraser is an industry standard used in the wear and durability testing and is available with either a single test head or dual testing heads, which allows the user to test two different or identical materials simultaneousl .

Choose from a wide variety of abrading wheels and abraser accessories to simulate real-life wear conditions.

Features :
- Platform speeds 60 and 72rpm
- Balanced, calibrated arms and wheel mounts
- Vacuum system with precision height adjustment
- Sealed aluminium housing with membrane control panel and digital display

Washability & Abrasion

Elcometer 5135 & 5155   Abrading Wheels

Taber® Abrading Wheels are available in five levels of abrasiveness to suit a wide range of material testing applications.

Wool, felt or plain rubber wheels test delicate materials or abrasiveness of materials such as dental powders.

Wheels featuring abrasive particles in a resilient matrix of rubber or a hard matrix of vitrified clay are suitable for stiffer material

- *Calibrase®* : resilient abrasive wheel - rubber and aluminium oxide
- *Calibrade®*: a non-resilient abrasive wheel - vitrified clay a d silicon carbide
- *Plain Rubber*: contains no abrasive particles unless used with sandpaper strips
- *Tungsten Carbide*: severe cutting and tearing action with helical teeth for use on resilient materials such as rubber, leather and floor covering

Taber® Rotary

Elcometer 5135 & 5155

Accessories

Multi-Media Attachment

This attachment is used to recreate contact surface wear caused by liquids, fluids and powders. Measures the abrasivity of materials including paints, pigments, adhesives, sealants, pastes, additives etc.

If you require either the Elcometer Taber® 5135 or Taber® 5155 ready assembled with the Multi-Media Attachment, please contact Elcometer.

Part Number: ST985500

Sample Cutter

The Model 5000 Sample Cutter will cut a precise 106mm (4.2") circular sample with a 6.35mm (0.25") centre hole to prepare your specimens for use with the Elcometer Taber® Abrasers.

An easy counter-clockwise cutting motion allows you to cut a variety of materials. Optional pads, which allow cutting thicknesses of 0.03mm (0.001") to 6.35mm (0.25"), are also available.

Part Number: ST985000

Grit Feeder Attachment

Provides a unique method to evaluate 3-body abrasion resistance on a variety of materials. Aluminium oxide grit particles are evenly distributed on to the specimen wear path and pass under a pair of leather wheels. This loose grit acts as an abradant aiding the action that contributes to the physical breakdown of materials.

The Abraser Vacuum is attached to the grit feeder and continuously removes both abraded material and used grit.

The Grit distributor and vacuum removal nozzle heights are adjusted using a thumbscrew.

Two versions are available, Model 155 and Model 255. The Model 155 uses an alignment guide screw to set the position of the instrument. The model 255 has an alignment block incoporated into the base to ensure the correct location of the grit feeder in relation to the Abraser.

Both models are supplied complete with:

• S-39 Leather wheel set
• S-38 Standardisation Plates
• S-41 #240 Aluminium oxide
• Alignment guide and mounting hardware

Part Number: ST980503-1	Model 155
Part Number: ST980503-2	Model 255

Washability & Abrasion

Elcometer 5135 & 5155   Taber® Rotary Abrasers

Quiet Cabinet

Comprising an upper and lower unit, this solid wood cabinet is suitable for use in a laboratory environment and achieves an approximate 20% reduction in operating sound level.

The top cabinet provides a convenient, dust-free work space for the Abraser and features a Plexiglas® viewing window to monitor testing and a removable front for easy transfer of the Abraser in and out of the cabinet.

The base cabinet holds the Abraser Vacuum Unit and includes an inbuilt exhaust system for effective air circulation

Both cabinets offer ample room to store test specimens, supplies and accessories. The Quiet Cabinet can be purchased as a complete unit or the top and base separately. The lower cabinet exhaust system is available for 230V/50Hz or 115V/60Hz.

Technical Specification

Part Number	Description
ST129497	Complete 230V - both upper and base cabinets
ST128372	Complete 115V - both upper and base cabinets
ST129498	Base unit only 230V - includes vacuum unit
ST128371	Base unit only 115V - includes vacuum unit
ST128370	Upper unit only - work space and viewing window

Calibration Verification Ki

A cost effective method that enables users to verify that an instrument is in calibration, or requires attention. Each kit is individually calibrated providing a reliable check system.

Kit allows you to verify:
- Longitudinal alignment of abraser arm
- Transverse alignment of abraser arm
- Wheel tracking and wear pattern
- Bearing integrity (tracking pattern compliance)
- Vacuum nozzle orifice siz
- Minimum vacuum nozzle suction force
- S-30 Weartrac precision wheels (x1 set)

Supplied complete with:
- S-45 Wheel tracking cards (x15)
- Vacuum nozzle suction and orifice gaug
- Vacuum nozzle O-ring
- Dual unit vacuum plug
- Taber® Abraser clean-up hose

Hardness & Scratch Resistance

Hardness can be defined as a material's resistance to permanent deformation. In the coatings industry, hardness measurement can be used to determine the resistance of the coating to scratching from general wear and tear and also if a coating is fully cured.

Hardness: Hardness can be defined as a material's resistance to permanent deformation.

The term "Hardness" is used to refer to different properties of material, specifically

• Resistance to scratch and wear
• Resistance to penetration/indentation

Depending on the requirements, there are various methods for testing hardness. Some are dedicated to characterise coatings and others are more suitable for testing bulk materials such as metals, plastics, rubber or elastomers.

Scratch Resistance:
To assess a coating's resistance to scratch there are a number of different instruments that can be used

• Pencil Hardness Tester (Wolff-Wilborn
• Sclerometer
• Clemen Apparatus
• Scratching and Shearing Instrument

Resistance to Indentation:
There are many instruments available to assess the resistance to penetration. For coatings in particular, there are three common methods where the depth of penetration of a weighted tool is used to show the coating's resistance to penetration:

• Buchholz
• Barcol
• Shore

Hardness & Scratch Resistance

Elcometer 3080

STANDARDS:
ASTM D 3363, ECCA T4,
EN 13523-4, ISO 15184:2012,
JIS K 5600-5-4

Pencil Hardness Tester

This is a simple and effective technique to evaluate the hardness of many coatings.

The pencil lead, prepared beforehand by using the special pencil sharpener and rubbing it on fine abrasive paper (400 grade), is maintained at an angle of 45° and pushed with uniform pressure on to the sample, leaving either a superficial trace or causing destruction down to the substrate.

The Elcometer 3080 Pencil Hardness Tester is supplied complete with stand and a series of 14 pencils, ranging from 6B to 6H hardness values.

Technical Specification

Part Number	Description
K0003080M003	Elcometer 3080 6B to 6H Pencil Hardness Tester with Stand

Pencil Hardness Tester

The pencil hardness test, also referred to as the Wolff-Wilborn test, uses the varying hardness values of graphite pencils to evaluate a coating's hardness.

The Elcometer 501 has been designed to ensure that the cylindrical pencil lead is maintained at a constant angle of 45° and exerts a force of 7.5N (1.68lbF).

The pencil lead, prepared beforehand using the special sharpener and abrasive paper, is inserted into the Elcometer 501 and pushed over the smooth, flat coated surface. The lowest hardness value of the pencil which marks the coating determines the coating's hardness rating.

Hardness & Scratch Resistance

Elcometer 3086

Motorised Pencil Hardness Tester

Traditional pencil hardness testers can be limited in their reproducibility and repeatability by two key factors; the uniformity of the carriage speed and the variation of the applied force by the user as the manual tester is moved across the coating.

The Elcometer 3086 Motorised Pencil Hardness Tester, using the same test methods and principles as the Elcometer 501 pencil hardness tester, removes both of these variables by being fully independent. The internal motor drives the unit at a constant, uniform speed across the coated surface, exerting a fixed, user determined force between 0 - 10N (0 - 2.25lbF)

Using the pencil lead holder, pencil leads of varying hardness values can be quickly interchanged to determine a coating's hardness rating.

Manufactured from anodised aluminium, the Elcometer 3086 can travel forwards (chip method) or backwards (indentation method), as required.

STANDARDS:
ASTM D 3363, ECCA T4,
EN 13523-4, ISO 15184:2012,

elcometer®

Sclerometer Hardness Tester

Elcometer 3092

The Elcometer 3092 tests the hardness of a coating by moving a Tungsten Carbide Tip over the coating with predetermined force.

The body of the instrument contains a cursor fitted with a screw lock and a round tip, compressed by one of the four springs corresponding to the four printed scales:

- *Grey spring:*   0-3N (0.671lbF)
- *Red spring:*   0-10N (2.248lbF)
- *Blue spring:*   0-20N (4.49lbF)
- *Green spring:*   0-30N (6.74lbF)

The spring force can be set by the "collar"; compressing the spring increases the force with which the tip is pushed on to the surface of the test piece. By making short, straight movements while gradually increasing the load, the user can observe the force at which the tip leaves a mark or destroys the coating.

Each Elcometer 3092 is supplied in a case with a 0.75mm (0.03") diameter tungsten carbide tip and 3 springs (grey, red and blue). An optional green spring of 0 - 30N is also available.
STANDARDS:
AS 3894.4, EN 438-2, ISO 4586-2

Hardness & Scratch Resistance

Elcometer 3000

Motorised Clemen Unit

The Elcometer 3000 Motorised Clemen Unit is a robust and accurate instrument for evaluating the resistance to scratching of a coated surface. The sample can be metal, wood, glass, plastic or other hard materials.

A tool is fitted with an hemispherical tip of 1mm (0.04") diameter (standard), lowered gradually on to the sample surface which is then pulled linearly 60mm (2.36").

As the sample is pulled the tool lowers automatically on to the sample, moves along the sample and gently rises up at the end of the stroke.

To ensure consistent, repeatable and reproduceable tests, the Motorised Clemen Unit automatically brings the tool gently in contact with the sample, moves across the coating and then lifts it with the automatic Start/Stop function. Depending on the load applied, varying degrees of penetration of the tool into the coating are observed - from a superficial trace to total destruction.

If the coating is completely removed during the test, the contact of the tool with the metallic substrate is indicated by a lamp and voltmeter indicator.

Elcometer offer a range of cutting tools, please see Accessories below.

Manual Clemen Unit

Elcometer 3000

The Elcometer 3000 Manual Clemen Unit is a robust and simple to use instrument for evaluating the resistance to scratching of a coated surface.

A tool is fitted with an hemispherical tip of 1mm (0.04") diameter (standard), lowered gradually on to the sample surface which is then pulled linearly 60mm (2.36").

Depending on the load applied, varying degrees of penetration of the tool into the coating are observed - from a superficial trace to total destruction
STANDARDS:
AS/NZS 1580.403.1, BS 3900-E2, DIN 53799, ECCA T12, EN 13523-12, ISO 1518-1:2011, JIS K 5600-5-5

Hardness & Scratch Resistance

Elcometer 3025

Scratch/Shear Tester

The Elcometer 3025 is a motorised device to test the resistance of many materials to scratching, shearing, gouging, marring, scraping and engraving. This portable instrument tests materials up to 12.7mm (½") thick by 101mm (4") square or round.

The height of the scale beam is adjusted by the user to match the thickness of the sample. The tool, a conical diamond tip, is then placed on the sample and the instrument is activated by the user with the On/Off switch

The tip leaves a trace mark and the extent of this, in relation to the load used, indicates the degree of coating or material hardness. The turntable rotates at a constant 5rpm to ensure repeatability and reproducibility of tests. By changing the load on the tool, from 0 - 1000g (0 - 2.2lb), the sample's scratch resistance can be evaluated.
Sample Cutter

The Sample Cutter cuts precise 106mm (4.2") circular samples with a 6.35mm (0.25") centre hole to prepare specimens for use with the Taber® Abrasers.

An easy counter-clockwise cutting motion allows the user to cut a variety of materials. Optional pads allowing cutting thicknesses of 0.03mm (0.001"), 4.74mm (0.187") and 6.35mm (0.25") are available.

Buchholz Hardness Tester

Elcometer 3095

Measuring a coating's hardness using the indentation method, the Elcometer 3095 Buchholz Hardness Tester consists of a bevelled disc indenting tool which is fitted into a stainless steel block exerting a constant test load of 500g (17.6oz).

The gauge is placed on to the coating and then removed after 30 seconds. The length of any subsequent indentation in the coating is measured using the graduated microscope.

The result is expressed as units of Buchholz Indentation Resistance using the scale provided.

Hardness & Scratch Resistance

Elcometer 3101 — Barcol Impressor Hardness Tester

These easy to use hardness testers are ideal for testing the hardness of soft metals, plastics, glass fibre and leathe .

Making sure the indenter point is perpendicular to the surface being tested, the instrument is placed on to the sample and a light pressure is exerted against the instrument driving the spring-loaded indenter point into the material. The hardness reading is instantly indicated on the dial.

There are three models in the range:

Elcometer 3101/1   Model 934-1: for soft metals such as aluminium and its alloys, brass, copper, and some of the harder plastics and glass fibre. This unit meets ASTM Standard D2583.
Elcometer 3101/2   Model 935: for softer plastics and very soft metals.
Elcometer 3101/3   Model 936: for extremely soft materials such as lead, linoleum and leather.

To ensure the Barcol Hardness Tester is in calibration, a number of Standard Test Discs are available. Please select the appropriate Test Disc from the list of Accessories below to supplement the disc supplied.

All results are recorded in Barcol Units (BU).

elcometer®

Shore Durometer

Elcometer 3120

The Elcometer 3120 range of durometers is widely used to test the hardness of soft materials. A round point indents the material under a fixed force spring and the hardness is displayed on the dial in Shore Hardness Units.

The instrument can be used either hand-held or fitted to an optional stand for increased repeatability.

Note: The Elcometer 3120 range of Shore Durometers encompasses a number of hardness values. Please refer to the table below.

Hardness & Scratch Resistance

Elcometer 1537

ISO Scratching Tool

The Elcometer 1537 ISO Scratching Tool is a simple but effective instrument which is used to scratch the surface of samples in preparation for adhesion, salt spray and corrosion tests. The tool is held horizontally and pulled across the sample to produce the scratch.

The Elcometer 1537 has a tungsten carbide blade which is set to give a 90° cutting angle with a 75° cutting edge.

Certificate of Conformity available upon request

Elasticity & Deformation

The performance of coatings when influenced by external stresses caused by stretching, bending or impact, determines their suitability for their designed application.

A coating designed for use in the coil coating industry, for example, should have the ability to stretch as the substrate is formed into its desired shape without damage.

Deformation or damage can reduce the protective quality and appearance of the coating including colour change, adhesion, gloss, etc.

A coating designed for industrial use should be able to withstand an acceptable level of impact during the life of the product.

In order to characterise a coating's performance to elongation and deformation, a number of repeatable and reproducible tests have been developed.

Cylindrical & Conical Mandrel Bend Test: A coated metal sheet is bent over a conical or cylindrical mandrel and any subsequent cracks, colour change, adhesion etc. of the coating are evaluated. Corresponding results, produced by decreasing mandrel sizes, indicate the degree of elasticity of the coating.

A conical mandrel allows the user to perform fewer tests to achieve a similar result to cylindrical mandrels.

Cupping Test: A coated metal sheet is subjected to a gradual deformation by a polished die being pushed from beneath the coating i.e. from the reverse side of the sheet.

Variable Impact Tests: There are two methods: either a weight with a punch attached falls on a coated metal sheet or a weight falls on to a punch which is resting on the coated metal sheet. In either test, the damage caused is observed and evaluated. These methods are used to identify how the coating performs under a rapid deformation process.

Elasticity & Deformation

Elcometer 1500

Cylindrical Mandrel on a Stand

The Elcometer 1500 is a simple instrument for determining the elasticity, adhesion and cracking of dry paint on flat specimens, consisting of a mandrel support which also serves as a test stand.

Coated metal sheets, maximum 150mm (5.9") in length x 100mm (3.93") wide, are manually and successively bent around mandrels of decreasing diameter until cracks appear.
STANDARDS:
AS/NZS 1580.402.1, ASTM D 522-B, ASTM D 1737, BS 3900-E1, DIN 53152, ISO 1519-1, JIS K 5600-5-1 NF T30-040

How to use the Cylindrical Mandrel on a Stand

Technical Specification

Part Number	Description
K0001500M002	Elcometer 1500/2 Metric Set of 13 Cylindrical Mandrels on a stand from 2 to 32mm
K0US1500M001	Elcometer 1500/1 Imperial Set of 7 Mandrels from ⅛" to 1"
Mandrel Size	Metric Version: 2, 3, 4, 5, 6, 8, 10, 12, 13, 16, 20, 25, and 32mm
	Imperial Version: ⅛, ¼, ⅜, ½, ⅝, ¾, 1"
Dimensions	178 x 138 x 145mm (7 x 5.3 x 5.7")
Weight	3.3kg (7.26lb)
Packing List	Set of 7 mandrels (Elcometer 1500/1), Set of 13 mandrels (Elcometer 1500/2) and operating instructions

How to use a Cylindrical Mandrel Bend Tester
Insert large diameter mandrel followed by the coated test panel, making sure that the painted area faces away from the mandrel.

Tighten the vice by rotating the vice handle.
With a smooth action pull the lever around the mandrel. Check coating for damage.

Repeat as necessary with smaller diameter mandrels.

elcometer

Cylindrical Mandrel Bend Tester

Elcometer 1506

The Elcometer 1506 is similar in use to the Elcometer 1510, being a very robust mechanical unit for determining the elasticity, adhesion and elongation properties of cured coatings on sheet metal.

The frame has a bending lever with height-adjustable rollers and a sliding vice for clamping the sample which means the test pieces are bent perfectly and regularly on decreasing mandrels until the desired effect can be observed

The instrument can be adjusted to the diameter of the mandrel used as the mandrels are easily changed.

A wide range of metric and imperial mandrels are available. Mandrel sets or individual mandrels should be ordered separately - please see accessories below.

Elasticity & Deformation

Elcometer 1510

Conical Mandrel Bend Tester

The Elcometer 1510 Bend Tester is a mechanical tester used to determine the effects of bending on the elasticity, adhesion and elongation properties of cured coatings on sheet metal.

The frame has a bending lever with a roller which pivots on a steel conical mandrel with a diameter from 3.2 - 38.1mm (0.12 - 1.5"). A graduation indicates the mandrel diameter in both mm and inches.

The specimen can be bent on part of, or along, the entire length of the mandrel, and the results (cracks) corresponding to different test diameters can be observed in a single operation. This is ideal for use in conjunction with the cylindrical mandrel, as it identifies the stop point for more focused testing

As the instrument is machined out of a solid block of steel, the particularly robust and rigid construction provides excellent resistance to wear and provides long service life. A large, sturdy anodised base, which can be permanently fixed to a workstation, ensures stability during testing.

STANDARDS:
ASTM D 522-A, BS 3900-E11, ISO 6860

elcometer

Cupping Tester

This robust and user-friendly tester is used for assessing the cupping ability of coatings applied to metal sheets up to 1.2mm (0.05") thick.

The Elcometer 1620 has a 27mm (1.06") diameter hardened steel die in a clamping device and a 20mm (0.79") diameter punch. A hand-rotated crank and reduction drive moves the punch progressively into the sample.

The Elcometer 1620 has a digital gauge with an illuminated magnifier to accurately view the resultant damage and provides accurate readings of the cupping depth on an integrated gauge. Direct viewing of the fissures, cracks and tears in the coating of up to 10μm (0.4mil) can be viewed through the supplied x10 illuminated magnifying glass.

STANDARDS:
BS 3900 E4, DIN 53156, DIN 53232, ECCA T6, EN 13523-6, ISO 1520, JIS K 5600-5-2, NBN T22-104, NF T30-019

Elasticity & Deformation

Elcometer 1615   Variable Impact Tester

This simple to use gauge is ideal for evaluating the resistance of a coating to impact (elongation, cracking or peeling), and is suitable for use on both direct and indirect test methods.

Direct: either a weight with a hemispherical punch attached falls on to a coated metal sheet.

Indirect: a weight falls on to a hemispherical punch which is resting on the coated metal sheet.

The Elcometer 1615 Impact Tester comes as one universal assembly with the option of seven different kits providing the functionality for various testing methods.

i   The base unit is common to all tests. Simply select the appropriate kit to meet your requirements.

The test specimen is fixed into position by the quick release clamp. The weight is lifted to the predetermined height and can be set by the adjustable collar device. The weight is then released and the resulting deformation is observed.

Tube height 1000mm (39")

Fast and safe weight release mechanism

Graduated tube engraved in both kg-cm & lb-inch (1m, 39" height) metric and imperial units

Integrated bubble level to ensure the tester is perpendicular for repeatable accurate results

Stop collar with 10 settings between 2mm and 15mm (0.08 and 0.60") to change the depth of impact when working in accordance with ISO Standards, supplied with Kits A, D and F

Magnifier x1

Heavy-duty, passivated base plate and anodised arm to prevent rusting

Rapid fix sample clamp; the test sample can be secured or released by a simple twist of the clamp handle supplied with Kits A, D and F

Variable Impact Tester

Elcometer 1615

Variable Impact Tester Kits
The Elcometer 1615 Variable Impact Testers are designed to meet a wide range of National and International Standards.

Simply select the appropriate kit and attach the punch, die and accessories to the base unit.

Interchangeable dies - enable the user to match the die to the size of the relevant punch to conform to the required Standard or method.

Variable Impact Tester Accessories

The following range of accessories have been designed to help you evaluate the resistance of a coating to impact (elongation, cracking or peeling) when used in conjunction with the Elcometer 1615 Variable Impact tester.

Punches are universal and can be used either fitted to a falling weight or as a punch resting on the sample.

Concrete Inspection & Metal Detection

A covermeter, or rebar locator, is a gauge that measures the thickness of concrete cover over steel reinforcement bars and metal pipes. The covermeter can tell you the depth of the rebar, the location and orientation of reinforcement bar (rebar) and determine the diameter of the rebar.

A rebar locator is used to determine the presence and orientation of steel reinforcement rebars under the surface of the concrete.

A contractor engaged in maintenance work will be familiar with the problem of accurately locating the exact position of rebar, wall ties, studs and other metal fasteners. These low cost, simple to use gauges can meet their everyday requirements.

Test hammers are used to determine the surface hardness of concrete and are one of the most widely used instruments to assess concrete compressive strength. It is the quickest, simplest and least expensive method to obtain an estimate of the quality and strength of the concrete.

Test Hammers with both analogue and digital displays are available.

Many concrete structures have a protective or cosmetic coating. Premature failure of this coating can, at the very least, result in additional costs of rework.

Adhesion tests verify that both surface preparation and coating application are within specification

Concrete structures are porous and will absorb moisture, our range of moisture meters and climate monitoring gauges allows moisture content to be measured.

The range also includes gauges used for the measurement of crack width in concrete and other structures.

The Elcometer Metal Detection range includes Valve Box Locators that are rugged and simple to use making them the ideal choice for all location work in all types of terrain.

Concrete Inspection - Rebound Hammer

Elcometer 181

STANDARDS:
ASTM C805, BS 1881:202, DIN 1048, EN 12504-2, ISO 8045, NFP18-417, UNI 9189

Analogue Concrete Test Hammer

The concrete test hammer provides a quick, simple and inexpensive method for non-destructive evaluation of concrete compression strength and other masonry materials.

Concrete test hammers are one of the most widely used instruments in the field of non-destructive testing and Elcometer offer both mechanical and digital models

This gauge consists of a spring loaded plunger which, when released, strikes the surface with fixed and constant impact energy. During the rebound stroke, the mass moves a pointer that indicates the maximum point of return and at the same time indicates a reference value called Rebound Number.

This number, converted by the correlations available on the hammer, gives the compression resistance value in respect of the impact angle.

Key Features:

- Impact Energy 2.207 Nm
- Supplied with grinding stone to prepare test surface
- Aluminium body
- Rebound value indicated on test hammer
- Rebound value chart on body, for quick calculation of compressive strength
- Curve selection on chart dependant on testing angle

Technical Specification   C

Part Number	Description	Certificat
W181----1	Elcometer 181 Analogue Concrete Test Hammer - MPa / PSI Scale	○
Accuracy	Better than ±2 Rebound Number (When tested on Calibration Anvil at 80)	
Resolution	2 Rebound Number(s)	
Range	10 to 100 Rebound Number(s)	
Dimensions	Hammer: 280mm (11.02") length x 55mm (2.17") diameter In Case: 350mm (13.78") length x 80mm (3.15") diameter	
Weight	1.5kg (3.3lbs) with case	
Packing List	Elcometer 181 analogue concrete test hammer, plastic storage case, abrasive stone & operating instructions	

Accessories

○ Optional Calibration Certificate available

Digital Concrete Test Hammer

Elcometer 182

The Elcometer 182 Digital Concrete Test Hammer is equipped with an electronic transducer which converts the rebound values into a reading on the digital display. It displays a range of statistics with the option to download the data to PC.

The software and digital display are integrated into the design of the hammer.

- Light and easy to use
- High resolution and accuracy
- Possibility to store measurements and download data to PC
- Setting of test parameters and factors (age, shape, correction factors)
- Rapid and simple calibration procedure
- Selection of testing angle
- Selection of unit (N/mm^2, MPa, PSI, kgf/cm^2) Automatic conversion of rebound index to equivalent compression strength
- Selection between 7 different correlation curves between rebound index and compressive strength, 2 pre-set and 5 user definabl
- Statistical evaluation of test results (mean value, standard deviation, concrete strength estimation)
- Supplied with abrasive stone to prepare test surface
- Storage of up to 5,000 results
- RS 232 output to PC
- Rechargeable internal battery

STANDARDS:
ASTM C805, BS 1881:202, DIN 1048, EN 12504-2, ISO 8045, NFP18-417, UNI 9189

Deep Cover Search Head

Dual Search Head

Standard Search Head

Narrow Search Head

Covermeters & Half-Cell Meters

An easy to use gauge that quickly and accurately locates/orientates reinforcement bars and measures the depth of cover over the rebar.

Intuitive menus in multiple languages:
Clear on-screen instructions

Single handed operation:
All functions can be accessed & controlled through 4 simple keys on both the main unit and search head

Elcometer 331 Covermeter

International bar sizes:
User selectable bar sizes: Metric, US Bar Numbers, ASTM/Canadian and Japanese

Rechargeable battery supply:
Battery packs can be charged in the unit or externally

elcometer®

Covermeters & Half-Cell Meters

Elcometer 331

Designed to meet IP65 this rugged waterproof gauge can be used in the harshest of environments.

STANDARDS:
ACI 318, ASTM C876-91, BS1881:201, BS1881:204, BS8110, CP 110, DGZfP:B2, DGZfP:B3, DIN 1045, EC2, SIA 262, SS-EN 206, Concrete Society Technical Report 60, UNI 10174

Large, easy to read backlit display:
For easy viewing in dark environments

Fast and accurate:
Locate and determine orientation of rebar quickly, easily & accurately

Elcometer 331 Half-Cell Meter

Probe Storage Locator on base unit for portability

Ergonomically designed:
For ease of use and comfort

Concrete Inspection - Covermeter & Half-Cell

Elcometer 331   Covermeters & Half-Cell Meters

Elcometer have seven covermeters in their range, The Elcometer 331 H & HM are Half-Cell only instruments, the Elcometer 331 Model B is a Covermeter only and the Elcometer 331 Models BH, SH and TH incorporate the Half-Cell technology required to assess potential corrosion of rebar. Finally, the THD model can accurately locate stainless steel rebar.

User Friendly

- Easy to transport and store
- Ergonomically shaped case for comfort
- Single handed operation: All functions can be accessed & controlled through 4 simple keys/buttons

Accurate

- Locate and determine orientation of rebar quickly, easily & accurately
- Up to 240,000 readings can be stored on the gauge for detailed reporting*
- Memory and data logging with data output to PC or direct to printer*
- Graph Plotting allows an immediate visual indication of results

Reliable

- Stainless Steel rebars can be located by the THD Model
- Battery packs can be charged in the unit or externally. Additional batteries allow continued use

Tough

- Specifically designed for use on-sit
- Rugged, waterproof IP65 case provides protection against the elements.
- Backlit screen for viewing in dark environments

Efficient

- Rebar locator, concrete covermeter and half-cell measurement all available in a single gauge - (selected models)
- Intuitive menus enable each gauge to be used straight from the box

Powerful

- Links to CoverMaster™ software
- Ultimate data management tool to store cover & half cell readings and produce professional reports
- On Screen graphic display provides visual assessment of readings allowing identification of areas of low concrete cover or potential areas of corrosion

Elcometer 331 Covermeter

Power supply	7.4V battery pack provides up to 32 hours of continuous use (20 hrs if backlight is on). Rechargeable in 4 hours either inside or outside the gauge using an external charger.						
Operating temperature	0 to 50°C (32 to 120°F)						
Dimensions	230 x 130 x 125mm (9 x 5.1 x 4.9")			Weight	1.54kg (3.4lbs)		
Packing List	Standard Items: Rechargeable battery pack & charger (UK, US & EU), earphone, shoulder strap, plastic carry case & operating instructions. Model H & HM: Half Cell Meter, 25m extension cable on spool, 1.7m red rebar connecting cable with connecting clip & 1.7m black half-cell connecting cable. Model B: Concrete Covermeter, standard search head & search head connecting cable. Model BH, SH, TH & THD*: Concrete Covermeter with Half-Cell & search head connecting cable. Model HM, SH, TH & THD are also supplied with CoverMaster™ software and PC cable.						

* Search Heads and Half-Cell Probes are not included as standard and must be ordered separately

Concrete Inspection - Covermeter & Half-Cell

Elcometer 331

Covermeters & Half-Cell Meters

Cover Display Screen -

Alternative / Typical Data Review Screen View
- Backlit screens for use in dark conditions
- Easy to use menus, in multiple languages to enable access to all data needed whilst on site without constant reference to the instruction book
- Alternative view shows the typical display when using the deep cover search head
- Bar size and depth of cover can be input manually to suit specific requirements
- Typical data review screen clearly displays where readings are below or above a user specified tolerance, where a reading has not been take
- Units of measurement can be displayed in mm or inches for cover, or mV for Half Cell

Half-Cell Mode -

Typical Screen View

- Elcometer 331 Model BH/SH/TH/THD can read both Cover and Half-Cell Values
- Elcometer 331 Model B can read Cover Values only
- Data logging information displayed on screen
- Menu soft keys are visible in Elcometer 331 Model SH and TH

Graphics Plot Mode
- Half-Cell Mode - the gauge indicates the areas with the most potential for corrosion
- Covermeter mode - the gauge indicates the depth of cover
- Black indicates most potential for corrosion
- White indicates least potential for corrosion with varying greyscale shade in between
- Zoom feature allows the user to take a closer look at different areas that are of interest

Threshold View

- Ideal method for a simple pass or fail analysis
- Once the threshold value has been set, anything before the value is shown in black, while anything over the value is shown in white

elcometer®

Covermeters & Half-Cell Meters

Elcometer 331

Autosizing and orthogonal function

• Autosizing automatically estimates the size of rebar and the depth of cover

• If this estimated figure differs greatly from your expected rebar size or you do not know the expected rebar size, the orthogonal size function provides an accurate measurement of bar size

• The step by step directions for orthogonal function on the covermeter make the accurate sizing of bars quick and easy
Bar Size Dimensions

Selecting a bar size

Dimensions of reinforcement bars are stored in the covermeter and includes the following four standards bar series: Metric, US Bar, ASTM/Canadian and Japanese. Due to this wide selection of bar sizing, the Elcometer 331 Covermeters can be utilised worldwide with accurate results. When taking measurements for high tensile steel or Grades 304, 316 and Duplex Stainless Steel, details for the Bar Grade and Bar Size can be manually input into the covermeter, alternatively the gauge can be used in autosizing mode.

Metric		US Bar		ASTM/Canadian		Japanese	
Bar Size	Diam. (mm)	Bar Size	Diam. (Inch)	Bar Size	Diam. (mm^2)	Bar Size	Diam. (mm)

Concrete Inspection - Covermeter & Half-Cell

Elcometer 331

Covermeters & Half-Cell Meters
Data Logging Feature

• Simple Data Management on the Elcometer 331 Models SH, TH and THD

• The Elcometer 331 Model SH can store up to 10 batches of 1,000 cover or half-cell readings, with batch statistics, ready for evaluation and report generation using CoverMaster™ software package

• The Elcometer 331 TH and THD models have user defin ble memory batches with either linear or grid batch data logging modes. (Linear batching is where data is stored in a batch one reading after another)

• Grid batches allow data to be stored in a 'spreadsheet format' with each cell relating to the survey area typically mapped out on the structure prior to inspection. The grid batch feature facilitates fast surveying for both cover and half-cell readings. Problem areas that do not fall within specification can be immediately identified and marked directly on the concret

• Cover and half-cell readings can be recorded and 'overlaid' in each grid location

Powerful Statistics Feature

• Continually calculates and displays the statistical analysis of readings as they are taken. So, while the covermeter is in use, you are always informed and know exactly how your site survey is progressing

• Statistics values are also calculated for the readings within each batch and these values are stored in the batch along with all individual readings

---

The following statistics and values can be viewed and stored within the gauge:

Icon	Icon Meaning	Description
η	Number of readings	The running value for the number of readings taken in a group
$\bar{x}$	Mean	The average of a group of readings; the sum of the individual readings divided by the numbers of readings
σ	Standard deviation	A statistical measure of the spread of values in a group of readings
CV%	Coefficient of ariation	The standard deviation divided by the mean for a group of readings expressed as a percentage
↓ᵢₗₗ	Lowest Reading	The value of the lowest reading taken in a group of readings
↓ₗₗ	Highest Reading	The value of the highest reading taken in a group of readings
<<	Under Range	The number and percentage of readings under range
⊽ or <	Low Limit	The number and percentage of readings below the limit
⊢⊢	Within Limits	The number and percentage of readings within limits
⬆ or >	High Limit	The number and percentage of readings above the high limit
∞	Over Range	The number and percentage of readings over range (or infinite
⬜	Blank Readings	Number and percentage of blank readings (skipped/ not recorded /deleted)

elcometer

CoverMaster™ Software

Elcometer's CoverMaster™ software will manage your data efficientl   and effectivel .

Data is transferred quickly into the CoverMaster™ software data management system via RS232 connection. Both Covermeter and half-cell readings can be stored together with associated photographs, Word documents, Excel spreadsheets and other files

CoverMaster™ software is supplied free of charge with all Elcometer 331 models that have batch data storage.

Features:

- Data easily translated into a typographic view giving you all the information you need at a glance

- Data for each reading can be presented in colour or can be shown in greyscale, complete with reading values in each grid

- Site survey data from both cover and half cell measurements can be shown on the same typographic (or gradient) chart

- Reports can be fully customised allowing corporate logos, photos and memos to be added providing a fully comprehensive report for clients

- All survey information in one place, CoverMaster™ links directly with Excel™, Word™ and PowerPoint™ files, it is simple to analyse and assess your result

- CoverMaster™ - one platform for the storage of data, notes, photographs, PDF files for the creation of comprehensive report
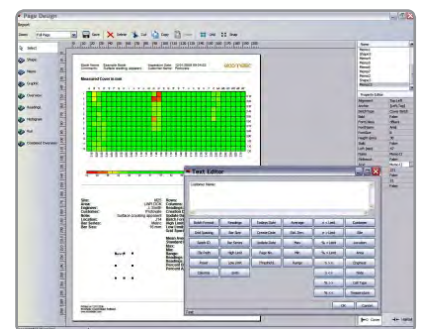

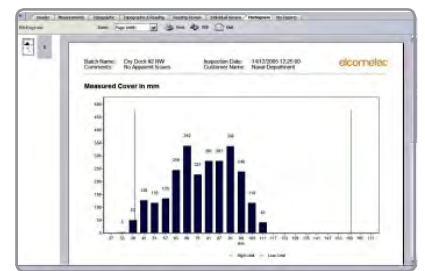

Concrete Inspection - Covermeter & Half-Cell

Elcometer 331   Accessories

For the Elcometer 331 BH, SH, TH and THD models, all search heads, the borehole probe and half-cell probes are fully interchangeable there is no requirement to return your gauge to Elcometer.

Elcometer 331 SH, TH and THD models are also supplied with CoverMaster™ & EDTS Excel link transfer software and PC Cable.

The Elcometer 331 Model B does not have half-cell capability and cannot be used with the half-cell probes.

Standard Search Head
Design to meet most of your measurement requirements.

Part Number	TW33119124-1A
Range	40mm / 1.6" bar 15mm to 95mm / 0.6" to 3.75" 8mm / 0.3" bar 8mm to 70mm / 0.3" to 2.75"
Dimensions	155 x 88 x 42mm / 6.1 x 3.5 x 1.65"
Sensing area	120 x 60mm / 4.72 x 2.36"

Narrow Pitch Search Head
Accurately measures the cover thickness when the gaps (pitch) between each of the rebars are close together.

Part Number	TW33119124-2A
Range	40mm / 1.6" bar 8mm to 80mm / 0.3" to 3.1" 8mm / 0.3" bar 5mm to 60mm / 0.2" to 2.4"
Dimensions	155 x 88 x 42mm / 6.1 x 3.5 x 1.65"
Sensing area	120 x 60mm / 4.72 x 2.36"

Deep Cover Search Head
The ideal search head for accurately measuring rebars that are deep within the structure.

Part Number	TW33119171A
Range	40mm /1.6" bar 35mm to 180mm / 1.4" to 7" 8mm / 0.3" bar 25mm to 160mm / 1" to 6.3"
Dimensions	170 x 94 x 54mm / 6.7 x 3.7 x 2.1"
Sensing area	160 x 80mm / 6.3 x 3.15"

Dual Search Head for high tensile and stainless steels
The search head specifically designed to locate High Tensile and Stainless Steel.

Part Number	TW33120014D
Range	40mm /1.6" bar 35mm to 180mm / 1.4" to 7" 8mm / 0.3" bar 25mm to 160mm / 1" to 6.3"
Dimensions	170 x 94 x 54mm / 6.7 x 3.7 x 2.1"
Sensing area	160 x 80mm / 6.3 x 3.15"

Concrete Inspection - Covermeter & Half-Cell

Accessories

Borehole Probe

The solution for locating tendon ducts and multiple layers of rebar lying deep within the concrete.

		Metric	Imperial
Part Number	Short	TW33119223-1A	TW33119223-3A
	Long	TW33119223-2A	TW33119223-4A
Measurement depth		Short Probe: 0 - 40cm / 0 - 16" Long Probe: 0 - 100cm / 0 - 40"	
Approximate detection ranges		Tendon duct (70mm / 2.75" diameter): up to 90mm / 3.54"	

Half-Cell Kit

Consisting of either a copper electrode in a copper sulphate solution or a silver electrode in a silver chloride solution, each half cell is a sealed unit - no need to mix chemicals. Supplied with a 25m / 80' cable, every half-cell probe is guaranteed for 5 years.

Part Number	TW331CUKIT	Copper/Copper Sulphate
	TW331AGKIT	Silver/Silver Chloride

Extension Cable 100m / 325ft

The extension cable for use with the half-cell kits gives the flexibility to take readings in difficult to reach area

Part Number	TW33119683

Verification Bloc

The verificatio block allows the user to check the calibration of their gauge in order to ensure maximum measurement accuracy.

Part Number	TW33119218

Extension Arm Kit

This kit allows the user to scan bridge decks and floor areas using the hand-held search heads from a standing position. Both the standard or narrow pitch search head can be attached to the extension arm.

Part Number	TW33119222
Concrete Inspection - Rebar & Stud Locators

Elcometer P100

Maximum Signal   Minimum Signal
'Imp' Rebar Locator

The Elcometer P100 is a robust and economical gauge designed to identify the location and orientation of reinforcement bars and metal pipes.

Mild steel and stainless steel galvanised wall ties can also be found with an optional search coil (or probe).

Simple to use, the Elcometer P100 is supplied in an ABS plastic carry case, together with a 100mm (4") search coil and batteries.

- Fast and accurate - gives a loud audible signal when the exact location of the rebar has been found
- Directional search field - distinguishes between horizontal and vertical bars – see diagram
- No need to re-zero - unaffected by moisture, temperature changes and electrical interference

Technical Specification

Part Number	Description
W100157A9D	Elcometer P100 Imp Rebar Locator
Packing List	Elcometer 100 Imp Rebar Locator, search head, 4 x LR6 (AA) batteries, leather carry case, operating instructions

Accessories

TW999198F	100mm (4") Directional Search Coil for Rebar
TW999198G	200mm (8") Hi-Depth Locator Search Coil - Short-handled (250mm)
TW999198H	200mm (8") Hi-Depth Locator Search Coil - Long-handled (650mm)

Detection Ranges For Single Reinforcement Bars

Rebar Diameter		Detection Depth	
mm	inches	mm	inches
8	0.32	90	3.5
16	0.63	100	3.9
32	1.25	110	4.3

elcometer

Concrete Inspection - Rebar & Stud Locators

Rebar Locator

Elcometer P120

The Elcometer P120 Rebar Locator provides a simple means to detect reinforcement bars in concrete, identifying the rebar's location, direction and an indication of the depth of concrete over the rebar.

Supplied together with a 100mm (4") search coil, leather carry case and batteries the Elcometer P120 is available in both metric and imperial versions.

• Fast, accurate and stable - Loud audio tone and clear analogue meter, with no need to re-zero the instrument during use

• High resolution controlled field search head - The strongest signal is in the centre of the search head making it accurate even when working at very close reinforcement bar centres or near metal objects, e.g. close to scaffolding or metal window frames

• Versatile - Supplied with a standard 100mm (4") head it will also accept a 150mm (6") head and a Borehole Probe for locating rebars and locating tendon ducts at great depths

• Rebar Plus rebar locators can quickly and easily distinguish between horizontal and vertical bars due to their highly directional detection fiel

• Clear Instrument Display - High quality meter shows signal strength and battery state

• Headphone socket - Clearly detect the rebar in noisy environments
Identification and Orientation of the ba

The Elcometer P120 can distinguish between horizontal and vertical bars. After locating the steel reinforcement bars in the concrete, rotate the rebar locator's search coil (probe) until the maximum and minimum signals are found. The maximum signal indicates the bar is running parallel to the search coil's handle, the minimum signal indicates that the bar is running at 90° to the search coil's handle – see diagram.

Maximum Signal   Minimum Signal

Part Number	Description
W120155I	Elcometer 120 Imp Rebar Plus Locator - Metric
W120155J	Elcometer 120 Imp Rebar Plus Locator - Imperial
Packing List	Elcometer 120 Imp Rebar Plus Locator, search head, 4 x LR6 (AA) batteries, leather carry case, operating instructions

Accessories

TW999165G	Probe Lead for Elcometer P120
TW999198F	100mm (4") Directional Search Coil for Elcometer P120
TW999198E	150mm (6") Extra-Depth Directional Search Coil for Elcometer P120

Detection Ranges For Single Reinforcement Bars

Rebar Diameter		Detection Depth		Resolution of Parallel Bars	
mm	inches	mm	inches	mm	inches
8	0.32	120	4.72	60mm pitch at up to 35mm	2.36" pitch at up to 1.37"
16	0.63	140	5.50	75mm pitch at up to 50mm	2.95" pitch at up to 1.97"
32	1.25	160	6.30	150mm pitch at up to 85mm	5.90" pitch at up to 3.35"

Metal Detection

Elcometer P130

Wall Tie & Stud Locator

The Elcometer P130 will rapidly and precisely locate mild steel or stainless steel wall ties and also make an excellent stud locator / stud detector.

This small, battery operated gauge has:

- High-impact ABS control unit in tough leather case
- Search coils encapsulated in epoxy resin for unmatched ruggedness
- Built-in loudspeaker for clear audio signal; Standard 3.5mm (0.14") stereo jack socket for headphones if required
- Single control button for on/off and sensitivity/backoff contr

Key Features:

- Fast and accurate - the strongest signal is in the middle of the search head making it easy to pin point the wall ties. A clear audio tone helps to identify the quick and precise location without the need to keep looking at the meter
- No need to re-zero - the Elcometer P130 is very stable in all weather conditions.
- Designed with the needs of the operator in mind - easy to use, built to last, supplied with leather case and shoulder strap
- Single Handed Operation - for safety and convenience when working on scaffold or ladders

Technical Specification

Part Number	Description
W130157B9D	Elcometer P130/D Wall-Tie Locator - Mild-Steel
W130157C9E	Elcometer P130/E Wall-Tie Locator - Mild & Stainless Steel with shoulder strap
Packing List	Elcometer P130/D: complete with 100mm (4") Locator Search Coil , Leather Case & Plastic Carry Case, 4 x LR6 (AA) batteries, operating instructions
	Elcometer P130/E: complete with 100mm (4") Locator Search Coil, 150mm (6") Stainless Steel Search Coil, Leather case with shoulder strap, Plastic Carry Case, 4 x LR6 (AA) batteries, operating instructions

Accessories

TW999198D	100mm (4") Locator Search Head
TW999198F	100mm (4") Directional Search Head - for Elcometer P130/D only
TW999198E	150mm (6") Stainless Steel Search Head - for Elcometer P130E only

Rebar & Wall Tie Locator

This fast, combined rugged gauge is supplied with three detector heads to determine both rebar and wall tie location and can also be used as an excellent stud locator / stud detector making it an extremely versatile instrument.

Supplied with two mild steel 100mm (4") search heads and an additional 150mm (6") search head which allows the gauge to locate phosphor-bronze, copper and some types of stainless steel* wall tie.

The Elcometer P150 can detect mild and stainless steel rebars, bed joint reinforcement, hoops irons, and can locate wiring in plaster walls.

- High-impact ABS control unit in a tough leather case

- Search coils encapsulated in epoxy resin for unmatched ruggedness

- Unit is switchable to detect or ignore stainless steel

- Single control button for on/off and sensitivity/back off contr

- Built-in loudspeaker for clear audio signals; Standard 3.5mm stereo jack socket for headphones if required

- Fast and accurate - Strongest signal is in the middle of the search head which makes it easy to pin point wall ties. A clear audio tone assists in the quick and precise location - no need to keep looking at the meter

- No need to re-zero

- Stable in all weather conditions

- Designed with the operator in mind, easy to use, single handed operation with leather carry case and shoulder strap for safety and convenience

Technical Specification

Part Number	Description
W150157E9E	Elcometer P150 Rebar Locator, Mild-Steel & Stainless-steel Wall-Tie Locator
Packing List	Elcometer P150/E, 100mm (4") Locator Search Coil, 100mm (4") Directional Search Coil, 150mm (6") Stainless Steel Search Coil, Leather Case with shoulder strap & Plastic Carry Case, 4 x LR6 (AA) batteries, operating instructions

Accessories

TW999198D	100mm (4") Locator Search Head for Elcometer P150
TW999198F	100mm (4") Directional Search Head for Elcometer P150
TW999198E	150mm (6") Search Head for Stainless Steel Wall-Ties

Approximate Detection Ranges

Mild Steel / Galvanised Fishtail Wall Ties (100mm/4" Search Head)	130mm (5.11")
Mild Steel / Galvanised Butterfly all Ties (100mm/4" Search Head)	130mm (5.11")
Stainless Steel Fishtail Wall Ties (with 150mm/6" Search Head)	80mm (3.15")

* Stainless steel does not give a strong signal. Please either send a drawing or ideally a sample of stainless steel wall tie you need to locate so we can test and advise as necessary.

Metal Detection

Elcometer P500

Metal Box Locator

Although originally designed to accurately locate valve boxes and manhole covers, the Elcometer P500 can also be used as a general metal detector. The Elcometer P500 is straight forward to use and very rugged making it a popular choice in the market.

Detecting metal objects to a maximum depth of 1m (39.4"), the Elcometer P500 has a number of key unique features:

- Strong focused search field ensures the accurate location of objects close to metal fencing and vehicles
- Ignores any ghost signals from cigarette packets, drinks cans and other metallic waste materials
- Manufactured from a single moulded design, in high impact ABS plastic, the Elcometer P500 stands up to a tough environment
- Balanced, lightweight unit with a single control button for ease of use
- Audio signal with headphone socket and an ultra-bright LED visual indicator identify when metal has been detected

Technical Specification

Part Number	Description
W500157F	Elcometer P500 Imp Box Locator
Overall Length	96cm (38")
Search Head Diameter	21cm (8")
Weight	1.1kg (2.5lb)
Power Supply	4 x 1.5V AA Cells or 4 x 1.5V NiMH Rechargeable Cells
Packing List	Elcometer P500 Imp Box Locator, 4 x LR6 (AA) batteries, operating instructions

Approximate Detection Ranges

Typical Object Type	Metric	Imperial
Stop Top Box	50cm	19"
Fire Hydrant Cover	87cm	34"
Inspection Cover	95cm	37"

Deep Cover Metal Detector

The Elcometer P520 Metal Detector is very high powered for increased depth detection.

Originally designed to locate water mains, pipes and cables, the Elcometer P520 is also the perfect choice for location work in cluttered areas and at depths where other metal detectors simply do not work.

- Deep-seeking and accurate - can locate a 100mm (4") metal water main at 1.20m (46") and unlike traditional metal detectors will locate valves even when the frame and cover are missing

- Unaffected by temperature changes or power lines - the Elcometer P520 water main locator is unaffected by changes in temperature and moisture, and the presence of overhead power lines (where normal tracing cannot be used)

- Stable and reliable - the Elcometer P520 does not need constant zeroing or recalibrating

- Clear Audio Signal – loudspeaker with a clear audio tone. In loud environments, simply connect headphones to the socket point

- Internal Battery – no need to find replacement batterie

Concrete Inspection

Elcometer 143
Crack Width Ruler

This simple gauge is designed specifically to provide inspectors with a low cost alternative to a graduated microscope when determining the width of a crack in concrete or other building materials.

Similar in size to a standard credit card, this transparent gauge is marked with a range of graded line. Each line is a specified width

To use, position the gauge over the crack and identify which line is a similar width to the crack. Read off the width value

Appendix

What is the correct probe for each Coating/Substrate?

The table below shows common coating/substrate combinations. If you do not see your coating/substrate combination, please contact Elcometer to discuss your particular requirement.

Elcometer offers a free Test Sample Report. Contact us to arrange for our Technical Department to establish the most appropriate gauge for your process or application.

	SUBSTRATE									
COATING	Aluminium	Brass	Bronze	Copper	Steel	Magnesium	Stainless Steel	Titanium	Uranium	Zinc
Aluminium	-	-	-	-	F	-	-	-	-	-
Anodising	NF	-	-	-	-	NF	-	-	-	-
Brass	-	-	-	-	F	-	-	-	-	-
Bronze	-	-	-	-	F	-	-	-	-	-
Cadmium	-	-	-	-	F	-	-	-	-	-
Ceramic	-	-	-	-	F	-	-	-	-	-
Chrome (Hard)	NF*	-	-	NF*	F	-	-	-	-	-
Copper	-	-	-	-	F	-	-	-	-	-
Eloxal	NF	-	-	-	F	-	-	-	-	-
Epoxy	NF	NF	NF	NF	F	-	NF	NF	-	NF
Galvanising	-	-	-	-	F	-	-	-	-	-
Lacquer	NF	NF	NF	NF	F	-	NF	-	-	NF
Metal Spray	-	-	-	-	F	-	-	-	-	-
Molybenum Disulphide	-	-	-	-	F	-	NF	-	-	-
Nickel (Electroless)	NF*	NF*	-	NF*	F	-	-	-	-	-
Paint	NF	NF	NF	NF	F	NF	NF	NF	NF	NF
Plastic	NF	NF	NF	NF	F	NF	NF	NF	NF	NF
Plating	-	-	-	-	F	-	-	-	-	-
Rubber	NF	-	-	-	F	-	-	-	NF	-
Resist	-	-	-	NF	-	-	-	-	-	-
Tin	-	-	-	-	F	-	-	-	-	-
Varnish	NF	NF	NF	NF	F	-	-	-	-	-
Zinc	-	-	-	-	F	-	-	-	-	-

NF : use Non-Ferrous probe
F : use Ferrous probe
* : known sample required for calibration
